M. J. ROSSER

Foreword

By Baroness Secar

Anyone who proposes to give a lecture or write an article on equal opportunity for women should get hold of this book, especially if the author intends, as so many authors do, to make comparisons between the position in the United Kingdom and in the United States of America. The extensive collection of statistics and tables provides answers to many of the questions that discussion on this subject inevitably raise and the impressive bibliography points the way to further study.

It is the work of economists, not of sociologists, and the intention of the authors is to examine the statistical evidence for the many statements made about the causes and extent of inequality and the progress, or lack of it, in the drive towards equality. As such it is a valuable corrective to many less soberly based presentations of the subject.

As a bonus, the book finishes with a Marxian analysis of sex equality.

NANCY SEEAR
