

SpringerBriefs in Molecular Science

Chemistry of Foods

Series editor

Salvatore Parisi, Industrial Consultant, Palermo, Italy

The series Springer Briefs in Molecular Science: Chemistry of Foods presents compact topical volumes in the area of food chemistry. The series has a clear focus on the chemistry and chemical aspects of foods, topics such as the physics or biology of foods are not part of its scope. The Briefs volumes in the series aim at presenting chemical background information or an introduction and clear-cut overview on the chemistry related to specific topics in this area. Typical topics thus include: - Compound classes in foods – their chemistry and properties with respect to the foods (e.g. sugars, proteins, fats, minerals, ...) - Contaminants and additives in foods – their chemistry and chemical transformations - Chemical analysis and monitoring of foods - Chemical transformations in foods, evolution and alterations of chemicals in foods, interactions between food and its packaging materials, chemical aspects of the food production processes - Chemistry and the food industry – from safety protocols to modern food production The treated subjects will particularly appeal to professionals and researchers concerned with food chemistry. Many volume topics address professionals and current problems in the food industry, but will also be interesting for readers generally concerned with the chemistry of foods. With the unique format and character of Springer Briefs (50 to 125 pages), the volumes are compact and easily digestible. Briefs allow authors to present their ideas and readers to absorb them with minimal time investment. Briefs will be published as part of Springer's eBook collection, with millions of users worldwide. In addition, Briefs will be available for individual print and electronic purchase. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, easy-to-use manuscript preparation and formatting guidelines, and expedited production schedules. Both solicited and unsolicited manuscripts focusing on food chemistry are considered for publication in this series.

Contents

1 Optimising Lactic Acid Cheese Packaging Systems	1
Caterina Barone, Marcella Barbera, Michele Barone, Salvatore Parisi and Izabela Steinka	
1.1 Consumer Preferences Concerning Lactic Acid Cheese Packaging	2
1.2 Characteristics of Packaging Used for Lactic Acid Cheese and Cottage Cheese	6
1.3 Influence of Physical Qualities of Packaging Materials on Packaging Functionality	8
1.4 Microbiological Interactions Versus Quality of Packaging Used for Lactic Acid Cheese	12
1.5 Optimization of Packaging Used for Lactic Acid Cheeses. Suggestions	15
1.6 Verification of Necessity for Optimization of Packaging Materials for Lactic Acid Cheese	16
1.7 Changing the Packaging System. Proposals	18
References	21
2 Evolutive Profiles of Caseins and Degraded Proteins in Industrial Cow's Milk Curds	25
Caterina Barone, Marcella Barbera, Michele Barone, Salvatore Parisi and Izabela Steinka	
2.1 Introduction	26
2.2 Evolutive Profiles of Selected Cow's Milk Curds During Storage	28
2.2.1 Materials	28
2.2.2 Analytical Methods	29
2.2.3 Results and Discussion	29
2.3 Conclusions	31
References	31

3	The Production of Industrial Cow's Milk Curds	35
	Caterina Barone, Marcella Barbera, Michele Barone, Salvatore Parisi and Izabela Steinka	
3.1	Introduction	36
3.2	The Production of Industrial Curds. A Practical Description	37
3.2.1	Industrial Curds. Production Steps	38
	References.	41
4	Chemical Correlations Between Industrial Curds and Final Cheeses. Can Cheesemakers Standardise Productions?	43
	Caterina Barone, Marcella Barbera, Michele Barone, Salvatore Parisi and Izabela Steinka	
4.1	Cheeses Depend on Curds	44
4.2	Cheeses and Ready-to-Use Curds. Advantages and Challenges	44
	References.	45
