Preface

Potassium channels are important regulators of membrane excitability, which in turn determines cellular function. They form a super-family of ion channels that are regulated by a diverse range of chemical and physical stimuli. In excess of 80 genes in the human genome encode pore-forming potassium channel subunits. Diversity is further enhanced by alternative splicing of subunit mRNA, heteromeric assembly between pore-forming subunits, or by association with accessory proteins. The basis of several inherited diseases lies in potassium channel gene mutations, and the pharmacological manipulation of potassium channel function is increasingly important as a strategy in the treatment of disease. This provides researchers with the challenge of developing tools and experimental procedures to probe potassium channel function and identify chemicals that modulate their behaviour.

We have progressed since the initial mid-twentieth century studies of delayed rectifier, anomalous rectifier, and leak potassium currents, and now ask questions such as “What does a potassium channel look like?”, “How do changes in membrane potential gate a potassium channel?”, or “Which proteins assemble to form a potassium channel complex in this particular cell?”. Many of these questions cannot be answered by electrophysiological techniques alone, thus scientists have adopted techniques from other disciplines to assist their studies.

This volume describes a range of experimental approaches that have been developed to investigate potassium channel structure, function, pharmacology, cell biology, gene expression, and their role in disease. Many of these techniques study potassium channels as cellular proteins as well as the resultant membrane biophysics. They are proteins that are synthesised according to mRNA sequence, trafficked to the correct location in the cell at the appropriate time, interact with other protein components, change conformation following stimulation, all in addition to providing a conduit for potassium ions to cross membranes. Naturally, content covering the topic of ion channels would not be without electrophysiological techniques, but here they are focused on those that enable the study of intracellular modulation, which is of particular importance to many potassium channels.

All investigators, including new researchers and discipline-hopping scientists, will benefit from this volume. Within the various chapters you will also find protocols for several standard laboratory techniques, such as cell culture, transfection, *Xenopus* oocyte preparation, Western blotting, and whole-cell patch clamp recording. Indeed, the techniques found in this book can be applied to the study of many other types of ion channel. There is an increasing trend to answer scientific questions using a wide range of approaches and it is hoped that the techniques outlined in this volume will help provide finishing touches to research projects or provide new avenues of investigation.

Contents

<i>Preface</i>	<i>v</i>
<i>Contributors</i>	<i>ix</i>
PART I. METHODS FOR STUDYING POTASSIUM CHANNEL TRANSCRIPTION AND mRNA SPLICING	
1. Identifying Transcriptional Regulatory Regions Using Reporter Genes and DNA–Protein Interactions by Chromatin Immunoprecipitation	3
<i>Lezanne Ooi and Ian C. Wood</i>	
2. Quantitative RT-PCR Methods for Investigation of Low Copy Potassium Channel Gene Expression in Native Murine Arteries	19
<i>Alex Cheong, Samuel J. Fountain, and David J. Beech</i>	
3. Cloning of Potassium Channel Splice Variants from Tissues and Cells	35
<i>Lie Chen and Michael J. Shipston</i>	
PART II. METHODS FOR STUDYING THE CELL BIOLOGY OF POTASSIUM CHANNEL PROTEINS	
4. Chemiluminescence Assays to Investigate Membrane Expression and Clathrin-Mediated Endocytosis of K_{ATP} Channels	63
<i>Andrew J. Smith and Asipu Sivaprasadarao</i>	
5. Investigation of K_{ATP} Channel Endocytosis by Immunofluorescence	69
<i>Andrew J. Smith and Asipu Sivaprasadarao</i>	
6. Investigation of K_{ATP} Channel Endocytosis and Cell Surface Density by Biotinylation and Western Blotting	79
<i>Andrew J. Smith and Asipu Sivaprasadarao</i>	
7. Lipid Microdomains and K^+ Channel Compartmentation: Detergent and Non-Detergent-Based Methods for the Isolation and Characterisation of Cholesterol-Enriched Lipid Rafts.	91
<i>Laura J. Sampson and Caroline Dart</i>	
8. Determination of Phosphoinositide Binding to K^+ Channel Subunits Using a Protein–Lipid Overlay Assay	103
<i>Alison M. Thomas and Andrew Tinker</i>	
9. Protein Complex Analysis of Native Brain Potassium Channels by Proteomics	113
<i>Guillaume Sandoz and Florian Lesage</i>	
PART III. ELECTROPHYSIOLOGICAL TECHNIQUES FOR THE STUDY OF POTASSIUM CHANNEL FUNCTION	
10. <i>Xenopus</i> Oocytes as a Heterologous Expression System for Studying Ion Channels with the Patch-Clamp Technique	127
<i>Paolo Tammaro, Kenju Shimomura, and Peter Proks</i>	

11.	Whole-Cell Recording Using the Perforated Patch Clamp Technique	141
	<i>Jonathan D. Lippiat</i>	
12.	Recording the Activity of ATP-Sensitive K ⁺ Channels in Open-Cell Cell-Attached Configuration	151
	<i>Andrei I. Tarasov</i>	
13.	Planar Patch Clamp: Advances in Electrophysiology.	165
	<i>Andrea Brüggemann, Cecilia Farre, Claudia Haarmann, Ali Haythornthwaite, Mohamed Kreir, Sonja Stoelzle, Michael George, and Niels Fertig</i>	
14.	Analysing Steroid Modulation of BK _{Ca} Channels Reconstituted into Planar Lipid Bilayers.	177
	<i>Heidi de Wet, Jonathan D. Lippiat, and Marcus Allen</i>	
PART IV. OPTICAL TECHNIQUES FOR THE STUDY OF POTASSIUM CHANNEL FUNCTION AND INTERACTIONS		
15.	Using Bioluminescence Resonance Energy Transfer to Measure Ion Channel Assembly.	189
	<i>Gina M. Whitaker and Eric A. Accili</i>	
16.	The Use of FRET Microscopy to Elucidate Steady State Channel Conformational Rearrangements and G Protein Interaction with the GIRK Channels	199
	<i>Adi Raveh, Inbal Riven, and Eitan Reuveny</i>	
17.	The Voltage-Clamp Fluorometry Technique	213
	<i>Chris S. Gandhi and Riccardo Olcese</i>	
PART V. METHODS FOR STUDYING POTASSIUM CHANNELOPATHIES AND PHARMACOLOGICAL MODULATORS		
18.	Identification of Mutations in the Kir6.2 Subunit of the K _{ATP} Channel	235
	<i>Sarah E. Flanagan and Sian Ellard</i>	
19.	Modulation of Potassium Ion Channel Proteins Utilising Antibodies	247
	<i>Mark L. Dallas, Susan A. Deuchars, and Jim Deuchars</i>	
20.	Fluorescence-Based Tl ⁺ -Influx Assays as a Novel Approach for Characterization of Small-Conductance Ca ²⁺ -Activated K ⁺ Channel Modulators.	257
	<i>Susanne Jørgensen, Tina H. Johansen, and Tino Dyhring</i>	
21.	Rubidium Efflux as a Tool for the Pharmacological Characterisation of Compounds with BK Channel Opening Properties	267
	<i>Neil G. McKay, Robert W. Kirby, and Kim Lawson</i>	
22.	Recording hERG Potassium Currents and Assessing the Effects of Compounds Using the Whole-Cell Patch-Clamp Technique	279
	<i>Ray M. Hellwell</i>	
	<i>Index</i>	297
