Preface

João O. Malva, Ana C. Rego, Rodrigo A. Cunha, and Catarina R. Oliveira

Recent years witness the amazing and enthusiastic growth of research activity dedicated to understand the complex mechanisms of interaction between neurons and glia in brain physiology and the involvement of these processes in brain dysfunction and pathology. Neuroscientists and neuroimmunologists face the major challenge of bringing to light new knowledge about the functional interplay of brain cellular partners. There is now a better understanding of the basic physiopathological processes of many diseases of the nervous system, including the role of inflammation and immune mechanisms. New powerful tools were shown to interfere with the “recital” of cytokines, chemokines and inflammatory molecules and their dynamic effects on neurons, glia, vascular cells and cells of the immune system that invade the brain parenchyma in response to injury. The ultimate goal of this area of research is to develop new therapeutical approaches and to find a cure for the devastating disorders of the nervous system to which inflammation and immune contributions were demonstrated to be key players.

This project was born after joining efforts from expert contributors in neuron–glial cross-talk in health and disease. We are grateful for the efforts of the contributors in this book. The aim of editors is to foster understanding on the mechanisms of brain injury and how they can be modulated to overcome irreversible damage resulting in a better quality of life. There is still much work to be done, but there are reasons to be optimistic.

We hope you will find this book interesting and informative.

Welcome to “Interaction Between Neurons and Glia in Aging and Disease”

The Editors

University of Coimbra, December 1, 2006
Acknowledgements

Special thanks to
All colleagues contributing to the present book.

The colleagues working at “Neuroprotection and Neurogenesis in Brain Repair”,
“Mitochondrial dysfunction” and “Purines at CNC” groups.

The Center for Neuroscience and Cell Biology, University of Coimbra and to the Portuguese Society for Neuroscience.

Bruno Manadas for his enthusiastic collaboration with figures and animations in the accompanying DVD.
Contents

Section 1  Neuroimmunity and neuroinflammation ..................................................  1
    João O. Malva and Catarina R. Oliveira

Chapter 1.  Inflammation and Neuronal Susceptibility to Excitotoxic Cell Death...........  3
    Liliana Bernardino and João O. Malva

    M. Wirenfeldt, L. Dissing-Olesen, A.A. Babcock, R. Ladeby,
    M.B. Jensen, T. Owens and B. Finsen

Chapter 3.  Opposite Modulation of Peripheral Inflammation and Neuroinflammation
    by Adenosine A2A Receptors .........................................................................  53
    Rodrigo A. Cunha, Jiang-Fan Chen and Michail V. Sitkovsky

Chapter 4.  Subventricular Zone Cells as a Tool for Brain Repair .............................  81
    Fabienne Agasse, Liliana Bernardino and João O. Malva

Section 2  Signaling and inflammation in aging ....................................................  109
    Rodrigo A. Cunha

Chapter 5.  Neuron-Glia Interaction in Homeostasis of the Neurotransmitters
    Glutamate and GABA ....................................................................................  111
    Arne Schousboe and Helle S. Waagepetersen

Chapter 6.  The Impact of an Imbalance Between Proinflammatory and
    Anti-inflammatory Influences on Synaptic Function in the Aged Brain...........  121
    Marina Lynch

Chapter 7.  Neurotrophin Signaling and Cell Survival ..............................................  137
    Bruno J. Manadas, Carlos V. Melo, João R. Gomes
    and Carlos B. Duarte

Chapter 8.  GDNF: a Key Player in Neuron-Glia Crosstalk and Survival
    of Nigrostriatal Dopaminergic Neurons ......................................................  173
    Emília P. Duarte, Ana Saavedra and Graça Baltazar
Chapter 9. Molecular Pathways of Mitochondrial Dysfunction in Neurodegeneration: the Paradigms of Parkinson’s and Huntington’s Diseases ........................................ 193
Ana Cristina Rego, Sandra Morais Cardoso and Catarina R. Oliveira

Chapter 10. Zinc Homeostasis and Brain Injury ............................................................... 221
Stefano Sensi, Erica Rockabrand and Israel Sekler

Chapter 11. Aging and Cognitive Decline: Neuroprotective Strategies ..................... 245
Frederico Simões do Couto and Alexandre de Mendonça

Section 3 Neurodegeneration and inflammation in age related diseases .............. 269
Ana Cristina Rego and Catarina R. Oliveira

Chapter 12. Inflammation and Apoptotic Pathways in the Peripheral Nervous System
Related to Protein Misfolding........................................................................ 271
Maria João Saraiva

Chapter 13. Neuroinflammation and Excitotoxicity in Neurobiology of HIV-1
Infection and AIDS: Targets for Neuroprotection......................................... 281
Marcus Kaul and Stuart A. Lipton

Chapter 14. Neuroinflammation and Mitochondrial Dysfunction in Alzheimer’s
and Prion’s Diseases ................................................................................. 309
Paula Agostinho and Catarina R. Oliveira

Chapter 15. Metal Ions and Alzheimer’s Disease ....................................................... 333
Paul A. Adlard and Ashley I. Bush

Chapter 16. Epilepsy, Brain Injury and Cell Death ..................................................... 363
 Günther Sperk, Meinrad Drexel, Ramon Tasan and Anna Wieselthaler

Chapter 17. Glia and Hippocampal Neurogenesis in the Normal, Aged
and Epileptic Brain .................................................................................. 375
William P. Gray and Alexandra Laskowski

Chapter 18. Polyglutamine Expansion Diseases – the Case
of Machado-Joseph Disease........................................................................ 391
Sandra Macedo-Ribeiro, Luís Pereira de Almeida,
Ana Luísa Carvalho and Ana Cristina Rego

Chapter 19. Remyelination of the Central Nervous System ..................................... 427
Charlotte C. Bruce, Robin J. M. Franklin and João B. Relvas

Chapter 20. Adult Neurogenesis in Neurodegenerative Diseases ......................... 445
Tomas Deierborg, Jia-Yi Li and Patrik Brundin
Contents

Chapter 21. ATP Receptors in the Pain Signaling: Glial Contribution in Neuropathic Pain................................................................. 461

Kazuhide Inoue

Chapter 22. Diabetic Retinopathy, Inflammation, and Proteasome ................................................. 475

António F. Ambrósio, Paulo Pereira and José Cunha-Vaz

Chapter 23. Rejuvenating Neurons and Glia with Microbial Enzymes ................................. 503

Aubrey D.N.J. de Grey

Abbreviations ................................................................................................................... 511

Index .................................................................................................................................. 513
