# Energy and Environmental Policy Modeling

## Contents

<i>Chapter 1: Introduction and Overview</i> .....	1
Basic Concepts .....	2
Resource Supply and Depletion.....	2
Price and Non-Price Determinants of Energy Demand .....	2
Interfuel Competition.....	3
End-Use Modeling.....	4
Integrating Supply and Demand .....	5
Aggregate Energy-Economy Interactions .....	5
Multi-Sector Energy-Economy Interactions .....	6
Overview of Book.....	6
References.....	7
<i>Chapter 2: Technological Advances in Recovery Methods and Efficient Allocation     Of a Non-Renewable Resource</i> .....	9
Introduction.....	9
Technological Advances in Petroleum and Natural Gas Recovery.....	10
The Computational Model and Base Case Assumptions.....	11
Computational Results .....	13
Base Case Outcomes .....	13
Representing Technological Progress .....	15
Underestimating the Benefits of Technological Progress.....	17
Outcomes with Reduced Existing Reserves.....	20
Outcomes with Faster Demand Growth and Enhanced Export Prospects .....	22
Outcomes with a Higher Discount Rate .....	25
On the Generality of the Results.....	25
Concluding Remarks.....	26
Appendix.....	27
Details of the computational model .....	27
References.....	30
Endnotes.....	31
<i>Chapter 3: A Concurrent Auction Model for Transmission     Congestion Contracts</i> .....	33
Introduction.....	33
Transmission Congestion Contracts.....	33
Concurrent Auction .....	35
Example Auction.....	37
Including Losses and Reactive Power.....	40
Extensions .....	41
Conclusion .....	43
Endnotes.....	43

<i>Chapter 4: Spot Markets in Electric Power Network: Theory</i> .....	47
Introduction.....	47
A Simple Model of Electric Power Network.....	48
Power flow equations.....	48
Social welfare action.....	49
A Market Mechanism.....	50
An efficient trading rule.....	51
Competitive equilibrium and social optimum.....	52
A Dynamic Trading Process.....	54
An Illustrative Example.....	56
Alternative Implementation Plans.....	59
Conclusions.....	59
Appendix.....	60
References.....	64
Endnotes.....	64
<i>Chapter 5: The Berlin Mandate: The Design of Cost-Effective     Mitigation Strategies</i> .....	67
Introduction.....	68
The Models.....	69
Future Emissions.....	70
The Costs of Alternative Commitments.....	73
Some Final Comments.....	80
Endnotes.....	82
<i>Chapter 6: Some Implications of Improved CO<sub>2</sub> Emissions Control     Technology in The Context of Global Climate Change</i> .....	85
Introduction.....	85
The CETA-R Model.....	86
Economic system.....	86
Climate system.....	87
Uncertain losses from temperature rise.....	87
Technology Assumptions.....	88
Implications of Loss Probability and Technology Assumptions.....	89
Improved Technology and the Value of Information About Damage.....	94
Value of Information about Technology and Benefits of Improved Technology.....	95
Summary and Conclusions.....	97
References.....	97
Endnotes.....	98
<i>Chapter 7: Determining an Optimal Afforestation Policy: A Cost-Benefit     Analysis</i> .....	99
Introduction – Motivation and afforestation.....	99
Afforesting and halting deforestation: domestic verses global solutions.....	101
Research Objectives.....	102
Integrated assessment.....	102
Time horizon and discounting.....	103
Carbon sequestration time path.....	103

Interactions with other markets.....	104
Structural Overview.....	104
Traditional timberland module.....	106
Afforestation module.....	106
Timber market module.....	108
Sequestration calculations.....	109
Objective function.....	109
Regionalization and Model Data.....	110
Southern submodel data.....	111
Pacific submodel data.....	112
Northern submodel data.....	112
Rockie's submodel data.....	112
Linkage to MERGE: carbon valuation.....	112
Results and Conclusions.....	113
Measuring program effectiveness: net sequestration.....	114
Results for the scenario with baseline carbon valuation.....	115
Results for the scenario with high carbon valuation.....	118
Sequestration as a national mitigation strategy: the big picture.....	121
Conclusion.....	123
References.....	123
<i>Chapter 8: Economic Incentives, Intergenerational Altruism and Sustainability.....</i>	<i>125</i>
Introduction.....	125
Sustainability, Discounting and Selfish Egoism.....	127
Modeling.....	128
Production and climate change.....	128
Consumption, climate policy and discounting.....	130
Climate policy in a decentralized overlapping generations economy.....	130
Intergenerational altruism.....	131
Computational Experiments.....	132
Conclusions.....	136
References.....	137
Appendix: Data.....	138
Endnotes.....	138
<i>Chapter 9: Sequential Joint Maximization.....</i>	<i>139</i>
Introduction.....	139
General Equilibrium in a Complementarity Format.....	141
Integrable Heterogeneous Demand and a Joint Maximization Algorithm.....	143
Algorithm SJM-P-formal statement.....	147
Joint Maximization with Dual Functions.....	148
The Connection Between SJM, SLCP and VI.....	149
Convergence.....	151
Conclusion.....	155
References.....	155
Appendix A: Extensions of the SJM Algorithm.....	157
Nonlinear production.....	157
Ad-valorem taxes.....	158
Appendix B: GAMS Code.....	159

Two-by-two Exchange .....	159
Manne's Jack-Sprat example .....	161
Scarf's globally unstable exchange model .....	163
Hansen's activity analysis example .....	165
Endnotes .....	174
<i>Chapter 10: A Brief History of the International Energy Workshop</i> .....	177
The International Energy Workshop .....	177
The First IEW Meeting .....	178
The IEW's "Oil Price Era" .....	178
The "CHALLENGE ERA" .....	182
Methodological Considerations .....	184
References .....	185
Endnotes .....	185
