Mechanics

FLUID MECHANICS AND ITS APPLICATIONS
Series Editor: R. Moreau

Aims and Scope of the Series
The purpose of this series is to focus on subjects in which fluid mechanics plays a fundamental role. As well as the more traditional applications of aeronautics, hydraulics, heat and mass transfer etc., books will be published dealing with topics which are currently in a state of rapid development, such as turbulence, suspensions and multiphase fluids, super and hypersonic flows and numerical modelling techniques. It is a widely held view that it is the interdisciplinary subjects that will receive intense scientific attention, bringing them to the forefront of technological advancement. Fluids have the ability to transport matter and its properties as well as transmit force, therefore fluid mechanics is a subject that is particularly open to cross fertilisation with other sciences and disciplines of engineering. The subject of fluid mechanics will be highly relevant in domains such as chemical, metallurgical, biological and ecological engineering. This series is particularly open to such new multidisciplinary domains.

Aims and Scope of the Series

The fundamental questions arising in mechanics are: Why?, How?, and How much? The aim of this series is to provide lucid accounts written by authoritative researchers giving vision and insight in answering these questions on the subject of mechanics as it relates to solids. The scope of the series covers the entire spectrum of solid mechanics. Thus it includes the foundation of mechanics; variational formulations; computational mechanics; statics, kinematics and dynamics of rigid and elastic bodies; vibrations of solids and structures; dynamical systems and chaos; the theories of elasticity, plasticity and viscoelasticity; composite materials; rods, beams, shells and membranes; structural control and stability; soils, rocks and geomechanics; fracture; tribology; experimental mechanics; biomechanics and machine design.

From 1990, books on the subject of mechanics will be published under two series:

**FLUID MECHANICS AND ITS APPLICATIONS**
*Series Editor: R.J. Moreau*

**SOLID MECHANICS AND ITS APPLICATIONS**
*Series Editor: G.M.L. Gladwell*

Prior to 1990, the books listed below were published in the respective series indicated below.

**MECHANICS: DYNAMICAL SYSTEMS**
*Editors: L. Meirovitch and G.A.E. Oravas*

**MECHANICS OF STRUCTURAL SYSTEMS**
*Editors: J.S. Przemieniecki and G.A.E. Oravas*

Mechanics

MECHANICS: ANALYSIS
Editors: V.J. Mizel and GÆ. Oravas

MECHANICS: COMPUTATIONAL MECHANICS
Editors: M. Stern and GÆ. Oravas

MECHANICS: GENESIS AND METHOD
Editor: GÆ. Oravas

MECHANICS OF CONTINUA
Editors: W.O. Williams and GÆ. Oravas

Mechanics

MECHANICS OF FLUIDS AND TRANSPORT PROCESSES
Editors: R.J. Moreau and G.Æ. Oravas

MECHANICS OF ELASTIC STABILITY
Editors: H. Leipholz and G.Æ. Oravas
