<i>List of Figures and Tables</i>	vii
<i>List of Contributors</i>	xvi
Introduction <i>Stephen Satchell</i>	1
1 Performance of UK Equity Unit Trusts <i>Garrett Quigley and Rex A. Siquefield</i>	9
2 A Demystification of the Black–Litterman Model: Managing Quantitative and Traditional Portfolio Construction <i>Stephen Satchell and Alan Scowcroft</i>	36
3 Tracking Error: <i>Ex Ante</i> Versus <i>Ex Post</i> Measures <i>Stephen E. Satchell and Soosung Hwang</i>	54
4 Performance Clustering and Incentives in the UK Pension Fund Industry <i>David Blake, Bruce N. Lehmann and Allan Timmermann</i>	63
5 Do Hedge Funds Add Value to a Passive Portfolio? Correcting for Non-Normal Returns and Disappearing Funds <i>Roy Kouwenberg</i>	95
6.1 The Performance of Value and Momentum Investment Portfolios: Recent Experience in the Major European Markets—Parts 1 and 2 <i>Ron Bird and Jonathan Whitaker</i>	127
6.2 The Performance of Value and Momentum Investment Portfolios: Recent Experience in the Major European Markets—Parts 1 and 2 <i>Ron Bird and Jonathan Whitaker</i>	164
7 Cointegration Portfolios of European Equities for Index Tracking and Market Neutral Strategies <i>Christian L. Dunis and Richard Ho</i>	191
8 Emerging Markets of South-East and Central Asia: Do They Still Offer a Diversification Benefit? <i>Christian L. Dunis and Gary Shannon</i>	224

9	Measuring Investor Sentiment in Equity Markets <i>Arindam Bandopadhyaya and Anne Leah Jones</i>	258
10	Incorporating Estimation Errors into Portfolio Selection: Robust Portfolio Construction <i>Sebastián Ceria and Robert A. Stubbbs</i>	270
11	Best-Practice Pension Fund Governance <i>Gordon L. Clark and Roger Urwin</i>	295
12	Fundamental Indexation in Europe <i>Julius Hemminki and Vesa Puttonen</i>	323
13	Fundamental Indexation: An Active Value Strategy in Disguise <i>David Blitz and Laurens Swinkels</i>	331
14	A Robust Optimization Approach to Pension Fund Management <i>Garud Iyengar and Alfred Ka Chun Ma</i>	339
	<i>Index</i>	364

List of Figures and Tables

Figures

4.1	The dispersion of excess equity returns of UK and US pension funds	77
7.1	Sharpe ratio for EuroStoxx50 and two tracking portfolios (January 2002–June 2003)	203
7A4.1	Portfolio weights in ten-stock tracking portfolio with monthly rebalancing	218
7A4.2	Portfolio weights in ten-stock tracking portfolio with quarterly rebalancing	218
8.1	Kalman model for South-East Asia with UK as the ‘established’ market	241
8.2	Kalman model for South-East Asia with US as the ‘established’ market	242
8.3	Kalman model for South-East Asia with Japan as the ‘established’ market	242
8.4	Kalman model for Central Asia with UK as the ‘established’ market	243
8.5	Kalman model for Central Asia with US as the ‘established’ market	243
8.6	Kalman model for Central Asia with Japan as the ‘established’ market	244
9.1	Equity Market Sentiment Index: 2nd July, 2003–1st July, 2004	263
10.1	Feasible region for example 1	275
10.2	Markowitz Efficient Frontiers	278
10.3	Markowitz benchmark-relative efficient frontiers	279
10.4	Robust efficient frontiers	288
10.5	Robust Active Return Efficient Frontiers	289
11.1	Schematic of governance budget and risk budget	302
11.2	Governance types	312

14.1	Current yield curve	354
14.2	Liability as a function of time	354
14.3	Worst-case contribution as a function of equity ratio	356

