Foreword

Robots! Robots on Mars and in oceans, in hospitals and homes, in factories and schools; robots fighting fires, making goods and products, saving time and lives. Robots today are making a considerable impact from industrial manufacturing to health care, transportation, and exploration of the deep space and sea. Tomorrow, robots will become pervasive and touch upon many aspects of modern life.

The *Springer Tracts in Advanced Robotics (STAR)* was launched in 2002 with the goal of bringing to the research community the latest advances in the robotics field based on their significance and quality. During the latest fifteen years, the STAR series has featured publication of both monographs and edited collections. Among the latter, the proceedings of thematic symposia devoted to excellence in robotics research, such as ISRR, ISER, FSR, and WAFR, have been regularly included in STAR.

The expansion of our field as well as the emergence of new research areas has motivated us to enlarge the pool of proceedings in the STAR series in the past few years. This has ultimately led to launching a sister series in parallel with STAR. The *Springer Proceedings in Advanced Robotics (SPAR)* is dedicated to the timely dissemination of the latest research results presented in selected symposia and workshops.

This volume of the SPAR series brings the proceedings of the fifteenth edition of ARK on Advances in Robot Kinematics, whose proceedings have been previously published by Kluwer and Springer since 1991. This edition took place in Grasse, France, from June 27 to June 30, 2016. The volume edited by Jadran Lenarčič and Jean-Pierre Merlet contains 46 scientific contributions, revised and extended after the meeting. This collection focuses on mechanism and kinematics with special emphasis on parallel robots, control, and singularities.

From its excellent technical program to its warm social interaction, ARK culminates with this unique reference on the current developments and new advances in robot kinematics—a genuine tribute to its contributors and organizers!

Preface

Kinematics, the motion of mechanisms, is one of the most fundamental aspects of robot design, analysis, and control, but it is also relevant to other scientific domains, such as biomechanics, molecular biology, and others. This series of books on *Advances in Robot Kinematics*, which reports the latest achievements in the field, has a long history, as the first symposium was organized in 1988, and the first book was published by Springer in 1991. Since then, a new issue has been published every two years. Each book is linked to a single-track symposium in which the participants exchange their results and opinions in a meeting that brings together the world's best researchers and scientists as well as young students. Since 1992, these symposia have come under the patronage of the International Federation for the Promotion of Machine Science (IFToMM).

In 2016, the symposium related to this book was organized by the French National Research Institute in Computer Science and Control Theory (INRIA) in Grasse, France. We are grateful to the authors for their contributions and to the large team of reviewers for their critical and insightful recommendations. The papers in this book show that robot kinematics is an exciting domain with an enormous number of research challenges that go well beyond the field of robotics. We are also indebted to the members of the HEP-HAISTOS team of INRIA for their help in organizing the symposium. The articles from this symposium were first published in a green open-access archive to favor the free dissemination of the results. We are grateful to Y. Papegay for putting the edition together.

The current book is the 13th in the series of Springer (and Kluwer) and is the result of a peer-review process intended to select the newest and most original achievements in this field. The book was published after the conference. This was unusual for the series from the symposia *Advances in Robot Kinematics*, because the books are typically released before the conference. However, this circumstance allowed the authors to have their manuscripts further improved and to take into account the opinions and constructive criticisms of the conference participants. Some authors even made re-calculations and produced new and more valuable results.

First and foremost, we are grateful to the authors who participated in this project with all their enthusiasm and commitment. We are grateful to Springer, to the whole team, but especially to Nathalie Jacobs and Cynthia Feenestra, who have made this publication possible. Above all, we are grateful to our younger colleague Tadej Petrič, Ph.D., whose assistance was crucial in the technical production of the book. Without him, things would not have taken place as efficiently and rapidly.

We hope that our book will again reach the shelves of scholars, researchers, and students around the world who are attracted to the unique field of robot kinematics.

