Preface

Pancreatic ductal adenocarcinoma is the fifth leading cause of cancer death in the USA. Approximately 44,000 Americans were diagnosed with the disease in the past year. While the annual incidence for pancreatic cancer has been on an upswing trajectory for the past two decades, the 5-year survival rate has remained flat during the same period. Virtually all of the patients will die from it within 5 years. The pancreatic ductal adenocarcinoma is unique because its late onset in age, high mortality, small tumor samples infiltrated with normal cells (high desmoplasia), and a lack of early detection and effective therapies. Some of these characteristics have made studying this disease a challenge.

Pancreatic cancer develops as a result of the accumulation of genetic alterations in cancer-causing genes such as oncogenes and tumor-suppressor genes. Two decades ago, major progress has been made in identifying important oncogenes and tumor-suppressor genes for the disease and these genes have been verified by whole-genome sequencing this decade in both primary tumors and metastases. New efforts have also been invested in the generation of genetically engineered mouse models based on the genetic profile of human pancreatic cancer. In the past decade, increasing importance has also been attributed to tumor microenvironment, such as angiogenesis, immune cells, pancreatitis, metabolism, and tumor-associated fibroblasts. In this book, we review the classical techniques that have contributed to the advances in pancreatic research and introduce new strategies that we hope will add to the future breakthrough in the field of cancer biology.

This book provides a broad range of protocols for molecular, cellular, pathological, and statistical analyses of sporadic and familial pancreatic cancer. It covers topics from in vitro cell cultures to in vivo mouse models, DNA to protein manipulation, and genetic and epigenetic analyses to treatment development. These protocols were kindly contributed by scientists who have been working diligently in combating pancreatic cancer, and therefore we hope that this book will be an invaluable source of proven protocols to those who are interested in joining our fight against pancreatic cancer.

New York, NY, USA

## Contents

*Preface* .................................................. v  
*Contributors* .................................................. ix  

1 Identification and Analysis of Precursors to Invasive Pancreatic Cancer 1  
*Hanno Matthaei, Marco Dal Molin, and Anirban Maitra*  

2 Tissue Microarrays: Construction and Use 13  
*Helen Remotti*  

3 Immunohistochemistry of Pancreatic Neoplasia 29  
*Sukhwinder Kaur, Tomohiro Shimizu, Michael J. Baine, Sushil Kumar, and Surinder K. Batra*  

4 A Method for Conducting Highly Sensitive MicroRNA In Situ Hybridization and Immunohistochemical Analysis in Pancreatic Cancer 43  
*Lorenzo F. Sempere and Murray Korc*  

5 Optimal Molecular Profiling of Tissue and Tissue Components: Defining the Best Processing and Microdissection Methods for Biomedical Applications 61  
*Jaime Rodriguez-Canales, Jeffrey C. Hanson, Jason D. Hipp, Ulysses J. Balis, Michael A. Tangrea, Michael R. Emmert-Buck, and G. Steven Bova*  

6 Considerations for Sequencing Analyses of Pancreatic Cancer Progression and Metastasis 121  
*Alvin Makohon-Moore and Christine A. Iacobuzio-Donahue*  

7 DNA Methylation Analysis in Human Cancer 131  
*Eileen O’Sullivan and Michael Goggins*  

8 Quantitative Real-Time PCR Expression Analysis of Peripheral Blood Mononuclear Cells in Pancreatic Cancer Patients 157  
*Michael J. Baine, Kavita Mallya, and Surinder K. Batra*  

9 Development of a Cytokine-Modified Allogeneic Whole Cell Pancreatic Cancer Vaccine 175  
*Dan Laheru, Barbara Biedrzycki, and Elizabeth M. Jaffee*  

10 The Prevention and Genetics of Pancreatic Cancer: A Programmatic Approach 205  
*Aimee L. Lucas, Michelle M. Chang, Marla D. Lipsye, and Harold Frucht*  

11 Development of Orthotopic Pancreatic Tumor Mouse Models 215  
*Wanglong Qiu and Gloria H. Su*
12 Evaluating Dietary Compounds in Pancreatic Cancer Modeling Systems .................................................. 225
   Emman Mascariñas, Guido Eibl, and Paul J. Grippo
13 Quantification of Murine Pancreatic Tumors by High-Resolution Ultrasound ........................................ 249
   Stephen A. Sastra and Kenneth P. Olive
14 Microdissection and Culture of Murine Pancreatic Ductal Epithelial Cells .................................................. 267
   Yuliya Pylayeva-Gupta, Kyoung Eun Lee, and Dafna Bar-Sagi
15 Sphere-Forming Assays for Assessment of Benign and Malignant Pancreatic Stem Cells .................................. 281
   Yue J. Wang, Jennifer M. Bailey, Meritxell Rovira, and Steven D. Leach
16 Analysis of Transplanted Bone Marrow-Derived Cells in Chronic Pancreatitis ............................................... 291
   Christoph B. Westphalen, Frederic Marrache, and Timothy C. Wang
17 Analysis of the Potential for Pancreatic Cancer Metastasis In Vitro and In Vivo ................................................. 301
   Chen Huang and Keping Xie
18 The Use of Fluorescent Probes in the Study of Reactive Oxygen Species in Pancreatic Cancer Cells ...................... 321
   Richard D. Dinnen, Yuehua Mao, and Robert L. Fine
19 Analysis of Tumor-Associated Mucin Glycotopes by Western Transfer Methods ............................................... 331
   Vinayaga S. Gnanapragassam, Maneesh Jain, and Surinder K. Batra
20 Evaluating Tumor Angiogenesis .................................................. 341
   Minji K. Uh, Jessica Kandel, and Jan Kitajewski
21 Pooled shRNA Screenings: Experimental Approach .................................................................................. 353
   Ruth Rodriguez-Barrueco, Netonia Marshall, and Jose M. Silva
22 Pooled ShRNA Screenings: Computational Analysis .................................................................................. 371
   Jiyang Yu, Preeti Putcha, Andrea Califano, and Jose M. Silva
