

SpringerBriefs in Food, Health, and Nutrition

Editor-in-chief

Richard W. Hartel, University of Wisconsin—Madison, USA

Associate Editors

John W. Finley, Louisiana State University, USA

David Rodriguez-Lazaro, ITACyL, Spain

Yrjö Roos, University College Cork, Ireland

David Topping, CSIRO, Australia

Springer Briefs in Food, Health, and Nutrition present concise summaries of cutting edge research and practical applications across a wide range of topics related to the field of food science, including its impact and relationship to health and nutrition. Subjects include:

- Food chemistry, including analytical methods; ingredient functionality; physico-chemical aspects; thermodynamics
- Food microbiology, including food safety; fermentation; foodborne pathogens; detection methods
- Food process engineering, including unit operations; mass transfer; heating, chilling and freezing; thermal and non-thermal processing, new technologies
- Food physics, including material science; rheology, chewing/mastication
- Food policy
- And applications to:
 - Sensory science
 - Packaging
 - Food quality
 - Product development

We are especially interested in how these areas impact or are related to health and nutrition.

Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include:

- A timely report of state-of-the art analytical techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study
- A presentation of core concepts that students must understand in order to make independent contributions