Tables

1.1A	Summary statistics for UK market, value and small stock indices, t-bills and factor returns in sterling, 1978–97	16
1.1B	Summary performance and CAPM and three-factor regressions of all UK equity unit trusts from 1978 to 1997 (regressions are based on monthly returns)	17
1.2	Summary performance, CAPM and three-factor regressions of UK equity unit trusts from 1978 to 1997 by AUTIF sector (regressions are based on monthly returns)	19
1.3	Portfolios of unit trusts from 1978 to 1997 based on prior three-year three-factor model SMB loadings (regressions are based on monthly returns)	21
1.4	Portfolios of unit trusts from 1978 to 1997 based on prior three-year three-factor model HML loadings (regressions are based on monthly returns)	23
1.5	Portfolios of unit trusts from 1978 to 1997 based on prior three-year three-factor model SMB and HML loadings (regressions are based on monthly returns)	24
1.6	Portfolios of unit trusts from 1981 to 1997 based on prior one-year return (regressions are based on monthly returns)	25
1.7	Portfolios of unit trusts from 1981 to 1997 based on prior three-year three-factor model alpha (regressions are based on monthly returns)	27
1.8	Three-factor-model alphas for portfolios that are formed based on prior three-year three-factor-model alphas, net and gross of total annual expenses	28
1.9	Three-factor-model alphas, net and gross of total expenses, for portfolios that are formed first on the prior three-year SMB, and then on the prior three-year three-factor-model alphas	32
2.1	Bayesian parameters	41
2.2	Forecast results	42

2.3	Optimisation parameters	42
2.4	Optimisation results	43
2.5	Bayesian parameters	43
2.6	Forecast results	44
2.7	Optimisation parameters	44
2.8	Optimisation results	45
2.9	Posterior probabilities	49
4.1	Fractiles of UK pension fund total and risk-adjusted returns by asset class, 1986–94 (average annual percentages)	71
4.2	UK pension fund performance in UK equities against a variety of benchmarks, 1986–94 (average annual percentages)	74
4.3	Fractiles of UK pension funds' truncation-adjusted performance estimates for UK equities and the total portfolio, 1986–94 (average annual percentages)	81
4.4.	UK pension funds' alpha values in different asset categories: quartile-sorted according to fund size, 1986–94 (average annual percentages)	83
4.5	UK pension funds' alpha values in different asset categories: quartile-sorted according to previous-year returns, 1986–94 (average annual percentages)	86
4.6	Fractiles of UK pension funds' alpha estimates, correcting for size- and past-performance-sorted quartile effects, 1987–94 (average annual percentages)	88
5.1	Hedge fund styles in the Zurich Hedge Fund Universe	98
5.2	Number of hedge funds, Jan 1995–Nov 2000	100
5.3	Hedge fund statistics, Jan 1995–Nov 2000	101
5.4	Hedge fund return correlation with indices (average), Jan 1995–Nov 2000	103
5.5	Hedge fund statistics: Surviving vs disappearing funds, Jan 1995–Nov 2000	106
5.6	Hedge fund alpha and normality I, Jan 1995–Nov 2000	110
5.7	Hedge fund alpha and normality II, Jan 1995–Nov 2000	112
5.8	Hedge fund alphas: Surviving vs disappearing funds, Jan 1995–Nov 2000	113

5.9	Hedge fund models and alpha, Jan 1995–Nov 2000	114
5.10	Hedge fund models R^2 and significance of coefficients, Jan 1995–Nov 2000	116
5.11	Alpha persistence, model 1 (S&P 500 and Nasdaq)	118
5.12	Alpha persistence, model 2 (S&P 500, Nasdaq and Option Selling Strategies)	120
5.13	Sharpe ratio persistence, with 36-month track record requirement	122
6.1.1	Sample size by country	133
6.1.2	Equally weighted returns (per cent per month) across value portfolios created using four criteria and with differing holding periods (combined markets, January 1990 to June 2002)	137
6.1.3	Characteristics of book-to-market and sales-to-price portfolios (combined markets, January 1990 to June 2002)	139
6.1.4	Market-weighted returns (per cent per month) for book-to-market and sales-to-price portfolios (combined markets, January 1990 to May 2002)	141
6.1.5	Market-weighted and size-adjusted returns (per cent per month) for book-to-market and sales-to-price portfolios (combined markets, January 1990 to June 2002)	142
6.1.6	Market-weighted returns (per cent per month) for country-corrected book-to-market and sales-to-price portfolios (combined markets, January 1990 to June 2002)	143
6.1.7	Equally weighted returns (per cent per month) for book-to-market portfolios (individual markets, January 1990 to June 2002)	145
6.1.8	Market-weighted returns (per cent per month) for book-to-market portfolios (individual markets, January 1990 to June 2002)	146
6.1.9	Equally weighted returns (per cent per month) across momentum portfolios created using 6- and 12-month price momentum (combined markets, January 1990 to June 2002)	149

