BUILDING THE INFORMATION SOCIETY
IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP’s aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

*IFIP’s mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people.*

IFIP is a non-profit making organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP’s events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is less rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is in information may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.
BUILDING THE INFORMATION SOCIETY

IFIP 18th World Computer Congress
Topical Sessions
22–27 August 2004
Toulouse, France

Contents

Preface .........................................................................................................................................................xiii
List of Contributors ........................................................................................................................................... xv

TOPIC 1: Semantic Integration of Heterogeneous Data .................................................. 1

Three decades of data integration — All problems solved? ........................................... 3
  Patrick Ziegler, Klaus R. Dittrich

The PLIB ontology-based approach to data integration ............................................. 13
  Guy Pierra

The MOMIS methodology for integrating heterogeneous data sources ................... 19
  Domenico Beneventano, Sonia Bergamaschi

Building scalable mediator systems ........................................................................... 25
  Chantal Reynaud

Representation of procedural knowledge and its use to compute a form of subsumption ......................................................... 31
  Yamine Aït Ameur

TOPIC 2: Virtual Realities and New Entertainment ..................................................... 37

Developing re-usable interactive storytelling technologies ..................................... 39
  Mark Cavazza, Fred Charles, Steven J. Mead

Connecting the real world and virtual world through gaming .................................. 45
  Adrian D. Cheok, Goh Kok Hwee, Liu Wei, Jason Teo,
  Teo Sze Lee, Farzam Farbiz, Lee Shang Ping
Positive effects of entertainment technology on human behaviour .......... 51
  Matthias Rauterberg

Realization of tai-chi motion using a humanoid robot .................................................. 59
  Takenori Wama, Masayuki Higuchi, Hajime Sakamoto, Ryohei Nakatsu

Storytelling for recreating our selves — Zenetic computer ................................................. 65
  Naoko Tosa

Interaction in a sensitive house .................................................................................................. 71
  Henry Thomas

TOPIC 3: Fault Tolerance for Trustworthy and Dependable Information Infrastructures ........ 77

Dependable systems of the future — What is still needed? ................................................. 79
  Algirdas Avižienis

Dependability and its threats — A taxonomy ............................................................................. 91
  Algirdas Avižienis, Jean-Claude Laprie, Brian Randell

Current research activities on dependable computing and other dependability issues in Japan .......................................................................................................................... 121
  Yoshihiro Tohma, Masao Mukaidono

The evolution of dependable computing at the University of Illinois ........................................ 135

Wrapping the future ....................................................................................................................... 165
  Tom Anderson, Brian Randell, Alexander Romanovsky

From the University of Illinois via JPL and UCLA to Vytautas Magnus University — 50 years of computer engineering by Algirdas Avižienis ......................................................................................................................... 175
  David A. Rennels, Miloš D. Ercegovac

Airbus fly-by-wire — A total approach to dependability ......................................................... 191
  Pascal Traverse, Isabelle Lacaze, Jean Souyris
Unique dependability issues for commercial airplane fly by wire systems.................................................................213
   Ying C. (Bob) Yeh

The fault-hypothesis for the time-triggered architecture.........................221
   Hermann Kopetz

Communications dependability evolution................................................235
   Michele Morganti

Intrusion tolerance for Internet applications........................................241
   Yves Deswarte, David Powell

Static program transformations for efficient software model checking.................................................................257
   Shobha Vasudevan, Jacob A. Abraham

Architectural challenges for a dependable Information Society..............283
   Luca Simoncini, Felicita Di Giandomenico,
   Andrea Bondavalli, Silvano Chiaradonna

Experimental research in dependable computing at Carnegie Mellon University ..........................................................305
   Daniel P. Siewiorek, Roy A. Maxion, Priya Narasimhan

Systems approach to computing dependability in and out of Hitachi — Concept, applications and perspective...............329
   Hirokazu Ihara, Motohisa Funabashi

TOPIC 4: Abstract Interpretation.................................................................357

Basic concepts of abstract interpretation .................................................359
   Patrick Cousot, Radhia Cousot

