

OR Essentials

Series editor
Simon Taylor
Brunel University
Uxbridge, United Kingdom

The OR Essentials series presents a unique cross-section of high quality research work fundamental to understanding contemporary issues and research in across a range of Operational Research (OR) topics. It brings together some of the best research papers from the esteemed Operational Research Society and its associated journals, also published by Palgrave Macmillan. OR deals with the use of advanced analytical methods to support better decision making. As a multidisciplinary field, it has strong links to management science, decision science, computer science and has practical applications in areas such as engineering, manufacturing, commerce, healthcare and defence. OR has longstanding historical roots. However, as a modern discipline it arguably started during World War II when mathematical techniques were being developed to support the war effort. Now it is common place and a key discipline taught in universities across the world, at undergraduate and postgraduate levels. There are several international societies dedicated to the advancement of OR (e.g. the Operational Research Society and INFORMS The Institute for Operations Research and the Management Sciences) and there are many high quality peer-review journals dedicated to the topic. The OR Essentials books are a vital reference tool for students, academics, and industry practitioners, providing easy access to top research papers on the most cutting-edge topics within the field of Operational Research.

List of Figures

Resetting the Clock: A Feedback Approach to the Dynamics of Organisational Inertia, Survival and Change

Fig. 1	Structural inertia theory as a series of individual propositions	37
Fig. 2	A positive feedback loop which increases (or decreases) inertia	39
Fig. 3	A negative feedback loop which controls the growth of inertia	40
Fig. 4	Complete conceptual feedback diagram of structural inertia	41
Fig. 5	The formulation of inertia in the model	43
Fig. 6	Two examples of graph functions in the model, (a) the relationship between size and inertia, and (b) the relation between age and inertia	44
Fig. 7	The formulation of pressure for change and change attempts in the model	45
Fig. 8	The formulation of reliability	46
Fig. 9	The formulation of organisational experience and size	47
Fig. 10	The complete model	48
Fig. 11	Results from a 20 period simulation	52
Fig. 12	Results from a 100 period simulation	53
Fig. 13	The effect of time pressure on inertia and experience	56

Management Attitudes, Learning and Scale in Successful Diversification: A Dynamic and Behavioural Resource System View

Fig. 1	Investment in the core by FocusCo and feedback consequences	72
Fig. 2	Investment in the non-core by DiversiCo and feedback consequences	73

x **List of Figures**

Fig. 3	FocusCo's strategic resources and investment policy for the core	75
Fig. 4	DiversiCo's assets and investment policy for the non-core	78
Fig. 5	A thought experiment—a 20% permanent downturn in tyre demand and the financial consequences for FocusCo	83
Fig. 6	FocusCo's response to a sustained downturn; reduced investment and downsizing to boost return	85
Fig. 7	The attraction of diversification following a downturn in the core	87
Fig. 8	Comparing strategic performance of DiversiCo and FocusCo in the core	88
Fig. 9	Comparing financial performance of DiversiCo and FocusCo following a downturn in the core	89
Fig. 10	'Excess' diversification fuelled by over-optimism	91
Fig. 11	Managerial confidence and learning and their effect on growth of the non-core and market share of the core	94

Relevance Assumed: A Case Study of Balanced Scorecard Development Using System Dynamics

Fig. 1	Causal loop diagram of key interdependencies	116
Fig. 2	Stocks-and-flows diagram for cases	120
Fig. 3	Stocks-and-flows diagram for employees	121
Fig. 4	Work pressure, throughput time and employee productivity over time	124
Fig. 5	Delays in increasing hiring rates in response to increased demand rate	124
Fig. 6	Effect of outsourcing on work pressure	125
Fig. 7	The effect of installing a high-quality intake process	127

Interpersonal Success Factors for Strategy Implementation: A Case Study Using Group Model Building

Fig. 1	Causal loop diagram for group 2 'What are the factors that influence New Zealand's export opportunities in the food and fibre sectors?'	141
--------	---	-----

An Overview of Strategy and Tactics in System Dynamics Optimization

Fig. 1	Rapid convergence of the objective function during optimization	172
Fig. 2	Comparison of reported quarterly incidence data with model generated data	174
Fig. 3	Two Gompertz curves fitted to the Dutch data on car registrations	181

Fig. 4	Production and inventory variables obtained from two different optimization methods	182
Fig. 5	Comparison of objective functions derived from two different optimization methods	183
Fig. 6	Three policy variables optimized against the sales data	185
Fig. 7	Objective functions arising from optimization of the aggregate production planning model using separate modelling methods	186
Fig. 8	Model of AIDS spread optimized to the United Kingdom data	188
Fig. 9	Support for the hypothesis of a U-shaped infectivity profile in the natural history of HIV	189

