Springer Series in Statistics

- Andersen/Borgan/Gill/Keiding*: Statistical Models Based on Counting Processes.
- Berger*: Statistical Decision Theory and Bayesian Analysis, 2nd edition.
- Bolfarine/Zacks*: Prediction Theory for Finite Populations.
- Borg/Groenen*: Modern Multidimensional Scaling: Theory and Applications
- Brockwell/Davis*: Time Series: Theory and Methods, 2nd edition.
- Chen/Shao/Ibrahim*: Monte Carlo Methods in Bayesian Computation.
- Efromovich*: Nonparametric Curve Estimation: Methods, Theory, and Applications.
- Fahrmeir/Tutz*: Multivariate Statistical Modelling Based on Generalized Linear Models.
- Farebrother*: Fitting Linear Relationships: A History of the Calculus of Observations 1750-1900.
- Federer*: Statistical Design and Analysis for Intercropping Experiments, Volume I: Two Crops.
- Federer*: Statistical Design and Analysis for Intercropping Experiments, Volume II: Three or More Crops.
- Fienberg/Hoaglin/Kruskal/Tanur (Eds.)*: A Statistical Model: Frederick Mosteller's Contributions to Statistics, Science and Public Policy.
- Fisher/Sen*: The Collected Works of Wassily Hoeffding.
- Good*: Permutation Tests: A Practical Guide to Resampling Methods for Testing Hypotheses, 2nd edition.
- Gouriéroux*: ARCH Models and Financial Applications.
- Grandell*: Aspects of Risk Theory.
- Haberman*: Advanced Statistics, Volume I: Description of Populations.
- Hall*: The Bootstrap and Edgeworth Expansion.
- Härdle*: Smoothing Techniques: With Implementation in S.
- Hart*: Nonparametric Smoothing and Lack-of-Fit Tests.
- Hartigan*: Bayes Theory.
- Hedayat/Sloane/Stufken*: Orthogonal Arrays: Theory and Applications.
- Heyde*: Quasi-Likelihood and its Application: A General Approach to Optimal Parameter Estimation.
- Huet/Bouvier/Gruet/Jolivet*: Statistical Tools for Nonlinear Regression: A Practical Guide with S-PLUS Examples.
- Kolen/Brennan*: Test Equating: Methods and Practices.
- Kotz/Johnson (Eds.)*: Breakthroughs in Statistics Volume I.
- Kotz/Johnson (Eds.)*: Breakthroughs in Statistics Volume II.
- Kotz/Johnson (Eds.)*: Breakthroughs in Statistics Volume III.
- Küchler/Sørensen*: Exponential Families of Stochastic Processes.
- Le Cam*: Asymptotic Methods in Statistical Decision Theory.
- Le Cam/Yang*: Asymptotics in Statistics: Some Basic Concepts.
- Longford*: Models for Uncertainty in Educational Testing.
- Miller, Jr.*: Simultaneous Statistical Inference, 2nd edition.
- Mosteller/Wallace*: Applied Bayesian and Classical Inference: The Case of the Federalist Papers.
- Parzen/Tanabe/Kitagawa*: Selected Papers of Hirotugu Akaike.
- Politis/Romano/Wolf*: Subsampling.

Contents

1	Introduction	1
1.1	The Development of ARCH Models	1
1.2	Book Content	4
2	Linear and Nonlinear Processes	5
2.1	Stochastic Processes	5
2.2	Weak and Strict Stationarity	8
2.3	A Few Examples	12
2.4	Nonlinearities	22
2.4.1	Portmanteau Statistic	22
2.4.2	Some Implications of the White Noise Hypothesis . .	23
2.5	Exercises	26
3	Univariate ARCH Models	29
3.1	A Heteroscedastic Model of Order One	29
3.1.1	Description of the Model	29
3.1.2	Properties of the Innovation Process ε	30
3.1.3	Properties of the Y Process	32
3.1.4	Distribution of the Error Process	33
3.2	General Properties of ARCH Processes	34
3.2.1	Various Extensions	34
3.2.2	Stationarity of a GARCH(p, q) Process	37
3.2.3	Kurtosis	38

3.2.4	Yule–Walker Equations for the Square of a GARCH Process	38
3.3	Exercises	39
4	Estimation and Tests	43
4.1	Pseudo Maximum Likelihood Estimation	43
4.1.1	Generalities	43
4.1.2	The i.i.d. case	44
4.1.3	Regression Model with Heteroscedastic Errors	46
4.1.4	Regression Model with ARCH Errors	49
4.1.5	Application to a GARCH Model	51
4.1.6	Stochastic Variance Model	52
4.2	Two Step Estimation Procedures	53
4.2.1	Description of the Procedures	53
4.2.2	Comparison of the Estimation Methods under Conditional Normality	54
4.2.3	Efficiency Loss Analysis	55
4.3	Forecast Intervals	56
4.4	Homoscedasticity Test	58
4.4.1	Regression Models with Heteroscedastic Errors	58
4.5	The Test Statistic Interpretation	61
4.5.1	Application to Regression Models with ARCH or GARCH Errors	62
	Appendix 4.1: Matrices I and J	63
	Appendix 4.2: Derivatives of the Log-Likelihood Function and Information Matrix for a Regression Model with ARCH Errors	64
4.6	Exercises	65
5	Some Applications of Univariate ARCH Models	67
5.1	Leptokurtic Aspects of Financial Series and Aggregation	67
5.1.1	The Normality Assumption	67
5.1.2	The Choice of a Time Unit	69
5.2	ARCH Processes as an Approximation of Continuous Time Processes	71
5.2.1	Stochastic Integrals	71
5.2.2	Stochastic Differential Equations	73
5.2.3	Some Equations and Their Solutions	74
5.2.4	Continuous and Discrete Time	76
5.2.5	Examples	78
5.2.6	Simulated Estimation Methods	81
5.3	The Random Walk Hypothesis	83
5.3.1	Description of the Hypothesis	83
5.3.2	The Classical Test Procedure of the Random Walk Hypothesis	85

