Preface

This monograph reviews some of the work that has been done for longitudinal data in the rapidly expanding field of nonparametric regression. The aim is to give the reader an impression of the basic mathematical tools that have been applied, and also to provide intuition about the methods and applications. Applications to the analysis of longitudinal studies are emphasized to encourage the non-specialist and applied statistician to try these methods out. To facilitate this, FORTRAN programs are provided which carry out some of the procedures described in the text. The emphasis of most research work so far has been on the theoretical aspects of nonparametric regression. It is my hope that these techniques will gain a firm place in the repertoire of applied statisticians who realize the large potential for convincing applications and the need to use these techniques concurrently with parametric regression.

This text evolved during a set of lectures given by the author at the Division of Statistics at the University of California, Davis in Fall 1986 and is based on the author's Habilitationsschrift submitted to the University of Marburg in Spring 1985 as well as on published and unpublished work. Completeness is not attempted, neither in the text nor in the references. The following persons have been particularly generous in sharing research or Gasser, P. giving advice: Th. Ihm, Y.P. Mack, V. Mammitzsch, G.G. Roussas, U. Stadtmüller, W. Stute and R. Trautner, and I am very grateful to them as well as to numerous other colleagues with whom I had fruitful I also express my sincere thanks to Colleen Criste for discussions. excellent typing, and to Wilhelm Kleider and Thomas Schmitt for computing assistance.

Erlangen, December 1987

Hans-Georg Müller

ACKNOWLEDGEMENTS

The author gratefully acknowledges the permission of the following publishers to reproduce some of the illustrations and tables.

Almquist and Wiksell International (Scand. J. Statistics), Stockholm. Institute of Mathematical Statistics, Hayward, California.

Royal Statistical Society, London.

F.K. Schattauer Verlagsgesellschaft mbH, Stuttgart.

Taylor & Francis Ltd., London.

Contents

Preface

1.	Introduction			
2.	Longitudinal data and regression models 2.1 Longitudinal data 2.2 Regression models 2.3 Longitudinal growth curves	6 6 7 9		
3.	Nonparametric regression methods 3.1 Kernel estimates 3.2 Weighted local least squares estimates 3.3 Smoothing splines 3.4 Orthogonal series estimates 3.5 Discussion 3.6 Heart pacemaker study	15 17 19 21 23 24		
4.	Kernel and weighted local least squares methods 1.1 Mean Squared Error of kernel estimates for curves and derivatives 2.2 Asymptotic normality 3.3 Boundary effects and Integrated Mean Squared Error 3.4 Muscular activity as a function of force 4.5 Finite sample comparisons 4.6 Equivalence of weighted local regression and kernel estimators	26 31 32 36 38 43		
5.	Optimization of kernel and weighted local regression methods 5.1 Optimal designs	47 49 50 52 58 63 65 71		
6.	Multivariate kernel estimators	77 77 84 86		

7.	Choice	e of global and local bandwidths	91	
	7.1	Overview	91	
	7.2	Pilot methods	94	
	7.3	Cross-validation and related methods	98	
	7.4	Bandwidth choice for derivatives	100	
	7.5	Confidence intervals for anthropokinetic data	107	
	7.6	Local versus global bandwidth choice	110	
	7.7	Weak convergence of a local bandwidth process		
	7.8	Practical local bandwidth choice		
8.	Longi	tudinal parameters	122	
	8.1	Comparison of samples of curves		
	8.2	Definition of longitudinal parameters and consistency	124	
	8.3	Limit distributions	126	
9.	Nonpa	rametric estimation of the human height growth curve .	131	
	9.1	Introduction	131	
	9.2	Choice of kernels and bandwidths		
	9.3	Comparison of parametric and nonparametric regression	135	
	9.4	Estimation of growth velocity and acceleration	141	
	9.5	Longitudinal parameters for growth curves	144	
	9.6	Growth spurts	147	
10.	Furth	er applications	151	
	10.1	Monitoring and prognosis based on longitudinal		
	10.2	medical data	151	
	10.2	intervals	153	
	10.3	Further developments		
11.	Consistency properties of moving weighted averages 15			
	11.1	Local weak consistency		
	11.2	Uniform consistency		
12.	FORTR	AN routines for kernel smoothing and differentiation .		
	12.1	Structure of main routines KESMO and KERN		
	12.2	Listing of programs	169	
Dofo	Deferences
