Acknowledgements

I owe thanks to many people, all of whom have helped me learn and attain some small amount of understanding in a field in which I received no formal training. I first and foremost thank those astronomers, historians, and other scholars who I have relied on to help me through the thickets of the material. I am a scholar who has wandered out of my own academic backyard and into theirs, and they have displayed admirable patience with my fumbling, misunderstandings, and ignorance. While there have been many people who have guided and assisted me in this project, I want to point out a few in particular. I would like to thank Cheri Adams and the staff of the Astronomy Department at the Boonshoft Museum of Discovery in Dayton, Ohio, for their wonderful public outreach and for helping to rekindle an interest in astronomy that had been dormant for years. Thanks also to the Miami Valley Astronomical Society, Mound Science and Energy Museum, and the Northern Colorado Astronomical Society, whose members offered me valuable feedback on various parts of what became this book. This book would have been impossible without the hard work and dedication of the people who preserve the amazing historical sites and artifacts of our shared human history, including the Cahokia Mounds Museum Society and the SunWatch Indian Village staff—especially site manager Andrew Sawyer and Curator of Anthropology Bill Kennedy, who saved me from a few boneheaded mistakes, the members of the Archaeological Survey of India tasked with maintaining such a difficult site in a difficult city as Delhi's Jantar Mantar, and the staff of the Adler Planetarium in Chicago, one of my favorite places on the Earth. Thanks also to my friend Leanne Martin, whose conversations about cultural astronomy through the years have helped me to think through much of this, and her husband Christopher Martin of Caltech, whose conversations about the GALEX discoveries and enthusiasm for astronomical discovery inspired me to conclude the section on contemporary astronomy with an account of his work. I would also like to thank a reviewer for Springer, whose insightful comments and suggestions both saved me from a number of (sometimes egregious) mistakes and helped me to further think through a number of issues.

Finally, thanks to my two sons, Siddhu and Francis, whose curiosity about the stars motivated me to learn more in order to teach them and encourage them not to lose that fascination. This book is dedicated to my parents, Gustavus Arius McLeod and Mary Alice McLeod, who instilled my love of learning, and who never gave up, even though they had every right to.

Contents

| | |
|---|-----|
| 1 Introduction | 1 |
| References | 8 |
| Part I Watchers of the Sun | |
| 2 The Americas | 11 |
| Cahokia | 11 |
| Mesoamerica | 16 |
| Maya Cosmology | 28 |
| 1054 for the Maya: Some Speculations | 39 |
| Mississippian Culture | 40 |
| References | 50 |
| 3 Supernova—Cataclysm in the Sky | 53 |
| Introduction | 53 |
| SN 1054 Elsewhere in the World | 60 |
| The Philosophy of Time—On Time, the Nature of Time, and Its Changing | 63 |
| Part II The Celestial Empire | |
| 4 The Chinese World | 75 |
| The Celestial Sphere | 75 |
| Astronomy and the Fall of the “New” Dynasty | 84 |
| Early Chinese Cosmology | 89 |
| Chinese Astronomical Systems and Tools | 95 |
| References | 108 |
| 5 Comet—A Sea of Dust and Ice | 109 |
| Historical Comets and Their Effects on Culture | 116 |
| The Philosophy of Unification in Early China | 118 |
| References | 125 |

Part III Calculation of Astronomical Wonders

6 India 129

Eating the Sun. 129

Early Indian Astronomy—Vedic 132

Siddhantic Astronomy 143

Indian Cosmology 144

Islamic Thought and Astronomy, and Its Influence on India 149

Return to Jai Singh 156
