Preface

Cell fusion is a specialized cellular event that is critical for the conception, development and physiology of a multicellular organism. Known as a phenomenon for over a hundred years, cell fusion took center stage in the early analysis of gene expression, chromosomal mapping, monoclonal antibody production, and cancer therapy. It is only recently, however, that the molecular mechanisms of cell fusion have begun to come to light, thanks to the application of new technologies in genetics, cell biology, molecular biology, biochemistry, and genomics.

Exciting work in the past decade has revealed commonalities and differences among individual cell fusion events. The aim of *Cell Fusion: Overviews and Methods* is to bring together a collection of overviews that outline our current understanding of cell fusion and methods that present classic and state-of-the-art experimental approaches in a variety of systems. The first half of this volume consists of nine overviews that describe different cell fusion events from yeast to mammals. The second half consists of thirteen chapters illustrating commonly used methods to assay cell fusion in different systems.

The overall goal for this book is to serve as a comprehensive resource for anyone who is interested in this fascinating biological problem. It is intended for both newcomers and active researchers in the field to either acquire basic knowledge on cell fusion or to compare and contrast different cell fusion events. The user-friendly format of the method chapters should enable beginning students and experienced researchers to conduct assays in a variety of cell fusion systems.

The completion of *Cell Fusion: Overviews and Methods* would not have been possible without the enthusiastic support and outstanding contributions from all authors, to each of whom I owe a big and hearty thanks. My deep gratitude also goes to Chelsea Newhouse for her excellent assistance in proof-reading all the chapters, communicating with the authors, and organizing the manuscripts. Finally, I would like to thank the series editor, Dr. John Walker, for his encouragement and guidance throughout the editing process.

Elizabeth H. Chen

Contents

Preface	v
Contributors	ix

PART I CELL FUSION

1 Yeast Mating: <i>A Model System for Studying Cell and Nuclear Fusion</i>	3
Casey A. Ydenberg and Mark D. Rose	
2 Cell Fusion in the Filamentous Fungus, <i>Neurospora crassa</i>	21
André Fleißner, Anna R. Simonin, and N. Louise Glass	
3 Gametic Cell Adhesion and Fusion in the Unicellular Alga <i>Chlamydomonas</i>	39
Nedra F. Wilson	
4 Cell Fusion in <i>Caenorhabditis elegans</i>	53
Scott Alper and Benjamin Podbilewicz	
5 Myoblast Fusion in <i>Drosophila</i>	75
Susan M. Abmayr, Shufei Zhuang, and Erika R. Geisbrecht	
6 Mammalian Fertilization Is Dependent on Multiple Membrane Fusion Events	99
Paul M. Wassarman and Eveline S. Litscher	
7 Molecular Control of Mammalian Myoblast Fusion	115
Katie M. Jansen and Grace K. Pavlath	
8 Placenta Trophoblast Fusion.....	135
Berthold Huppertz and Marcus Borges	
9 Macrophage Fusion: <i>Molecular Mechanisms</i>	149
Agnès Vignery	

PART II CELL FUSION ASSAYS

10 Cell Fusion Assays for Yeast Mating Pairs	165
Eric Grote	
11 Ultrastructural Analysis of Cell Fusion in Yeast.....	197
Alison E. Gammie	
12 Isolation and In Vitro Binding of Mating Type Plus Fertilization Tubules From <i>Chlamydomonas</i>	213
Nedra F. Wilson	
13 Optical Imaging of Cell Fusion and Fusion Proteins in <i>Caenorhabditis elegans</i>	223
Star Ems and William A. Mohler	

14	Ultrastructural Imaging of Cell Fusion in <i>Caenorhabditis elegans</i>	245
	Star Ems and William A. Mohler	
15	Live Imaging of <i>Drosophila</i> Myoblast Fusion	263
	Brian E. Richardson, Karen Beckett, and Mary K. Baylies	
16	Ultrastructural Analysis of Myoblast Fusion in <i>Drosophila</i>	275
	Shiliang Zhang and Elizabeth H. Chen	
17	A Genomic Approach to Myoblast Fusion in <i>Drosophila</i>	299
	Beatriz Estrada and Alan M. Michelson	
18	Mesenchymal Cell Fusion in the Sea Urchin Embryo.....	315
	Paul G. Hodor and Charles A. Etnensohn	
19	Sperm–Egg Fusion Assay in Mammals.....	335
	Naokazu Inoue and Masaru Okabe	
20	Quantitative Assays for Cell Fusion.....	347
	Jessica H. Shinn-Thomas, Victoria L. Scranton, and William A. Mohler	
21	Fusion Assays and Models for the Trophoblast.....	363
	Sascha Drewlo, Dora Baczyk, Caroline Dunk, and John Kingdom	
22	Methods to Fuse Macrophages In Vitro	383
	Agnès Vignery	
	Index.....	397
