# Preface

The massive use of hydrogen as an energy vector would be the last step towards the energy decarbonisation process, solving once and for all the greenhouse gases and pollutant emissions in our industrial and civil systems.

On the other hand, technological development of the production processes, storage, distribution and use of hydrogen is still quite far from a real competitiveness compared to traditional fossil fuels. To date, in fact, there is no market for hydrogen as an energy carrier and, in the near term, hydrogen economy will hardly replace fossil fuels, even if the environmental and societal issues related to energy production are perceived as urgent and solutions are absolutely required in the next years.

Enriched methane could be an intermediate step able to introduce hydrogen in our energy systems, using the consolidated natural gas infrastructures at competitive costs and leading to a significant reduction of the pollution, immediately applicable and without high structural costs: the new blend is a necessary step towards the “dream of hydrogen”.

The scope of this book is to present the most interesting and advanced technologies of enriched methane production and use, in order to update the readers on this topic and to clarify what is already available and on what the international scientific and technological communities have still to work at. At the end, the readers should have a clear panorama of both the enriched methane potentialities and on the step forward to be taken.

The realization of the book would have been impossible without the support of Profs. Luigi Marrelli and Prof. Diego Barba, who helped us in understanding and defining the focal and critical points of enriched methane production and applications.

The book aims to inspire young engineers and scientists to face the next technological challenges balancing the environmental requirements, the technological specifics and the market needs, always considering that any good idea should then be introduced in the market respecting its rules and should interact with the environment, reducing the impacts and the resources use.

# Contents

<b>Enriched Methane: A Ready Solution for the Transition Towards the Hydrogen Economy</b> . . . . .	1
Mauro Capocelli and Marcello De Falco	
<b>Enriched Methane Production Through a Low Temperature Steam Reforming Reactor</b> . . . . .	23
Marcello De Falco	
<b>Methane/Hydrogen Mixtures from Concentrated Solar Energy: The METISOL Project</b> . . . . .	37
Giampaolo Caputo, Domenico Mazzei and Mauro Francesco Sgroi	
<b>Low Temperature Steam Reforming Catalysts for Enriched Methane Production</b> . . . . .	53
Gloria Berlier	
<b>Two-Phase Anaerobic Digestion of Food Wastes for Hydrogen and Methane Production</b> . . . . .	75
Cristina Cavinato, David Bolzonella, Paolo Pavan and Franco Cecchi	
<b>Bio-production of Hydrogen and Methane Through Anaerobic Digestion Stages</b> . . . . .	91
Chiara Patriarca, Elena De Luca, Claudio Felici, Luigia Lona, Valentina Mazzurco Miritana and Giulia Massini	
<b>Biological Hydrogen Production from Lignocellulosic Biomass</b> . . . . .	111
Sudhanshu S. Pawar, Eoin Byrne and Ed.W.J. van Niel	
<b>Purification of Hydrogen-Methane Mixtures Using PSA Technology</b> . . . . .	129
Rosaria Augelletti, Sara Frattari and Maria Anna Murmura	
<b>Emissions and Efficiency of Turbocharged Lean-Burn Hydrogen-Supplemented Natural Gas Fueled Engines</b> . . . . .	147
James S. Wallace	

**Using Natural Gas/Hydrogen Mixture as a Fuel in a 6-Cylinder Stoichiometric Spark Ignition Engine . . . . . 175**  
Luigi De Simio, Michele Gambino and Sabato Iannaccone

**Enriched Methane for City Public Transport Buses . . . . . 195**  
Antonino Genovese and Fernando Ortenzi

**Exploring New Production Methods of Hydrogen/Natural Gas Blends . . . . . 215**  
Kas Hemmes

**Explosion Risks of Hydrogen/Methane Blends . . . . . 235**
