Preface

The perception–action cycle has been described by the eminent neuroscientist JM Fuster as the circular flow of information that takes place between the organism and its environment in the course of a sensory-guided sequence of behaviour towards a goal. Each action in the sequence causes certain changes in the environment that are analysed bottom-up through the perceptual hierarchy and leads to the processing of further action, top-down through the executive hierarchy, towards motor effectors. These cause new changes that are analysed and lead to new action, and so on.

This book provides a snapshot and a resumé of the current state-of-the-art of the ongoing research avenues concerning the perception–action cycle. The central aim of the volume is to be an informational resource and a methodology for anyone interested in constructing and developing models, algorithms and hardware implementations of autonomous machines empowered with cognitive capabilities.

The book is divided into three thematic areas: (1) computational neuroscience models, (2) cognitive architectures and (3) hardware implementations. In the first thematic area, leading computational neuroscientists present brain-inspired models of perception, attention, cognitive control, decision making, conflict resolution and monitoring, knowledge representation and reasoning, learning and memory, planning and action, and consciousness grounded on experimental data. In the second thematic area, architectures, algorithms and systems with cognitive capabilities and minimal guidance from the brain are discussed. These architectures, algorithms and systems are inspired from the areas of cognitive science, computer vision, robotics, information theory, machine learning, computer agents and artificial intelligence. In the third thematic area, the analysis, design and implementation of hardware systems with robust cognitive abilities from the areas of mechatronics, sensing technology, sensor fusion, smart sensor networks, control rules, controllability, stability, model/knowledge representation and reasoning are discussed.

This engaging volume will be invaluable to computational neuroscientists, cognitive scientists, robotists, electrical engineers, physicists, mathematicians and others interested in developing cognitive models, algorithms and systems of the perception–action cycle. Graduate level students and trainees in all of these fields will find this book a significant source of information.

Finally, there are many people whom we would like to thank for making this book possible. This includes all the contributing authors who did a great job. We would like to thank Ann H. Avouris, our Springer senior editor, and members of the production team, for their consistent help and support. We dedicate this work to our families.

Contents

Part I Computational Neuroscience Models

1	The Role of Attention in Shaping Visual Perceptual Processes	5
	John K. Tsotsos and Albert L. Rothenstein	
2	Sensory Fusion	23
	Mauro Ursino, Elisa Magosso, and Cristiano Cuppini	
3	Modelling Memory and Learning Consistently from Psychology to Physiology	63
	L. Andrew Coward	
4	Value Maps, Drives, and Emotions	135
	Daniel S. Levine	
5	Computational Neuroscience Models: Error Monitoring, Conflict Resolution, and Decision Making	169
	Joshua W. Brown and William H. Alexander	
6	Neural Network Models for Reaching and Dexterous Manipulation in Humans and Anthropomorphic Robotic Systems	187
	Rodolphe J. Gentili, Hyuk Oh, Javier Molina, and José L. Contreras-Vidal	
7	Schemata Learning	219
	Ryunosuke Nishimoto and Jun Tani	
8	The Perception-Conceptualisation-Knowledge Representation-Reasoning Representation-Action Cycle: The View from the Brain	243
	John G. Taylor	

9	Consciousness, Decision-Making and Neural Computation	287
	Edmund T. Rolls	
10	A Review of Models of Consciousness	335
	John G. Taylor	
Part II Cognitive Architectures		
11	Vision, Attention Control, and Goals Creation System	363
	Konstantinos Rapantzikos, Yannis Avrithis, and Stefanos Kolias	
12	Semantics Extraction From Multimedia Data: An Ontology-Based Machine Learning Approach	387
	Sergios Petridis and Stavros J. Perantonis	
13	Cognitive Algorithms and Systems of Episodic Memory, Semantic Memory, and Their Learnings	417
	Qi Zhang	
14	Motivational Processes Within the Perception–Action Cycle	449
	Ron Sun and Nick Wilson	
15	Cognitive Algorithms and Systems of Error Monitoring, Conflict Resolution and Decision Making	473
	Pedro U. Lima	
16	Developmental Learning of Cooperative Robot Skills: A Hierarchical Multi-Agent Architecture	497
	John N. Karigiannis, Theodoros Rekatsinas, and Costas S. Tzafestas	
17	Actions and Imagined Actions in Cognitive Robots	539
	Vishwanathan Mohan, Pietro Morasso, Giorgio Metta, and Stathis Kasderidis	
18	Cognitive Algorithms and Systems: Reasoning and Knowledge Representation	573
	Artur S. d’Avila Garcez and Luis C. Lamb	
19	Information Theory of Decisions and Actions	601
	Naftali Tishby and Daniel Polani	

20 Artificial Consciousness637
Antonio Chella and Riccardo Manzotti

Part III Hardware Implementations

21 Smart Sensor Networks675
Alvin S. Lim

22 Multisensor Fusion for Low-Power Wireless Microsystems711
Tong Boon Tang and Alan F. Murray

23 Bio-Inspired Mechatronics and Control Interfaces749
Panagiotis K. Artemiadis and Kostas J. Kyriakopoulos

Index777
