

Advances in Spatial Science

The Regional Science Series

Series Editors

Manfred M. Fischer

Jean-Claude Thill

Jouke van Dijk

Hans Westlund

Advisory editors

Geoffrey J.D. Hewings

Peter Nijkamp

Folke Snickars

This series contains scientific studies focusing on spatial phenomena, utilising theoretical frameworks, analytical methods, and empirical procedures specifically designed for spatial analysis. *Advances in Spatial Science* brings together innovative spatial research utilising concepts, perspectives, and methods relevant to both basic science and policy making. The aim is to present advances in spatial science to an informed readership in universities, research organisations, and policy-making institutions throughout the world.

The type of material considered for publication in the series includes: Monographs of theoretical and applied research in spatial science; state-of-the-art volumes in areas of basic research; reports of innovative theories and methods in spatial science; tightly edited reports from specially organised research seminars. The series and the volumes published in it are indexed by Scopus.

Acknowledgements

The genesis of this book is a research collaboration that started in 2006 and has subsequently spawned 15 journal papers and book chapters. Over this period, we have fused our respective backgrounds in time series analysis and spatial data analysis. This volume summarizes our work on integrating spatial econometrics with the econometric analysis of nonstationary time series.

We owe a debt of thanks to a group of research assistants who have helped along the way since 2006. Some of them have also appeared as coauthors of earlier published papers on which the chapters of this book are based.

In chronological order, we would like to thank Olga Kazanina, Shalva Zonenshvili, Assaf Romm, Nadav ben Zeev, Dan Feldman, Ziv Rubin, and Dai Xieer. Their contributions created and upgraded the spatial data series on which the empirics of this book are based. In addition, they provided assistance in programming and executing the various Stata, Eviews and Matlab routines that underpin many of the estimation procedures presented here. We are also indebted to three anonymous reviewers whose critical and multiple readings of this text have sharpened many of our ideas.

Contents

1	Space and Time are Inextricably Interwoven	1
1.1	Introduction	1
1.2	Spatial Econometrics	3
1.3	Time and Space	5
1.4	Methodological Solipsism	9
1.5	The Chapters Ahead	10
1.6	Overview	15
	References	19
2	Time Series for Spatial Econometricians	21
2.1	Introduction: Spurious and Nonsense Regressions	21
2.2	The Functional Central Limit and Continuous Mapping Theorems	23
2.3	Univariate Unit Root Tests	25
2.4	Panel Unit Root Test	28
2.5	Cointegration (OLS)	30
2.6	Cointegration Methodologies	34
2.7	Panel Cointegration	37
2.8	Structural Vector Autoregressions	38
2.9	Causality, Exogeneity and Predictability	42
2.10	Cointegration, Causality and Identification	44
2.11	Autoregressive Conditional Heteroscedasticity (ARCH)	44
	References	46
3	Spatial Data Analysis and Econometrics	49
3.1	Introduction	49
3.2	The Nature of Spatial Data	50
3.3	Spatial Connectivity	52
3.4	The Spatial Lag Model	53
3.5	Spatial Autocorrelation	56
3.6	Spatial Heterogeneity	60

3.7	Modifiable Areal Unit Problem (MAUP)	62
3.8	Spatial Filtering	64
3.9	Spatial Panel Data	66
	References	68
4	The Spatial Connectivity Matrix	71
4.1	Introduction	71
4.2	Methodology	79
4.3	Empirical Application	85
	References	95
5	Unit Root and Cointegration Tests in Spatial Cross-Section	
	Data	97
5.1	Introduction	97
5.2	Data Generating Processes	102
5.3	Spatial Impulse Responses	104
5.4	Spatial Unit Root Tests	116
5.5	Spatial Cointegration Tests	120
	References	126
6	Spatial Vector Autoregressions	129
6.1	Introduction	129
6.2	SpVAR Theory	131
6.3	Econometric Issues	140
	6.3.1 Data	144
6.4	Results	145
	References	160
7	Unit Root and Cointegration Tests for Spatially Dependent Panel	
	Data	163
7.1	Introduction	163
7.2	Unit Roots	165
7.3	Spatial Panel Cointegration	178
7.4	Spatial Error Correction	188
7.5	Identification	190
7.6	Confidence Intervals	192
	References	195
8	Cointegration in Non-Stationary Spatial Panel Data	197
8.1	Introduction	197
8.2	Toy Model	200
8.3	Hypotheses	202
8.4	Data	205
8.5	Results	206
8.6	Spatial General Equilibrium	218
	References	231
