Web-Based Applications in Healthcare and Biomedicine
Web-based applications provide the power of desktop and server applications with the flexibility and accessibility of the web. Using web browsers, users can securely access applications from anywhere within the reach of the company intranet or extranet. The special issue strives to explore the advanced web-based information systems and database applications in healthcare area.

Healthcare organizations are undergoing major reorganizations and adjustments to meet the increasing demands of improved healthcare access and quality, as well as lowered costs. As the use of information technology to process medical data increases, much of the critical information necessary to meet these challenges is being stored in digital format. Web-enabled information technologies can provide the means for greater access and more effective integration of healthcare information from disparate computer applications and other information resources.

This book presents studies from leading researchers and practitioners focusing on the current challenges, directions, trends, and opportunities associated with healthcare organizations and their strategic use of web-enabled technologies. Managing healthcare information systems with web-enabled technologies is an excellent vehicle for understanding current and potential uses of Internet technology in the broad areas of healthcare and medical applications.

The covered topics include semantic web applications, workflow management systems, process management and workflow management systems, content management and portal technology, location-aware systems and mobile technology, prototypes of web-based information systems, data and web mining, access control and security in web-based information systems, web-based information systems and databases, transaction management over the web and tools for the implementation of web-based information systems.

This handbook is an excellent source of comprehensive knowledge and literature on the topic of distributed health and e-health applications.

All of us who worked on the book hope that readers will find it useful.

Athina A. Lazakidou, Ph.D.
Contents

1 Development and Evaluation of a Web-Based Personal Electronic Health Record (pEHR) .................. 1
Vasileios G. Stamatopoulos, George E. Karagiannis,
Michael L. Rigby, and Sophia Kossida

2 Exploring the Potential of Over-the-Web Psychiatry ........ 1 3
Pantelis Angelidis

3 An Intelligent Web-Based Healthcare System:
The Case of DYMOS .......................... 1 9
Dimosthenis Georgiadis, Panagiotis Germanakos,
George Samaras, Constantinos Mourlas, and
Eleni Christodoulou

4 An Empirical Study of Sections in Classifying Disease Outbreak Reports ........................... 4 7
Son Doan, Mike Conway, and Nigel Collier

5 A Web-Based Application to Exchange Ophthalmologic Health Records Using Open-Source Databases ........ 5 9
Isabel de la Torre Díez, Roberto Hornero Sánchez,
Miguel López Coronado, María Isabel López Gálvez, and
Beatriz Sainz Abajo

6 An Image-Centric, Web-Based, Telehealth Information System for Multidisciplinary Clinical Collaboration .......... 7 7
Patricia Goede, Lori Frasier, and Iona Thraen

7 SOAP/WAD-Based Web Services for Biomedicine ........ 1 0 1
Thomas Meinel and Ralf Here Wieg

8 Web Resources for Gene List Analysis in Biomedicine ........ 1 1 7
Marco Masseroli and Marco Tagliasacchi

9 Web-Based Applications in Healthcare ........................ 1 4 3
Athina Lazakidou

Dr. Athina Lazakidou currently works at the University of Peloponnese, Department of Nursing in Greece as Lecturer in Health Informatics, and at the Hellenic Naval Academy as a Visiting Lecturer in Informatics. She worked as a Visiting Lecturer at the Department of Computer Science at the University of Cyprus (2000–2002) and at the Department of Nursing at the University of Athens (2002–2007). She did her undergraduate studies at the Athens University of Economics and Business (Greece) and received her BSc in Computer Science in 1996. In 2000, she received her PhD in Medical Informatics from the Department of Medical Informatics, University Hospital Benjamin Franklin at the Free University of Berlin, Germany. She is also an internationally known expert in the field of computer applications in healthcare and biomedicine, with six books and numerous papers to her credit. She was also Editor of the “Handbook of Research on Informatics in Healthcare and Biomedicine” and “Handbook of Research on Distributed Medical Informatics and E-Health”, the best authoritative reference sources for information on the newest trends and breakthroughs in computer applications applied to healthcare and biomedicine. Her research interests include health informatics, e-learning in medicine, software engineering, graphical user interfaces, (bio)medical databases, clinical decision support systems, hospital and clinical information systems, electronic medical record systems, telematics, and other web-based applications in healthcare and biomedicine.
