University of Cincinnati

Cincinnati, Ohio, USA

Drawing on both leading and emerging scholars of environmental communication, the Palgrave Studies in Media and Environmental Communication Series features books on the key roles of media and communication processes in relation to a broad range of global as well as national/local environmental issues, crises and disasters. Characteristic of the cross-disciplinary nature of environmental communication, the books showcase a broad variety of theories, methods and perspectives for the study of media and communication processes regarding the environment. Common to these is the endeavour to describe, analyse, understand and explain the centrality of media and communication processes to public and political action on the environment.

## ACKNOWLEDGEMENTS

The authors acknowledge and thank the journalists and experts who agreed to be interviewed for this research. We are most grateful for the interest and gentle steering of the series editors Anders Hansen and Steve Depoe. We also thank Sophie Auld at Palgrave Macmillan for guiding this volume through to publication. The enthusiasm and talent of our research assistants was essential to the completion of this project. We thank Alan Jone Alves, Heloisa Aruth Sturm, Jorge A. Baquero, Laura Gaitan Daza, Corinne Mulvanerton, Elizabeth Suarez, Sandeep Varry and Rodrigo Zamith for their dedication and good cheer through long weeks of painstaking work. Our love and thanks go to the Pinto family, Jonathan Crist, and Luis Lopez-Preciado for their patience and steadfast encouragement.

Most of the content in [Chapter 5](#) previously appeared in the journal *Global Media and Communication*, April 2016; vol. 12(1): pp. 3–23, published by SAGE Publications Ltd. The work that went into that chapter evolved through presentations at the annual conferences of the International Association of Media Communication Researchers, where it benefitted from the feedback of many colleagues.

We acknowledge the support of our academic institutions, Florida International University and Roger Williams University, which encourage our research efforts and introduce us to students who inspire us to grapple with the environmental challenges that confront us all. This research was made possible by grants from the Foundation to Promote Scholarship and Teaching at Roger Williams University and the Summer Research Award at the School of Journalism & Mass Communication at Florida International University. Thanks also go to the University of

Miami School of Communication, where the seeds of this journey were first planted. Special thanks to the staff at Palgrave and the reviewers who provided important feedback that guided our work.

This book is dedicated to everyone who works to tell the stories of the interfaces of environment and society in an age of accelerating climate change and on-going environmental degradation. May your voices be raised and heard.
