1 Introduction	1
1.1 Introduction	1
1.2 India's capital markets	4
1.3 Overview of Indian financial sector reforms	5
1.4 Inflows into India's capital markets	8
1.5 Purpose of study	9
1.6 Plan of study	11
2 Internal Finance as a Source of Investment: Managerial/Principal Agent or Asymmetric Information Approach?	13
2.1 Introduction	13
2.2 Asymmetric information approach to investment	14
2.3 Managerial/principal agent theory of investment	16
2.4 Managerial/principal agent vs. asymmetric information: some empirical facts	18
2.5 Further issues	21
3 Cash Retention Strategies: Test of Free Cash Flow Theory	23
3.1 Introduction	23
3.2 Purpose	24
3.3 Theories on excess cash flow	25
3.3.1 Basic assumptions	25
3.3.2 Free cash flow theory: dividend recommendation	26
3.3.3 Dividend signalling model	28
3.3.4 Free cash flow theory: debt recommendation	29
3.3.5 Empirical evidence for the free cash flow theory	30
3.3.6 Free cash flow theory and takeovers	31
3.4 Asymmetric information, imperfect capital markets and the 'Flight to Quality'	31
3.4.1 Imperfect capital markets: the lemons problem	32

3.4.2	Imperfect capital markets: credit rationing	33
3.4.3	Internal vs. external finance: asymmetric information costs and intermediation	34
3.4.4	Banking relationships and the asymmetric information problem	35
3.5	Free cash flow theory effects vs. benefits of free cash flow	36
3.5.1	Asymmetric information in the free cash flow theory framework	36
3.5.2	Financial flexibility and its benefits	37
3.5.3	Excess cash strategies	38
3.5.4	Finance hierarchies	39
3.5.5	Tax and the finance hierarchy	40
3.5.6	Using excess cash as collateral	40
3.5.7	An example of financial fragility and the use of debt	42
3.6	Financial transmission to real economic activity	43
3.6.1	Mechanisms with real economic consequences: the lending channel	43
3.6.2	Financial investment accelerator	46
3.6.3	Inventory response and firm size	46
3.6.4	Investment effects on the macroeconomic level	47
3.7	Firm model comparing earnings retention, re-investment, and external borrowing	48
3.7.1	Expected return of the earnings retention strategy	51
3.7.2	Expected return of the earnings disbursement strategy	51
3.7.3	Comparison of returns	52
3.7.4	Estimating benchmark cases for the model	56
3.7.5	The model's incorporation of the free cash flow theory	62
3.7.6	The premium ϕ : costs of asymmetric information	62
3.7.7	The case of recessions and booms	64
3.8	Empirical examination of earnings retention	66
3.8.1	Foundations for empirical investigation	66
3.8.2	Examining actual firm investment behaviour	67
3.8.3	Examination of past evidence from excess cash predictions	71
3.8.4	Regression of investment after monetary contraction	74
3.8.5	Formula for retained earnings	75
3.9	Conclusion	80

4	The Cost of Capital: Earnings Retention vs. Leverage	82
4.1	Introduction	82
4.2	Background	83
4.2.1	Institutional characteristics of financial markets in India	83
4.2.2	Capital structure: theory	87
4.3	Financing hierarchies	88
4.4	Target leverage models	90
4.5	Agency costs of leverage	91
4.6	Research methodology	93
4.6.1	Data	94
4.6.2	Statistical model	94
4.6.3	Estimation	97
4.7	Results	97
4.7.1	Discussion	101
4.8	Leverage and profitability	102
4.8.1	Theory	103
4.9	Research methodology and data	103
4.9.1	Data	103
4.9.2	Statistical model	105
4.10	Results	106
4.10.1	Evaluation	110
4.11	Policy Implications	110
4.12	Conclusion	112
5	Earnings Retention as a Specification Mechanism in Predicting Corporate Bankruptcy	114
5.1	Introduction	114
5.2	Bankruptcy management in India: <i>SICA</i> and <i>BIFR</i>	115
5.3	Firm and capital structure management	117
5.3.1	Alignment of managerial incentives	117
5.4	Bankruptcy effects of corporate leveraging in Indian firms	120
5.5	Corporate bankruptcy procedures in India	124
5.5.1	Treatment of bankruptcy by India's financial sector	124
5.5.2	Bargaining power between banks and firms	123
5.5.3	The public interest: subsidies, sacrifices, and accounting practices	126
5.5.4	Violations of the 'absolute priority rule'	129
5.6	Earnings retention in logistic bankruptcy models: test of the free cash flow theory	132

