Acknowledgements

I would like to express my appreciation for those who supported me throughout the last number of years. Firstly, I would like to express my sincere gratitude to my advisor Prof. Dr. Paul J. J. Welfens for his continuous support, patience, motivation and immense knowledge. His guidance helped me at all times while researching and writing this book. Furthermore, he enabled me to participate in numerous international conferences and in the “SINCERE” project funded by the German DFG, where I could exchange my ideas with other researchers.

Besides my advisor, I would like to thank my co-advisor, Prof. Dr. Werner Bönnte, for his valuable support, insightful comments and encouragement throughout the research process.

My sincere thanks also go to my co-authors Jens Perret and Véronique Vasseur as well as Prof. Dr. René Kemp for the intensive and productive cooperation. Furthermore, I would like to thank Prof. Dr. Uta Pigorsch, Prof. Dr. André Betzer and indeed all the participants of the Brown Bag Seminar of the Schumpeter School for their many valuable comments and questions.

In addition, I give thanks to everyone who supported me with their advice, encouragement, friendship and patience. Among them my current and former colleagues Niyaz Valitov, Hung Lai, Sonja Jovicic, Christian Dienes, Arthur Korus, Fabian Baier, Nan Yu and all other members of the EIIW. Special thanks also go to David Hanrahan and Valeryia Siarheyeva for their editorial and technical support.

Last but not least, I would like to thank my family for supporting me mentally and emotionally throughout writing of this book and in my life in general.

Wuppertal, Germany
January 2018

Contents

1	Introduction	1
2	Determinants of Individual Renewable Energy Support: Empirical Findings for the UK	7
3	The Impact of Natural Disasters on Individuals’ Choice Between Economic Growth and Environmental Protection: Empirical Evidence from the World Values Survey	15
4	Environmental Motivations Behind Individuals’ Daily Energy Saving Behaviour: Evidence from Germany, The Netherlands and Belgium	31
5	Concluding Remarks	51
	Appendix A: Theoretical Model	57
	Appendix B: Survey Questionnaire “Energy Efficiency of Households in Cities”	65
	Appendix C: Daily Energy Saving Behaviour—Robustness Check	79
	References	83

List of Figures

Fig. 1.1	Conceptual framework	4
Fig. 2.1	Overview of hypotheses	10
Fig. 3.1	Overview of hypotheses	18
Fig. 4.1	Extreme weather events as an instrument	36
Fig. 5.1	Overview of key findings	52

List of Tables

Table 1.1	Overview of CO2 mitigation activities	3
Table 2.1	Dependent variable	11
Table 2.2	Independent variables	11
Table 2.3	Control variables	12
Table 2.4	Ordered logit estimation results	13
Table 3.1	Variable descriptions and summary statistics	23
Table 3.2	Probit estimation results based on full sample	25
Table 3.3	Probit estimation results based on high-income sub-sample	26
Table 3.4	Probit estimation results based on low-income sub-sample	27
Table 4.1	Descriptive statistics: daily energy saving behaviour	37
Table 4.2	Descriptive statistics: environmental motivations	38
Table 4.3	Descriptive statistics: control variables	39
Table 4.4	Ordered probit estimation results based on total sample	41
Table 4.5	Ordered probit estimation results based on German, Dutch and Belgium sub-samples	43
Table 4.6	Test for endogeneity	46
Table 4.7	Ordered probit and IV estimation results	47
Table A.1	Summary of effects and preferred level of renewable energy support	62
Table C.1	Ordered probit estimation results based on the German sub-sample	80
Table C.2	Ordered probit estimation results based on the Dutch sub-sample	81
Table C.3	Ordered probit estimation results based on the Belgian sub-sample	82
