

Part III

Algorithm and Experiments

The last part details on aspects of the implementation and experiments. This includes issues encountered and programmatic choices made in order to implement the algorithm. It also details the environment in which experiments were performed; this includes a presentation of the test data, an overview of the test cases and their purpose and the results of the experiments. The part ends with a conclusion, in which the novel developments needed to create the methodology are summarized and an overview for future research and other possible applications are presented.
