Preface

This book includes extended and revised versions of selected papers from the 8th International Conference on Operations Research and Enterprise Systems (ICORES 2019), held in Prague, Czech Republic during February 19–21, 2019.

ICORES 2019 received 80 paper submissions from 35 countries, of which 11% are included in this book. These papers were selected based on several criteria including reviews provided by Program Committee members, session chair assessments, and also program chair perspectives across all papers included in the technical program. The authors of these selected papers were then invited to submit revised and extended versions of their papers for formal publication.

The purpose of annual ICORES is to bring together researchers, engineers, and practitioners interested in both advances and applications in the field of Operations Research. Two simultaneous tracks were held, one covering domain independent methodologies and technologies, and the other practical work developed in specific application areas.

The papers selected for this book contribute to Operations Research and our better understanding of complex Enterprise Systems. We commend each of the authors for their contributions, and gratefully thank our many reviewers who ensured high quality for this publication.