6.1.10	Characteristics of price momentum portfolios (combined markets, January 1990 to June 2002)	150
6.1.11	Market-weighted returns (per cent per month) for price momentum portfolios (combined markets, January 1990 to June 2002)	151
6.1.12	Market-weighted returns (per cent per month) for country-corrected price momentum portfolios (combined markets, January 1990 to June 2002)	152
6.1.13	Market-weighted returns (per cent per month) for 6-month price momentum portfolios (individual markets, January 1990 to June 2002)	153
6.1.14	Equally weighted returns (per cent per month) for earnings momentum portfolios (combined markets, January 1990 to June 2002)	155
6.1.15	Characteristics of earnings momentum portfolios (combined markets, January 1990 to June 2002)	156
6.1.16	Market-weighted returns (per cent per month) for earnings momentum portfolios (combined markets, January 1990 to June 2002)	157
6.1.17	Market-weighted returns (per cent per month) for earnings momentum portfolios (agree) (individual markets, January 1990 to June 2002)	159
6.2.1	Sample size by country	169
6.2.2	Correlations between the monthly market weighted excess returns of portfolios formed using value and price momentum criterion and holding for 12 months (combined markets, January 1990 to June 2002)	173
6.2.3	Equally weighted returns (per cent per month) across portfolios created using the intersection of book-to-market and 6-month price momentum (combined markets, January 1990 to June 2002)	174
6.2.4	Equally weighted returns (per cent per month) across portfolios created using both book-to-market and agreement (combined markets, January 1990 to June 2002)	175
6.2.5	Characteristics of combinations of book-to-market with 6-month price momentum and agreement (combined markets, January 1990 to June 2002)	177

6.2.6	Size-adjusted and market weighted returns (per cent per month) across portfolios created using both book-to-market and 6-month price momentum (combined markets, January 1990 to June 2002)	178
6.2.7	Size-adjusted and market weighted returns (per cent per month) across portfolios created using both book-to-market earnings momentum (agree) (combined markets, January 1990 to June 2002)	179
6.2.8	Size-adjusted and market weighted returns (per cent per month) across portfolios created by combining both book-to-market (50 per cent) and agreement (50 per cent) (combined markets, January 1990 to June 2002)	180
6.2.9	Comparing the performance calculated using market weighted and size-adjusted returns between the best and worst ranking portfolios formed by book-to-market and price momentum with those formed by book-to-market and agreement (per cent per month) (combined markets, January 1990 to June 2002)	182
6.2.10	Size-adjusted and market weighted returns (per cent per month) across selected portfolios created by combining value, earnings momentum and dispersion (combined markets, January 1990 to June 2002)	184
6.2.11	Characteristics of combinations of selected book-to-market with 6-month price momentum portfolios further differentiated by dispersion (combined markets, January 1990 to June 2002)	184
6.2.12	Size-adjusted and market weighted returns (per cent per month) across selected portfolios created by combining value, earnings momentum and dispersion (individual markets, January 1990 to June 2002)	186
7.1	In-sample results for EuroStoxx50 and tracking portfolios (January 1999–December 2001)	202
7.2	Out-of-sample results for EuroStoxx50 and tracking portfolios (January 2002–June 2003)	202
7.3	Out-of-sample results for EuroStoxx50 and ten-stock tracking portfolios with various rebalancing frequencies (January 2002–June 2003)	204
7.4	Average out-of-sample results for ten-stock long/short portfolios (January 2002–June 2003)	205

7.5	In-sample results for ten-stock long/short portfolios (January 1999–December 2001)	206
7.6	Out-of-sample results for ten-stock long/short portfolios (January 2002–June 2002)	208
7.7	Out-of-sample results for ten-stock long/short portfolios (July 2002–December 2002)	209
7.8	Out-of-sample trading simulation of successive optimal long/short portfolio combinations rebalanced every six months and EuroStoxx50 (January 2002–June 2003)	210
7.9	Out-of-sample trading simulation of successive optimal long/short portfolio combinations rebalanced every three months and EuroStoxx50 (January 2002–June 2003)	210
7A5.1	Out-of-sample results for ten-stock long/short portfolios (January–March 2002)	219
7A5.2	Out-of-sample results for ten-stock long/short portfolios (April–June 2002)	220
7A5.3	Out-of-sample results for ten-stock long/short portfolios (July–September 2002)	221
7A5.4	Out-of-sample results for ten-stock long/short portfolios (October–December 2002)	222
7A5.5	Out-of-sample results for ten-stock long/short portfolios (January–March 2003)	223
8.1	Opening and closing times of the stock markets under study	231
8.2	Descriptive statistics of log returns of ten stock markets	233
8.3	Correlation of log returns from Divecha <i>et al.</i> (February 1986 to March 1991)	237
8.4	Correlation of log returns (31st August, 1999 to 29th August, 2003)	238
8.5	Changes in correlation of log returns	239
8.6	Optimal portfolio for a US investor (30th August, 2002 to 29th August, 2003)	245
8.7	Portfolio out-of-sample performance (1st September, 2003 to 5th July, 2004)	245
8.8	US portfolio with 15 per cent limit on funds invested abroad (30th August, 2002 to 29th August, 2003)	246