5.6.1	Introduction	132
5.6.2	Purpose	133
5.6.3	Background	133
5.6.3.1	Review of the free cash flow theory	133
5.6.3.2	Previous studies on bankruptcy models	134
5.6.4	Research methodology and data	136
5.6.4.1	Financial ratio selection	136
5.6.4.2	Statistical model	137
5.6.4.3	Data	137
5.6.5	Results	139
5.6.5.1	Evaluation	143
5.6.5.2	Discussion	144
5.7	Policy implications of reforms in Indian bankruptcy proceedings	146
5.8	Conclusion	149
6	Factors Affecting the Market for Corporate Control: The Role of Excess Cash, Diversification, and Predation during Mergers and Acquisitions	151
6.1	Introduction	151
6.2	Takeover policy in India	153
6.3	Signalling effects of earnings retention and diversification on bidder and target returns during acquisition activity	155
6.3.1	Introduction	155
6.3.2	Purpose	156
6.3.3	Background	157
6.3.3.1	Takeovers within the free cash flow theory	157
6.3.3.2	Determinants of successful takeovers	158
6.3.4	Research methodology and data	159
6.3.5	Results	161
6.3.5.1	Abnormal returns	161
6.3.5.2	Cross section regressions	164
6.3.5.3	Evaluation	167
6.3.5.4	Discussion	168
6.4	Using the financial structure of firms as a signalling mechanism against takeovers	169
6.4.1	Introduction	169
6.4.1.1	Background	169
6.4.2	Theory	169
6.4.2.1	Predation	169

6.4.2.2	Literature Review: Long-purse predation, signalling and contracting	170
6.5	Basic model of no-predation contracting	175
6.6	Further issues	179
6.7	Conclusion and policy implications	180
7	Conclusions	182
7.1	Conclusion	182
7.2	Summary of findings	183
7.2.1	Internal finance as a source for investment	183
7.2.2	Examination of cash retention strategies	183
7.2.3	Effects and determinants of debt	184
7.2.4	Use of earnings retention in predicting corporate bankruptcy models	186
7.2.5	Factors affecting the market for corporate control	186
7.3	Limitations of study and future work	187
7.4	Further policy implications	188
	<i>Appendix 1. Derivation of model constraints</i>	191
	<i>Appendix 2. Deriving the relationship between investment probability and ϕ</i>	193
	<i>Notes</i>	195
	<i>Bibliography</i>	202
	<i>Index</i>	212

List of Tables

1.1	Mumbai stock exchange indicators	8
1.2	Foreign investment inflows	8
3.1	Comparison of strategy – expected returns	
3.2	Model's three cases	53
3.3	Model predictions when model variables are increased	54
3.4	Summary of case studies: assumptions and modifications	56
3.5	Firm strategies during stable conditions	57
3.6	Firm strategies during recession	65
3.7	Firm strategies during boom	65
3.8	Distribution of firms in non-financial sector	65
3.9	Distribution of non-financial firms disbursing dividends	68
3.10	Distribution of non-financial firms' retaining earnings	68
3.11	Distribution and means of non-financial firms' relative dividends	69
3.12	Distribution and means of non-financial firms disbursing retained earnings	70
3.13	Results of regression for investment with 1979 data	71
3.14	Results of regression for investment, 1979 (high q firms)	72
3.15	Results of regression for investment, 1979 (low q firms)	73
3.16	Results of regression for investment, 1982–3 (high q firms)	74
3.17	Results of regression for investment, 1982–3 (low q firms)	74
3.18	Results of regression for retained earnings	76
3.19	Formula predictions for small and large firms	77
3.20	Results of regression for retained earnings including year variable	77
3.21	Results of regression for retained earnings including GNP growth rate	78