Simulation by Repeated Optimisation

Fig. 1	The concept of hill-climbing optimisation	200
Fig. 2	Continuing to search	203
Fig. 3	Influence diagram for optimisation illustration	204
Fig. 4	Basic behaviour of the simple model (base case)	205
Fig. 5a	Optimisation of the simple model (a) Optimisation of four parameters	208
Fig. 5b	Optimisation of the simple model (b) Optimisation of three parameters	209
Fig. 5c	Optimisation of the simple model (c) Higher stocks	210
Fig. 6	Response slope for constrained optimisation	212
Fig. 7	Simplified influence diagram for Heroica's defence strategic planning model	215

Judgement and Supply Chain Dynamics

Fig. 1	Factors impinging on the bullwhip effect	226
Fig. 2	Supply-chain model structure in this study	230
Fig. 3	SES and factory stock response to adjustments	233
Fig. 4	Stock and flow diagram of the home (<i>H</i>) supply-chain model sectors, <i>AaA</i>	237
Fig. 5	Stock and flow diagram of the home (<i>H</i>) supply-chain model sectors, (<i>s</i> , <i>S</i>)	238
Fig. 6	Stock and flow diagram of the home (<i>H</i>) supply-chain model sectors, <i>utS</i>	240
Fig. 7	Computing the factory stock amplification ratio (<i>FSAR</i>)	242
Fig. 8	<i>FSAR</i> results of client, home and factory sector forecast adjustments, with <i>mixed</i> optimism (<i>O</i>) and pessimism (<i>P</i>), under the <i>AaA</i> , (<i>s</i> , <i>S</i>) and <i>utS</i> stock policies	244

xii List of Figures

Fig. 9 *FSAR* results of client, home and factory sector forecast adjustments, with *persistent* optimism (*O*) and pessimism (*P*), under the *AaA*, (*s*, *S*) and *utS* stock policies 245

Fig. 10 The time-domain results of run #8 on Fig. 9e 247

Fig. 11 *FSAR* results of client, home and factory sector *order* adjustments, with *mixed* optimism (*O*) and pessimism (*P*), under the *AaA*, (*s*, *S*) and *utS* stock policies 248

Fig. 12 *FSAR* results of the interaction among all-sector optimistic forecast and all-sector order adjustments with persistent optimism (*O*) and pessimism (*P*), under the *AaA*, (*s*, *S*) and *utS* stock policies 250

Fig. 13 The time-domain results of run #8 on Fig. 12e 251

Comparing Discrete-Event Simulation and System Dynamics: Users' Perceptions

Fig. 1 Overview of the prison population problem 270

Fig. 2 DES model representation in WITNESS, with the model on the left-hand side, input criteria in the top box on the right and in the box below model outputs 272

Fig. 3 SD model representation in Powersim 273

Fig. 4 SD model control panel, including the user interface and model results page—the main working environment 274

Fig. 5 P–P plot on understanding of the relationship between variables, SD *versus* DES answers, where 1 means understand very little and 5 understand very well 283

Fig. 6 P–P plot on understanding of how to use the model, SD *versus* DES answers, where 1 means understand very little and 5 understand very well. Points 1 and 2 coincide with the origin of the coordinates (0, 0) because none of the respondents answered with understand very little, and little, for either model 284

Fig. 7 Frequency diagram showing importance of animation and paper-based description as factors that helped user understanding of the model (DES and SD) 285

Fig. 8 P–P plot on level of detail of the model, SD *versus* DES answers, where 1 means very detailed and 5 meant very high level 286

Fig. 9 P–P plot on model representativeness, SD *versus* DES answers, where 1 means very little and 5 very much.

	Points 4 and 5 coincide because none of the respondents considered the models representative at level 5	288
Fig. 10	P–P plot on the capacity of the model to facilitate the communication of ideas, SD <i>versus</i> DES answers, where 1 means very little and 5 very well	289
Fig. 11	Bar chart with frequencies of DES and SD model users who used graphical outputs (conceptual learning)—a higher proportion of SD model users	290
Fig. 12	P–P plot on perceived difficulty in the interpretation of model results, SD <i>versus</i> DES answers, where 1 means very straightforward and 5 very difficult	291

