Advances in Cryogenic Engineering

Volume 11

Proceedings of the 1965 Cryogenic Engineering Conference
Rice University
Houston, Texas
August 23-25, 1965

K. D. TIMMERHAUS, Editor
Engineering Research Center
University of Colorado
Boulder, Colorado

Springer Science+Business Media, LLC
1966
Library of Congress Catalog Card Number: 57-35598

DOI 10.1007/978-1-4757-0522-5
CONTENTS

Foreword xi
1964 Award-Winning Paper xi
Acknowledgment xii
1965 Cryogenic Engineering Conference Committee xii
The Samuel C. Collins Award xiii

Invited Papers

A-1 The Impact of the Space Age on Cryogenics, A. O. Tischler, NASA Office of Advanced Research and Technology 1
A-2 Helium Refrigerator and Liquefier, S. C. Collins, Massachusetts Institute of Technology and Arthur D. Little, Inc. 11

Insulation

B-1 Shingle Multilayer Insulation for Space Vehicles Using Cryogenic Fluids, R. T. Parmley, D. R. Elgin, and R. M. Coston, Lockheed Missiles and Space Company 16
B-2 Effects of Compressive Loads on the Heat Flux Through Multilayer Insulations, I. A. Black and P. E. Glaser, Arthur D. Little, Inc. 26
B-3 Experimental Evaluation of Some Selected Lightweight Superinsulation for Space Vehicles, R. C. Getty, J. P. Clay, E. J. Kremzier, and K. E. Leonhard, General Dynamics/Convair 35
B-4 Effective Purging of High-Performance Multilayer Insulation Systems, T. C. Nast, Lockheed Missiles and Space Company 49
B-5 Experimental Evaluation of the Equations and Parameters Governing Flow Through Multilayer Insulations During Evacuation, R. M. Coston, Lockheed Missiles and Space Company 56
B-6 Effect of Convection in Helium-Charged, Partial-Foam Insulations for Liquid Hydrogen Propellant Tanks, B. N. Taylor and F. E. Mack, North American Aviation, Inc. 65
B-7 Some Heat Transfer Considerations in Non-Evacuated Cryogenic Powder Insulation, C. L. Johnson, Lockheed-California Company, and D. J. Hollwegler, McDonnell Aircraft Corporation 77
B-8 Development of the Saturn S-IV and S-IVB Liquid Hydrogen Tank Internal Insulation, D. L. Dearing, Douglas Aircraft, Inc. 89
B-9 Considerations in the Design, Selection, and Use of Vacuum-Insulated Pipe, G. C. Haettinger, Union Carbide Corporation, Linde Division 98

Refrigeration

C-1 Design of a Closed-Cycle Helium Temperature Refrigerator, C. E. Witter, Union Carbide Corporation, Linde Division 107
C-3 A Cold-Moderator Refrigerator Incorporating a High-Speed Turbine Expander, R. O. VOTH, M. T. NORTON, and W. A. WILSON, CD-NBS Institute for Materials Research ................................. 126
C-4 Refrigeration Requirements for a Superconducting Continuous-Sheet Computer Memory, D. L. ATHERTON and H. J. SMITH, Ferranti Electronics, Division of Ferranti-Packard Electric ........................................... 139
C-5 The Gifford–McMahon Cycle, W. E. GIFFORD, Syracuse University ................. 152
C-6 The Performance of Refrigeration Cycles below 100°F, D. G. WILSON and B. J. d'ARBELOFF, Northern Research and Engineering Corporation .......... 160
C-7 Surface Heat Pumping, W. E. GIFFORD and R. C. LONGSWORTH, Syracuse University ................................................................. 171
C-8 Local High-Intensity Cryogenic Cooling, J. H. JONES and R. G. SHOULBERG, General Electric Company .............................................. 180

Space Technology

D-1 Simplifying Large Cryogenic Research Tankage Temperature Measurements, R. M. KOCHEK, W. G. WILSON, and D. B. SCHNEIDER, Lockheed Missiles and Space Company ........................................... 189
D-2 Cooling with Solid Cryogens—A Review, A. A. FOWLE, Arthur D. Little, Inc. 198
D-5 A Superconducting Liquid-Level Sensor for Slush Hydrogen Use, B. L. KNIGHT, K. D. TIMMERHAUS, and T. M. FLYNN, CD-NBS Institute for Materials Research ................................................................. 218
D-9 Saturn Vehicle Cryogenic Programs, R. D. WALKER and B. J. HERMAN, NASA George C. Marshall Space Flight Center ........................................... 251

Cryogenic Properties

E-1 Heat of Fusion and Density of Solid Parahydrogen at Pressures to about 400 Atmospheres, H. R. LANDER, Air Force Aero Propulsion Laboratory, and R. F. DWYER and G. A. COOK, Union Carbide Corporation, Linde Division ................................................................. 261
Contents

E-3 Hazard Studies with Hydrogen and Oxygen in the Liquid and Solid Phases, S. Kaye, General Dynamics/Convair

E-4 Investigation of Potential Low Temperature Insulators, J. Hertz, General Dynamics/Convair

E-5 Physical Properties of Filament Wound Glass Epoxy Structures as Applied to Possible Use in Liquid Hydrogen Bubble Chambers, H. Brechta and W. Haldeemann, Stanford Linear Accelerator Center

E-7 Absorptance of Thermal Radiation by Cryodeposit Layers, D. G. McConnell, NASA Lewis Research Center

Phase Equilibria and Thermodynamics

F-2 Liquid–Vapor Phase Equilibria of the Neon–Normal Hydrogen System, C. K. Heck and P. L. Barrick, University of Colorado

F-3 Liquid–Vapor Equilibrium in the System Neon–Oxygen from 63° to 152°K and at Pressures to 5000 psi, W. B. Streett and C. H. Jones, United States Military Academy

F-5 The Vapor Pressure of Dry Air at Low Temperatures, G. Walker, W. J. Christian, and R. A. Budenholzer, IIT Research Institute

F-6 The P-V-T Behavior of Nitrogen, Argon, and Their Mixtures, R. W. Crain, Jr. and R. E. Sonntag, University of Michigan

F-7 Calculation of Enthalpy Data from a Modified Redlich–Kwong Equation of State, G. M. Wilson, Air Products and Chemicals, Inc.

Mechanical Properties

G-1 A Cryostat for Izod Impact Testing, D. T. Eash, University of California, Los Alamos Scientific Laboratory

G-2 Mechanical Properties of Electroformed Nickel at Room and Cryogenic Temperatures, J. L. Christian, W. G. Sch Heck, and J. D. Cox, General Dynamics/Convair

G-4 The Development of Titanium and Inconel Cryogenic Pressure Vessels, R. J. Balthazar and H. E. Sutton, Beech Aircraft Corporation

G-5 Tensile and Creep Properties of a High Nitrogen Content 18/10 (AISI 304-L) Stainless Steel at Cryogenic Temperatures, R. Voyer, Canadian Liquid Air, Ltd., and L. Weil, Centre de Recherches sur les Trés Bases Températures

G-6 Cryogenic Design Data and Criteria of Aerospace Materials Subjected to Uniaxial and Biaxial Stress States, S. W. McClaren and C. R. Foreman, LTV Aerospace Corporation

G-7 Cryogenic Properties of High-Strength Glass-Reinforced Plastics, R. D. Keys, T. F. Kiefer, and F. R. Schwartzberg, Martin Company
