# Introduction

This is a next-level Oracle APEX book that is written for intermediate users who possess some working knowledge of Oracle APEX. Besides providing new development techniques, it equips the audience with the domain knowledge they need to develop real-world business apps for and in the cloud. Oracle APEX has made the lives of web developers much easier. This rapid application development platform helps you create web-based, data-centric applications easily and instantly without writing tons of code.

You might be one of those readers who is already familiar with Oracle APEX, having some experience in developing simple applications but lacking the required knowledge that is needed to develop a comprehensive system. In this book you will bridge this gap by developing a complete general ledger accounting system named The Cloud Accountant, which will be accessible through a variety of devices including desktops, laptops, and the latest smartphones. Besides the development of a functional application (which you can deploy in your organization or even in other organizations to earn some handsome bucks), the book teaches lots of new techniques to further enhance your APEX development skills.