TVLA — A system for generating abstract interpreters..........................367
   Tal Lev-Ami, Roman Manevich, Mooly Sagiv

aiT — worst case execution time prediction by static program analysis.................................................................377
   Christian Ferdinand, Reihold Heckmann

Astrée — verification of absence of run-time error..............................385
   Laurent Mauborgne
Industrial experience of abstract interpretation-based static analyzers
Jean Souyris

TOPIC 5 : Multimodal Interaction

Design space for multimodal interaction
Laurence Nigay

Software design and development of multimodal interaction
Marie-Luce Bourguet

A generic formal specification of fusion of modalities in a multimodal HCI
Yamine Ait Ameur, Nadjet Kamel

Multimodality and multi-platform interactive systems
Fabio Paternò

Multimodality and context-aware adaptation
Quentin Limbourg, Jean Vanderdonckt

Towards multimodal Web interaction
Dave Raggett, Max Froumentin, Philipp Hoschka

TOPIC 6: Computer Aided Inventing

Towards “inventiveness-oriented” CAI tools
Denis Cavallucci, Noel Leon

Exploring the inclusion of design factors in Computer Aided Inventing
Rosario Vidal, Elena Mulet, Belinda López-Mesa, M. Jose Bellés, Graham Thompson

State-of-the-art and trends of Computer-Aided Innovation tools
Gaetano Cascini

Computer aided comprehensive design for six sigma (DFSS) and axiomatic design (AD)
Michael S. Slocum
TRIZ and Computer Aided Inventing ......................................................... 475
    Sergei Ikovenko

Optimization vs innovation in a CAE environment .................................. 487
    Noel Leon, Jorge Gutierez, Oscar Martinez, Carlos Castillo

TOPIC 7: Emerging Tools and Techniques for Avionics Certification ...

Formal proof and test case generation for critical embedded systems using SCADE ................................................................. 499
    Guy Durrieu, Odile Laurent, Christel Seguin, Virginie Wiels

Safety assessment with AltaRica ................................................................ 505
    Pierre Bieber, Christian Bougnol, Charles Castel,
    Jean-Pierre Heckmann, Christophe Kehren,
    Sylvain Metge, Christel Seguin

Improving certification capability through automatic code generation ........ 511
    Neil Audsley, Iain Bate, Steven Crook-Dawkins,
    John McDermid

Early validation of requirements ................................................................. 521
    Steven P. Miller

Proof of properties in avionics ................................................................. 527
    Jean Souyris, Denis Favre-Felix

TOPIC 8: The Convergence of Bio-Info-Nano-Technologies .................. 537
    Final papers not available at press time

TOPIC 9: E-learning ................................................................................. 539

Running an e-learning Project — Technology, expertise, pedagogy ......... 541
    Xavier Delgado, Marie-Christine Jené

Learning objects interoperability — The ARIADNE experience ............... 551
    Philippe Vidal, Julien Broisin, Erick Duval, Stefaan Ternier
An e-learning version of the French higher education curriculum —
“Computer methods for the companies management” .......................... 557
  Gérard-Michel Cochard, Daniel Marquie

TOPIC 10: Perspectives on Ambient Intelligence .......................... 573

Perspectives on Computing for Service Providers of Intelligent
Environments ...................................................................................... 575
  Vijay Masurkar

Global Governance of the Technological Revolution ..................... 585
  Emilio Mordini

e-Health — Making Healthcare Better for European Citizens .......... 593
  Diane Whitehouse

Intelligent Ethics ............................................................................. 597
  Penny Duquenoy

TOPIC 11: TRain: The Railway Domain —
A Grand Challenge ........................................................................ 603

The TRain Topical Day - A foreword ............................................. 605
  Dines Bjørner

TRain — The Railway domain ......................................................... 607
  Dines Bjørner

Reusing formal models .................................................................. 613
  Denis Sabatier

A refinement based approach to calculating a fault tolerant
railway signal device ........................................................................ 621
  Alistair A. Mc Ewan, J.C.P. Woodcock

