Historical-Analytical Studies on Nature, Mind and Action provides a forum for integrative, multidisciplinary, analytic studies in the areas of philosophy of nature, philosophical anthropology, and the philosophy of mind and action in their social setting. Tackling these subject areas from both a historical and contemporary systematic perspective, this approach allows for various “paradigm-straddlers” to come together under a common umbrella. Digging down to the conceptual-historical roots of contemporary problems, one will inevitably find common strands which have since branched out into isolated disciplines. This series seeks to fill the void for studies that reach beyond their own strictly defined boundaries not only synchronically (reaching out to contemporary disciplines), but also diachronically, by investigating the unquestioned contemporary presumptions of their own discipline by taking a look at the historical development of those presumptions and the key concepts they involve. This series, providing a common forum for this sort of research in a wide range of disciplines, is designed to work against the well-known phenomenon of disciplinary isolation by seeking answers to our fundamental questions of the human condition: What is there? -- What can we know about it? -- What should we do about it? – indicated by the three key-words in the series title: Nature, Mind and Action. This series will publish monographs, edited volumes, revised doctoral theses and translations.