Modelling the Sustainability of Mass Tourism in Island Tourist Economies

Fig. 1	Research objectives in this study	304
Fig. 2	World tourism development (arrivals)	307
Fig. 3	Destination considerations in respect of potential tourism demand	307
Fig. 4	High-level view of tourism system structure	308
Fig. 5	A simplified overview of the tourism model	309
Fig. 6	An iterative model testing process (adapted from Forrester and Senge 1980)	311
Fig. 7	Comparison of simulation result with actual data. (N.B. The time axis is cropped and covers the period from 1997 to 2007)	312
Fig. 8	Three scenarios for the fraction of charter flight arrivals (RCF = Ratio of Charter Flights; Dmnl = dimensionless)	315
Fig. 9	Impact of charter flight arrival scenarios on total tourist expenditure	315
Fig. 10	Impact of tourist taxation on Tour Price Attractiveness Index (TPAI)	318
Fig. 11	Impact of tourist taxation on arrivals at a tour destination	318
Fig. 12	Completed rates of construction of different hotel types after the policy change in month 498 (half way through 2001)	319
Fig. 13	Proportion of luxury hotels in the accommodation mix	320
Fig. 14	Effects of pressure on survival in a cheap holiday market	320

Modelling for Policy Assessment in the Natural Gas Industry

Fig. 1	Natural gas reserves development-cycle	334
Fig. 2	Influence of technology in the natural gas industry	336

Fig. 3	Integrated model with components	341
Fig. 4	Comparison of historic proven-reserves with those obtained via model simulation	342
Fig. 5	Historic production of gas	343
Fig. 6	Simulated natural gas demand in all sectors	345
Fig. 7	Evolution of relative and absolute natural gas prices under alternative scenarios	346
Fig. 8	Total production of natural gas under different scenarios of substitution	347
Fig. 9	Effects of policies in NO _x emissions	347
Fig. 10	Pipeline capacity and volumes transported in MSCF per day	349
Fig. 11	Market price, US\$/Mm ³	349

Understanding the Drivers of Broadband Adoption: The Case of Rural and Remote Scotland

Fig. 1	Scotland	360
Fig. 2	Causal diagram representing the Bass diffusion model	364
Fig. 3	Key factors affecting decision criteria for households with dial-up	367
Fig. 4	Key factors affecting decision criteria for businesses with dial-up	368
Fig. 5	Key factors that influence the pool of households without dial-up that are potential broadband adopters	370
Fig. 6	Key factors that influence the pool of businesses without dial-up that are potential broadband adopters	371
Fig. 7	Key factors that influence advertising	372
Fig. 8	Portion of System Dynamics model capturing factors that influence broadband adoption for businesses without dial-up	376
Fig. 9	Simulation model output assuming no future policies implemented to promote broadband adoption	378
Fig. 10	Sensitivity analysis for the weightings included in the householders decision criteria	380
Fig. 11	Implementing policies to encourage the appreciation of broadband attributes	381
Fig. 12	Halving the number of people who not want the Internet, or PC, at all	382

System Dynamics Mapping of Acute Patient Flows

Fig. 1	Preliminary activities in the acute patient flow mapping project	397
Fig. 2	Workshop activities	398

Fig. 3	Conceptual framework for NHS resources and pathways	401
Fig. 4	Core Map of pathways for acute patients	404
Fig. 5	Sub-map of the acute patient flows into and out of a hospital's main ward	407

Improving the Cost-Effectiveness of Chlamydia Screening with Targeted Screening Strategies

Fig. 1	Screening data extraction and manipulation	422
Fig. 2	Screening penetration: percentage of 16- to 24-year- old population screened by postcode district	423
Fig. 3	Prevalence by sex	424
Fig. 4	Opportunistic screen infection prevalence by postcode district	425
Fig. 5	Age and prevalence distribution	426
Fig. 6	Partner locations by patient type	426
Fig. 7	Trial coverage by postcode sector	429
Fig. 8	Total and positive test results by postcode district	430
Fig. 9	Prevalence by postcode sector	431
Fig. 10	Distribution of prevalence	432
Fig. 11	Opportunistic screen prevalence regression plot	436
Fig. 12	Opportunistic screen prevalence: results from CART	437
Fig. 13	SD model structure	439
Fig. 14	Cost savings for infection prevalence at 10%	441

Competitive Dynamics in Pharmaceutical Markets: A Case Study in the Chronic Cardiac Disease Market

Fig. 1	Volume of bisoprolol in Bulgaria	451
Fig. 2	Initial working hypothesis	452
Fig. 3	Stock and flow diagram for chronic disease patients	455
Fig. 4	Patient flows treated only with original drug and its sensitivity analysis	459
Fig. 5	Patient flows on a market with original and generic drugs (and its sensitivity analysis)	460
Fig. 6	NHIF costs: Original and generic drugs on the market	462
Fig. 7	Interactive learning environment: Policy Design Simulator	464