8.9	US portfolio with 20 per cent limit on funds invested abroad (30th August, 2002 to 29th August 2003)	246
8.10	US portfolio with 25 per cent limit on funds invested abroad (30th August, 2002 to 29th August, 2003)	246
8.11	Out-of-sample performance for the three diversified portfolios (1st August, 2003 to 5th August, 2004)	246
8A1	UK, Indonesia, Philippines and Malaysia	250
8A2	US, Indonesia, Philippines and Malaysia	250
8A3	Japan, Indonesia, Philippines and Malaysia	251
8A4	UK, Korea, China, India and Taiwan	251
8A5	US, Korea, China, India and Taiwan	251
8A6	UK, Korea, China, India and Taiwan	251
9.1	Measures of market sentiment used in prior research	260
9.2	Risk categorisation of daily EMSI figures	264
9.3	News and EMSI	265
9.4	Explanation of Massachusetts Bloomberg Index returns using ordinary least squares estimates	266
9.5	Explanation of Massachusetts Bloomberg Index returns using polynomial distributed lagged model estimates	266
10.1	Expected returns and standard deviations for example 1	275
10.2	Optimal portfolios for example 1	276
10.3	Extreme expected return for optimal portfolios	279
10.4	Backtest results for long-short dollar-neutral strategy	290
10.5	Backtest results for long-only maximum total return strategy	291
10.6	Backtest results for long-only active strategy	291
11.1	Best-practice factors	311
11.2	Best-practice factors by type of fund	313
11.3	Investment value drivers	315
11.4	Best-practice board/investment committees	317
12.1	The comparison of performance of the Reference Portfolio and the DJ Euro Stoxx 50 index	327

12.2	This table shows the comparison of returns for the observation period from 1996 to 2006. The returns show a theoretical growth in value of the portfolio, assuming that dividends are re-invested to purchase additional units of equity at the closing price applicable on the ex-dividend date. The Reference portfolio is a capitalisation-weighted portfolio based on the DJ Euro Stoxx 50 index	328
13.1	Regression results	334
14.1	Worst-case contribution as a function of equity ratio	356
14.2	Worst-case contribution as a function of time	357
14.3	Simulation results	359

List of Contributors

Arindam Bandopadhyaya is Professor of Finance and Director of Financial Services Forum and Online Programs at the University of Massachusetts at Boston, USA.

Ron Bird is Professor Emeritus at the University of Technology Sydney, Australia.

David Blake is Director of the Pensions Institute and Professor at Cass Business School, City University of London, UK.

David Blitz is Head of Quantitative Equities Research at Robeco, The Netherlands.

Sebastian Ceria is Chief Executive Officer of Axioma. Before founding Axioma, Ceria was Associate Professor of Decision, Risk and Operations at Columbia Business School, USA, from 1993 to 1998. Ceria has worked extensively in the area of optimization and its application to portfolio management. He is the author of many articles in publications including *Management Science*, *Mathematical Programming*, and *Optima and Operations Research*.

Gordon L. Clark is Professor and Director of the Smith School at Oxford University, is Sir Louis Matheson Distinguished Visiting Professor in the Department of Banking and Finance at Monash University, Australia, and is Visiting Professor at Stanford University, USA. His most recent books are the co-authored *Saving for Retirement: Intention, Context and Behaviour* and *Sovereign Wealth Funds*. He is completing with Ashby Monk *Institutional Investors in Global Markets: An Organizational Perspective* to be published in 2017.

Christian L. Dunis is a founding partner at Acanto Research, Germany, and Emeritus Professor of Banking & Finance, Liverpool John Moores University, UK.

Julius Hemminki holds an MSc in Economics from Aalto University School of Business (former by Helsinki School of Economics), Finland. He works as senior key account manager at Klarna, a Swedish e-commerce company that provides payment services for online storefronts.