5.3.3	Limitations of the Portmanteau Tests	87
5.3.4	Portmanteau Tests with Heteroscedasticity	88
5.4	Threshold Models	90
5.4.1	Definition and Stationarity Conditions	90
5.4.2	Homoscedasticity Test	92
5.4.3	Qualitative ARCH Models	93
5.4.4	Nonparametric Approaches	95
5.5	Integrated Models	98
5.5.1	The IGARCH(1,1) Model	98
5.5.2	The Persistence Effect	99
5.5.3	Weak and Strong Stationarity	100
5.5.4	Example	101
5.6	Exercises	101
6	Multivariate ARCH Models	105
6.1	Unconstrained Models	105
6.1.1	Multivariate GARCH Models	105
6.1.2	Positivity Constraints	107
6.1.3	Stability Conditions	107
6.1.4	An Example	108
6.1.5	Spectral Decompositions	109
6.2	Constrained Models	111
6.2.1	Diagonal Models	111
6.2.2	Models with Constant Conditional Correlations	113
6.2.3	Models with Random Coefficients	114
6.2.4	Model Based on a Spectral Decomposition	116
6.2.5	Factor ARCH Models	116
6.3	Estimation of Heteroscedastic Dynamic Models	117
6.3.1	Pseudo Maximum Likelihood Estimators	117
6.3.2	Asymptotic Properties of the Pseudo Maximum Likelihood Estimator	119
6.3.3	Model with Constant Conditional Correlations	120
6.3.4	Factor Models	121
7	Efficient Portfolios and Hedging Portfolios	125
7.1	Determination of an Efficient Portfolio	125
7.1.1	Securities and Portfolios	125
7.1.2	Mean Variance Criterion	128
7.1.3	Mean Variance Efficient Portfolios	129
7.2	Properties of the Set of Efficient Portfolios	132
7.2.1	The Set of Efficient Portfolios	132
7.2.2	Factors	135
7.3	Asymmetric Information and Aggregation	137
7.3.1	Incoherency of the Mean Variance Approach	137
7.3.2	Study of the Basic Portfolios	138

7.3.3	Aggregation	139
7.4	Hedging Portfolios	140
7.4.1	Determination of a Portfolio Mimicking a Series of Interest	141
7.4.2	A Model for the Call Seller Behavior	142
7.4.3	The Firm Behavior	147
7.5	Empirical Study of Performance Measures	148
7.5.1	Performances of a Set of Assets	148
7.5.2	Improving the Efficiency	149
7.5.3	Estimation of the Efficient Portfolio and its Performance in the Static Case	149
	Appendix 1: Presentation in Terms of Utility	152
	Appendix 2: Moments of the Truncated Log-Normal Distribution	155
	Appendix 3: Asymptotic Properties of the Estimators	156
7.6	Exercises	157
8	Factor Models, Diversification and Efficiency	161
8.1	Factor Models	162
8.1.1	Linear Factor Representation	162
8.1.2	Representation with Endogenous Factors	163
8.1.3	Structure of the Conditional Moments	165
8.1.4	Cofactors	167
8.1.5	Characterization with the Matrix Defining the Endogenous Factors	167
8.2	Arbitrage Theory	168
8.2.1	Absence of Arbitrage Opportunities	168
8.2.2	Diversification and Pricing Model	169
8.2.3	Diversification and Risk Aversion	172
8.3	Efficiency Tests and Diversification	172
8.3.1	Ex-Ante Efficiency	172
8.3.2	Ex-Post Efficiency	175
8.4	Conditional and Historical Performance Measures	177
8.4.1	The Dynamics of a Model with Endogenous Factors	177
8.4.2	Tests for Ex-Ante Efficiency and Performances	179
8.5	Exercises	180
9	Equilibrium Models	183
9.1	Capital Asset Pricing Model	183
9.1.1	Description of the Model	183
9.1.2	Market Portfolio	184
9.1.3	The CAPM as a Factor Model	185
9.1.4	Spectral Decomposition of the Moments	186
9.1.5	Time Dependent Risk Aversion	187
9.2	Test of the CAPM	187
9.2.1	Some Difficulties	188

9.2.2	Testing Procedures in a Static Framework	191
9.2.3	Test for Efficiency of the Market Portfolio in a Dynamic Framework with Constant Betas	196
9.2.4	Tests in the General Case	197
9.3	Examples of Structural Models	199
9.3.1	A Model with Speculative Bubbles	199
9.3.2	The Consumption Based CAPM	202
	References	207
	Index	227
