Acknowledgments

We would like to express our gratitude to those who helped us and made the completion of this book possible.

First of all, we are deeply indebted to the Springer editorial team and particularly Martina BIHN whose support and encouragement allowed us to finalize this project.

Furthermore, we have benefited from helpful comments by colleagues and we would like to acknowledge the help of Maurice BASLÉ, Arthur CHARPENTIER, Pauline CHAUVIN, Salah GHABRI, and Christophe TAVÉRA. Of course, any mistake that may remain is our entire responsibility.

In addition, we are grateful to our students who have been testing and experimenting our lectures for so many years. Parts of the material provided here have been taught at the Bachelor and Master levels, in France and abroad. Several students and former students have been helping us improve the book. We really appreciated their efforts and are very grateful to them: Erwan AUTIN, Benoît CARRÉ, Aude DAILLÈRE, Kristýna DOSTÁLOVÁ, and Adrien VEZIE.

Finally, we would like to express our sincere gratefulness to our families for their continuous support and encouragement.

Contents

1	Statistical Tools for Program Evaluation: Introduction and Overview	1
1.1	The Challenge of Program Evaluation	1
1.2	Identifying the Context of the Program	4
1.3	Ex ante Evaluation Methods	6
1.4	Ex post Evaluation	9
1.5	How to Use the Book?	11
	Bibliography	12
 Part I Identifying the Context of the Program		
2	Sampling and Construction of Variables	15
2.1	A Step Not to Be Taken Lightly	15
2.2	Choice of Sample	16
2.3	Conception of the Questionnaire	22
2.4	Data Collection	27
2.5	Coding of Variables	33
	Bibliography	43
3	Descriptive Statistics and Interval Estimation	45
3.1	Types of Variables and Methods	45
3.2	Tabular Displays	47
3.3	Graphical Representations	54
3.4	Measures of Central Tendency and Variability	64
3.5	Describing the Shape of Distributions	69
3.6	Computing Confidence Intervals	77
	References	87
4	Measuring and Visualizing Associations	89
4.1	Identifying Relationships Between Variables	89
4.2	Testing for Correlation	92
4.3	Chi-Square Test of Independence	99

4.4	Tests of Difference Between Means	105
4.5	Principal Component Analysis	113
4.6	Multiple Correspondence Analysis	126
	References	135
5	Econometric Analysis	137
5.1	Understanding the Basic Regression Model	137
5.2	Multiple Regression Analysis	147
5.3	Assumptions Underlying the Method of OLS	153
5.4	Choice of Relevant Variables	156
5.5	Functional Forms of Regression Models	164
5.6	Detection and Correction of Estimation Biases	167
5.7	Model Selection and Analysis of Regression Results	174
5.8	Models for Binary Outcomes	180
	References	187
6	Estimation of Welfare Changes	189
6.1	Valuing the Consequences of a Project	189
6.2	Contingent Valuation	191
6.3	Discrete Choice Experiment	200
6.4	Hedonic Pricing	211
6.5	Travel Cost Method	216
6.6	Health-Related Quality of Life	221
	References	230
 Part II Ex ante Evaluation		
7	Financial Appraisal	235
7.1	Methodology of Financial Appraisal	235
7.2	Time Value of Money	238
7.3	Cash Flows and Sustainability	244
7.4	Profitability Analysis	249
7.5	Real Versus Nominal Values	255
7.6	Ranking Investment Strategies	257
7.7	Sensitivity Analysis	263
	References	266
8	Budget Impact Analysis	269
8.1	Introducing a New Intervention Amongst Existing Ones	269
8.2	Analytical Framework	271
8.3	Budget Impact in a Multiple-Supply Setting	275
8.4	Example	277
8.5	Sensitivity Analysis with Visual Basic	281
	References	288

9	Cost Benefit Analysis	291
9.1	Rationale for Cost Benefit Analysis	291
9.2	Conceptual Foundations	294
9.3	Discount of Benefits and Costs	299
9.4	Accounting for Market Distortions	306
9.5	Deterministic Sensitivity Analysis	311
9.6	Probabilistic Sensitivity Analysis	313
9.7	Mean-Variance Analysis	321
	Bibliography	324
10	Cost Effectiveness Analysis	325
10.1	Appraisal of Projects with Non-monetary Outcomes	325
10.2	Cost Effectiveness Indicators	328
10.3	The Efficiency Frontier Approach	336
10.4	Decision Analytic Modeling	342
10.5	Numerical Implementation in R-CRAN	351
10.6	Extension to QALYs	357
10.7	Uncertainty and Probabilistic Sensitivity Analysis	358
10.8	Analyzing Simulation Outputs	371
	References	382
11	Multi-criteria Decision Analysis	385
11.1	Key Concepts and Steps	385
11.2	Problem Structuring	388
11.3	Assessing Performance Levels with Scoring	390
11.4	Criteria Weighting	395
11.5	Construction of a Composite Indicator	398
11.6	Non-Compensatory Analysis	401
11.7	Examination of Results	410
	References	416
 Part III Ex post Evaluation		
12	Project Follow-Up by Benchmarking	419
12.1	Cost Comparisons to a Reference	419
12.2	Cost Accounting Framework	423
12.3	Effects of Demand Structure and Production Structure on Cost	426
12.4	Production Structure Effect: Service-Oriented Approach	433
12.5	Production Structure Effect: Input-Oriented Approach	436
12.6	Ranking Through Benchmarking	440
	References	441

13	Randomized Controlled Experiments	443
13.1	From Clinical Trials to Field Experiments	443
13.2	Random Allocation of Subjects	448
13.3	Statistical Significance of a Treatment Effect	453
13.4	Clinical Significance and Statistical Power	463
13.5	Sample Size Calculations	471
13.6	Indicators of Policy Effects	474
13.7	Survival Analysis with Censoring: The Kaplan-Meier Approach	480
13.8	Mantel-Haenszel Test for Conditional Independence	483
	References	487
14	Quasi-experiments	489
14.1	The Rationale for Counterfactual Analysis	489
14.2	Difference-in-Differences	492
14.3	Propensity Score Matching	498
14.4	Regression Discontinuity Design	512
14.5	Instrumental Variable Estimation	519
	References	530