3.22	Formula predictions for small and large firms given state of economy	79
4.1	Financial development ratios	87
4.2	Results of leverage model	98
4.3	Distribution of high q /low q firms	104
4.4	Distribution of high q /low q firms with excess retained earnings and debt holdings	105
4.5	Regressions of high q /low q firms	107
4.6	Regression of low q firms with excess debt and excess retained earnings	108
4.7	Regressions of high q firms with excess debt and excess retained earnings	109
5.1	Distribution of petitioned cases before the BIFR, 1987-92	116
5.2	Interest cost per unit sales, engineering firms, 1970-89	123
5.3	Interest cost per unit sales, textile firms, 1970-89	123
5.4	Bargaining power: bank returns for leveraged firms	124
5.5	Rates of return for firms under section 18(4)	131
5.6	Liquidation values of assets (Wilcox)	136
5.7	Industry-relative ratios tested for analysis	137
5.8	Distribution of textile firms	139
5.9	Results for entire sample	140
5.10	Results for high q firms	141
5.11	Results for low q firms	142
5.12	Results for small low q firms	143
5.13	Classification accuracy one year prior to bankruptcy	144
6.1	Distribution of target firms	160
6.2	Distribution of bidder firms	160
6.3	Distribution of firms as classified by high free cash flow and low financial slack	161
6.4	Target, bidder, and total abnormal returns for high q and low q firms	162
6.5	Target, bidder, and total abnormal returns for all takeovers and based on type of acquisition	164
6.6	Regressions of target, bidder, and total abnormal returns on q characteristics	165

6.7	Regressions of target, bidder, and total abnormal returns on q characteristics, free cash holdings, and type of target	166
-----	--	-----

List of Figures

2.1	Dividend yield vs. stock price in India, 1987–93	22
3.1	IS-LM depiction of the lending channel	44
3.2	Model for earnings retention	50
3.3	Firm size and external finance premium (ϕ)	51
3.4	Relationship between P and the premium for Case 1	58
3.5	Modified breakeven curve	59
3.6	Relationship between P and premium for Case 2	61
4.1	Industry average debt/equity ratio	86
4.2	Expected leverage for different firm values	100
4.3	Factors affecting leverage	101
5.1	Debt/equity ratio: textiles, measurement A	121
5.2	Debt/equity ratio: textiles, measurement B	121
5.3	Debt/equity ratio: engineering, measurement A	122
5.4	Debt/equity ratio: engineering, measurement B	122
5.5	Comparison of excess write-off on debt and projected rates of return on equity	132
5.6	Plot of estimated probabilities as functions of RE/TA using low q /high q firms	145

Acknowledgements

This book has benefited from comments, assistance and insights from many people who have helped in one way or another. I would like to begin by thanking Ajit Singh for discussing many of the ideas developed in this study. Our ‘talks’ have been a constant source of inspiration to me. I thank him most of all for being a great listener and friend during the past few years. I would also like to thank Alister McFarquhar and Robert Cassen who encouraged me to undertake this study from the start. I am equally grateful for the continuous support I received from my colleagues while working in Washington, DC, including Judith Brandsma, Nemat Shafik (World Bank) and Susan Fennell (International Monetary Fund).

Special thanks are due to Boyle, Achilles, P, Gere, Daphne, Brenty, the ‘Tailors’, Tom, Ms Slattery, Noha, Bryan, Craig, Al, and Tony, whose support throughout this study have meant a lot to me. I would also like thank all of my family and friends who believed in me throughout the years. Their encouragement has and always will be very important to me. Lastly, I would like to thank the Policy and Analysis Group at the Federal Reserve Bank of New York for encouraging me to complete this book.

The views expressed in this book are entirely those of the author and should not be attributed in any manner to the Federal Reserve Bank of New York or the Federal Reserve System.

Every effort has been made to contact all copyright-holder for material used in this book, but if any have been inadvertently omitted the publishers will be pleased to make the necessary arrangement at the first opportunity.