Richard Ho previously worked at Barclays Capital Ltd.

Soosung Hwang is Professor of Financial Economics in the Department of Economics, Sungkyunkwan University, Seoul, Korea. He received his PhD from the Cambridge University, UK, and has worked as a fund manager and a consultant in finance. His research interests include finance, financial econometrics, real estate economics and finance, and behavioural finance.

Garud Iyengar is a professor in the Department of Industrial Engineering and Operations Research, Columbia University, USA.

Roy Kouwenberg is Associate Professor and Chair of the PhD Program at Mahidol University, Thailand, and visiting researcher at the Erasmus School of Economics, The Netherlands. His research interests include investments, quantitative finance and behavioural economics. His work has been published in the *Journal of Financial Economics*, the *Review of Economics & Statistics* and *Management Science*, amongst others. Roy received his PhD in Finance from Erasmus University Rotterdam and he is a CFA charterholder. The article (Chapter 5 of this book) was written while Roy was working at AEGON Asset Management, The Hague.

Anne Leah Jones is Assistant Professor of Accounting at Suffolk University, Boston, USA.

Bruce N. Lehmann is a Professor of Economics and Finance at the School of Global Policy and Strategy at the University of California, San Diego, USA.

Alfred Ka Chun Ma is Managing Director, CAC at Algo Financial Services Group.

Vesa Puttonen is Professor of Finance at Aalto University School of Business, Finland. His areas of expertise include topics such as financial institutions, financial services marketing, mutual funds and behavioural finance. He also serves as a board member at Taaleri Private Bank, Finland.

Garrett Quigley is co-founder and co-Chief Investment Officer of Global Systematic Investors LLP. Prior to founding GSI, Garrett was the Investment Director at Dimensional Fund Advisors Ltd, London (DFAL) where he served as Chairman of the London Investment Committee. He has presented widely on investment strategy and research at conferences and seminars and is currently a Director of INQUIRE UK.

He received his BA from Trinity College, Dublin and holds an MSc in Finance from London Business School, UK.

Stephen Satchell is Professor of Finance at Sydney University, Australia. His research covers a number of topics in the broad areas of econometrics, finance, risk measurement and utility theory, and his current research looks at alternative methods of portfolio construction and risk management, as well as work on non-linear dynamic models. Stephen has strong links with Inquire (Institute for Quantitative Investment Research), is on the management committee of LQG (London Quant Group), and is a Fellow of Trinity College Cambridge.

Alan Scowcroft has retired after having served as Managing Director of UBS Ltd.

Gary Shannon was an associate researcher with CIBEF.

Rex A. Siquefield is co-founder and former co-chairman of Dimensional Fund Advisors. He also is co-founder of the Show-Me Institute. He has contributed numerous articles to books and academic and professional journals. Best known among these are the studies of rates of return in *Stocks Bonds, Bills and Inflation*, which he co-authored with Roger Ibbotson. He was one of the first successfully to apply the academic findings of modern finance to money management. In the early 1970s he and his colleagues at American National Bank of Chicago pioneered many of the first index funds in the US. Rex received his BS from St Louis University and his MBA from the University of Chicago.

Robert A. Stubbs is Vice President, Strategic Innovation at Axioma, Inc. Stubbs joined Axioma in 2000 and is the head of the recently launched Innovation Lab at Axioma. Prior to his most recent position, Stubbs was the head of research at Axioma for more than ten years. In this role, he developed a robust portfolio in optimization technology and made numerous contributions to classical portfolio optimization techniques such as developing an algorithm for solving portfolio rebalancing problems with a limit on the number of assets in the portfolio.

Laurens Swinkels teaches in the Finance Department of the Erasmus School of Economics (ESE) at Erasmus University Rotterdam and Erasmus Research Institute of Management (ERIM), The Netherlands.

Allan Timmermann is Atkinson/Epstein Endowed Chair and Professor of Finance at Rady School of Management at the University of San Diego, USA. He is also Co-Director of the Master of Finance Program at the school.

Roger Urwin is Global Head of Investment Content at Towers Watson, UK.

Jonathan Whitaker worked as a research analyst with GT Capital in Melbourne at the time of writing, having previously been a research associate in the Finance and Economics School at the University of Technology, Sydney (UTS), Australia. He holds an honours degree in Physics from UTS and a Masters in Statistics from the University of New South Wales. He previously held a number of positions in medical physics.
