

SpringerBriefs in Quantitative Finance

Series Editors

Peter Bank, Institut für Mathematik, TU Berlin, Berlin, Germany

Pauline Barrieu, Department of Statistics, London School of Economics, London, UK

Lorenzo Bergomi, Société Générale, Paris-La Défense, Paris, France

Rama Cont, Department of Mathematics, Imperial College London, London, UK

Jakša Cvitanic, Division of Humanities and Social Sciences, California Institute of Technology, Pasadena, CA, USA

Matheus R. Grasselli, Department of Mathematics and Statistics, McMaster University, Hamilton, ON, Canada

Steven Kou, Department of Mathematics, National University of Singapore, Singapore, Singapore

Mike Ludkowsky, Department of Statistics and Applied Probability, University of California Santa Barbara, Santa Barbara, CA, USA

Vladimir Piterbarg, Rokos Capital Management, London, UK

Nizar Touzi, Centre de Mathématiques Appliquées, École Polytechnique, Palaiseau Cedex, France

SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.

Typical topics might include:

- A timely report of state-of-the art techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study

SpringerBriefs in Quantitative Finance showcase topics of current relevance in the field of mathematical finance in a compact format. Published titles will feature both academic-inspired work and more practitioner-oriented material, with a special focus on the application of recent mathematical techniques to finance, including areas such as derivatives pricing and financial engineering, risk measures and risk allocation, risk management and portfolio optimization, computational methods, and statistical modelling of financial data.

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Wide Popularity of the SABR	2
1.3	Simple Derivation	4
1.4	Modifications and Extensions of the SABR	8
1.4.1	PDE SABR Model	8
1.4.2	Negative Rates Extensions	8
1.4.3	Other Applications: SABR LMM Etc	10
1.5	CMS and the SABR	10
1.6	Approximation Accuracy and Its Improvements	11
1.6.1	Approximation Accuracy	11
1.6.2	Exact Solutions	13
1.6.3	More Accurate Approximations	14
1.7	About This Book	14
2	Exact Solutions to CEV Model with Stochastic Volatility	17
2.1	Introduction	17
2.2	Transforming CEV Process into the Bessel One	18
2.3	Solution Behavior Near Singular Point $x = 0$, Integrability, Flux	19
2.3.1	Flux	20
2.3.2	Indexes of Solution	21
2.3.3	Flux at Origin, Solution Selection	22
2.4	Laplace Transform	23
2.5	Probability Distributions	25
2.5.1	Solution for Laplace Transform F	25
2.5.2	Calculating Probability Distributions	26
2.5.3	Properties of Reflecting and Absorbing Distributions	27
2.5.4	Cumulative Probabilities	29
2.6	Back to CEV Model	30

2.6.1	Martingale Properties of the CEV Process	31
2.6.2	Option Pricing Through Chi Square Distributions	32
2.7	Alternative Expressions for CEV Option Values	34
2.8	CEV Model with Stochastic Volatility	36
2.8.1	CEV-CIR	37
2.8.2	SABR	38
2.9	Conclusion	39
3	Classic SABR Model: Exactly Solvable Cases	41
3.1	Introduction	41
3.2	Probability Density Functions for Free Normal and Log-Normal SABR, Probabilistic Approach	41
3.2.1	Normal SABR	43
3.2.2	Log-Normal SABR, $\beta = 1$	46
3.3	Deriving PDFs Using Kolmogorov Equations	48
3.3.1	The Normal SABR, ($\beta = 0$)	50
3.3.2	The Log-Normal SABR ($\beta = 1$)	51
3.4	McKean and Related Heat Kernels	59
3.4.1	Basics of Hyperbolic Geometry	59
3.4.2	Invariant Heat Kernels $G^{(n)}$	60
3.4.3	Noncanonical Kernel $G^{(2+1)}$	62
3.4.4	McKean Heat Kernel $G^{(2)}$	63
3.4.5	Cumulative Distribution Function $G(t, s)$	64
3.5	Option Value for the Free Normal SABR	65
3.5.1	Expression Using CDF $G(t, s)$	66
3.5.2	Alternative Expression Using the Normal CDF	68
3.6	Option Value for the Log-Normal SABR	71
3.7	The Zero Correlation Case	73
3.7.1	Moment Generating Function of τ^{-1}	73
3.7.2	Marginal Distribution of the Underlying F	76
3.7.3	Option Time Value	78
3.7.4	N and Log-N SABR Option Values as Limits of General Case	79
3.7.5	Large Strike Asymptotics	81
3.7.6	SABR Option Value, Close to ATM	83
3.8	Appendix A. Integrals with Square Root $\sqrt{\cosh s - \cosh u}$	85
4	Classic SABR Model: Heat Kernel Expansion and Projection on Solvable Models	87
4.1	Introduction	87
4.2	SABR Probability Density: Absorbing and Reflecting Solutions	88

- 4.3 Heat Kernel Expansion 92
- 4.4 Improved Approximation for Non-zero Correlation 94
- 4.5 Numerical Experiments 97
- 4.6 Conclusion 99
- 5 Extending SABR Model to Negative Rates 101**
 - 5.1 Introduction 101
 - 5.2 CEV Process 103
 - 5.3 SABR 106
 - 5.3.1 Zero-Correlation Case 106
 - 5.3.2 General Correlation Case 107
 - 5.3.3 Limiting Cases and Asymptotics 108
 - 5.4 Mixture SABR 109
 - 5.4.1 Parameter Intuition 110
 - 5.4.2 Reduced Parametrization 110
 - 5.5 Comparing the Shifted, Free, and Mixture SABRs 111
 - 5.6 Numerical Experiments 111
 - 5.6.1 Calibration to Real Data 111
 - 5.6.2 Approximation Accuracy Analysis 113
 - 5.6.3 Mixture SABR Numerical Experiments 115
- 6 Conclusion 123**
- References 125**