From railway resource planning to train operation ....................... 629
  Martin Penicka, Dines Bjørner

Integrated formal methods for safety analysis of train systems ....... 637
  Wolfgang Reif, Frank Ortmeier, Andreas Thums,
  Gerhard Schellhorn
Contents

Stochastic train domain theory framework ......................................................... 643
         Theo C. Giras, Zongli Lin

CyberRail ............................................................................................................ 651
         Takahiko Ogino

Towards a formal model of CyberRail ................................................................. 657
         Dines Bjorner, Peter Chiang, Morten S. T. Jacobsen,
         Jens Kielsgaard Hansen, Michael P. Madsen, Martin Penicka

TOPIC 12: Open-Source Software in Dependable Systems .............................. 665

Open source software in critical systems — Motivation and
challenges............................................................................................................. 667
         Philippe David, Hélène Waeselynck, Yves Crouzet

Trusting strangers — Open source software and security .............................. 679
         Carl E. Landwehr

An interdisciplinary perspective of dependability in
open source software .......................................................................................... 685
         Cristina Gacek

Is academic open source software dependable? ............................................. 693
         Shigeru Chiba

Open source in dependable systems — Current and future
business models ..................................................................................................... 699
         Cyrille Comar, Franco Gasperoni

An open-source VHDL IP library with Plug&Play
configuration ....................................................................................................... 711
         Jiri Gaisler

Linux — A multi-purpose executive support for civil avionics
applications? ............................................................................................................. 719
         Serge Goiffon, Pierre Gaufillet

A journey towards an OSS-aware organization ......................................... 725
         Jean-Michel Tanneau

TOPIC 13: Interdependencies of Critical Infrastructure ................................. 735
         Final papers not available at press time
TOPIC 14: Social Robots — Challenges for Machine Intelligence .............................................. 737

Social robots — Challenges for machine intelligence.......................................................... 739
   Raja Chatila, Georges Giralt

Development of humanoids and new business structure................................................. 741
   Hirochika Inoue

Towards robot companions ................................................................................................. 743
   Raja Chatila

Roles of robots in human society — Challenges and case studies......................... 745
   Kerstin Dautenhahn

Human-like motion from physiologically-based potential field........................................ 747
   O. Khatib, J. Warren, V. De Sapio, L. Sentis

A Dialog Based Interactive Robot, .................................................................................... 749
   Gerhard Sagerer

Tracking Humans .................................................................................................................. 751
   Ben Kröse, Taylan Cemgil, Wojciech Zajdel, Zoran Zivkovic

Learning and Cooperative Multimodal Humanoid Robots........................................... 753
   Ruediger Dillmann

From Geometric to Cognitive Maps — A Key Element for Personal Robots................ 755
   Roland Siegwart, Shrihari Vasudevan, Adriana Tapus

Centibots — Very Large Scale Distributed Robotic Teams................................. 761
   Kurt Konolige, Charlie Ortiz, Regis Vincent, Benoit Morisset, Andrew Agno, Michael Eriksen, Dieter Fox, Benson Limketkai, Jonathan Ko, Benjamin Stewart, Dirk Schulz
Preface

This book consists of the collection of articles or extended abstracts which have been written for the support of the so-called “Topical day/session” track during the 18th IFIP World Computer Congress, held in Toulouse from August 22-27, 2004.

I thank all the organizers, co-ordinators and contributors of these Topical Days for their involvement in the success of this track and for the success of the WCC itself.

The identification of topics and potential contributors was done with the strong support of Jean-Claude Laprie and Reino Kurki-Suonio. The evaluation of contribution and the selection was done by a specific committee. I would like to thank here: Algirdas Avižienis, Marie-Claude Gaudel, Takashi Nanya, Gus Olling and Jean-Jacques Quisquater.

The final edition of this book was made possible thanks to the effective work and support of Noëlle Desblancs, under the guidance and advices of Leon Strous and Yana Lambert. Many thanks for them.

René Jacquart (Topical Day Program Chair)