Contents

Mass Equivalent Pantographs for Synthesis of Balanced Focal Mechanisms	1
Volkert van der Wijk	
Compliant Serial 3R Chain with Spherical Flexures	11
Farid Parvari Rad, Rocco Vertechy, Giovanni Berselli and Vincenzo Parenti-Castelli	
Combining Tube Design and Simple Kinematic Strategy for Follow-the-Leader Deployment of Concentric Tube Robots	23
Cédric Girerd, Kanty Rabenoroosa and Pierre Renaud	
A Screw-Based Dynamic Balancing Approach, Applied to a 5-Bar Mechanism	33
Jan de Jong, Johannes van Dijk and Just Herder	
A Novel S-C-U Dual Four-Bar Linkage	43
Pierre Laroche and Sida Du	
Inverse Kinematics Analysis of a P2CuP2Cu Concentric Tube Robot with Embedded Micro-actuation for 3T-1R Contactless Tasks	51
Mohamed Taha Chikhaoui, Kanty Rabenoroosa and Nicolas Andreff	
Structural Synthesis of Hands for Grasping and Manipulation Tasks	61
Ali Tamimi, Alba Perez-Gracia and Martin Pucheta	
Generalized Construction of Bundle-Folding Linkages	71
Shengnan Lu, Dimiter Zlatanov, Matteo Zoppi and Xilun Ding	
A Complete Analysis of Singularities of a Parallel Medical Robot	81
Josef Schadlbauer, Calin Vaida, Paul Tucan, Doina Pislă, Manfred Husty and Nicolae Plitea	

Workspace Analysis of a 3-PSP Motion Platform	91
Luc Baron	
Posture Optimization of a Functionally Redundant Parallel Robot	101
David Corinaldi, Jorge Angeles and Massimo Callegari	
Analysis Methods for the 3-RRR with Uncertainties in the Design Parameters	109
Joshua K. Pickard, Juan A. Carretero and Jean-Pierre Merlet	
A Study on Simplified Dynamic Modeling Approaches of Delta Parallel Robots	119
Jan Brinker, Philipp Ingenlath and Burkhard Corves	
Hidden Cusps	129
Michel Coste, Philippe Wenger and Damien Chablat	
Some Mobile Overconstrained Parallel Mechanisms	139
J.M. Selig	
On the Line-Symmetry of Self-motions of Linear Pentapods	149
Georg Nawratil	
On Some Notable Singularities of 3-RPR and 3- RRR PPRMs	161
Khaled Assad Arrouk, Belhassen Chedli Bouzgarrou and Grigore Gogu	
Minimized-Torque-Oriented Design of Parallel Modular Mechanism for Humanoid Waist	171
Mouna Souissi, Vincent Hugel, Samir Garbaya and John Nassour	
Kinematic Analysis of the Delthaptic, a New 6-DOF Haptic Device	181
Margot Vulliez, Said Zegloul and Oussama Khatib	
A Family of Non-overconstrained 3-DoF Reconfigurable Parallel Manipulators	191
Matteo-Claudio Palpacelli, Luca Carbonari, Giacomo Palmieri and Massimo Callegari	
Dealing with Redundancy of a Multiple Mobile Coil Magnetic Manipulator: A 3RPR Magnetic Parallel Kinematics Manipulator	201
Baptiste Véron, Arnaud Hubert, Joel Abadie and Nicolas Andreff	
A New Generic Approach for the Inverse Kinematics of Cable-Driven Parallel Robot with 6 Deformable Cables	209
Jean-Pierre Merlet	
Rolling Contact in Kinematics of Multifingered Robotic Hands	217
Lei Cui and Jian S. Dai	

Synergies Evaluation of the SCHUNK S5FH for Grasping Control 225
 Fanny Ficuciello, Alba Federico, Vincenzo Lippiello and Bruno Siciliano

In-Hand Manipulative Synthesis Using Velocity Subspaces 235
 Neda Hassanzadeh, Shramana Ghosh and Nina Robson

Synthesis of Linkages to Trace Plane Curves 245
 Yang Liu and J. Michael McCarthy

Subject-Specific Model of Knee Natural Motion: A Non-invasive Approach 255
 Michele Conconi, Nicola Sancisi and Vincenzo Parenti-Castelli

An Approach for Bone Pose Estimation via Three External Ellipsoid Pressure Points 265
 Nikolas Bufe, Ansgar Heinemann, Peter Köhler and Andrés Kecskeméthy

Robot Dynamics Constraint for Inverse Kinematics. 275
 Enrico Mingo Hoffman, Alessio Rocchi, Nikos G. Tsagarakis and Darwin G. Caldwell

Path Planning in Kinematic Image Space Without the Study Condition 285
 Martin Pfurner, Hans-Peter Schröcker and Manfred Husty

The 2D Orientation Interpolation Problem: A Symmetric Space Approach 293
 Yuanqing Wu, Andreas Müller and Marco Carricato

Closure Polynomials for Strips of Tetrahedra 303
 Federico Thomas and Josep M. Porta

Robust Design of Parameter Identification 313
 Aurélien Massein, David Daney and Yves Papegay

Isotropic Design of the Spherical Wrist of a Cable-Driven Parallel Robot 321
 Angelos Platis, Tahir Rasheed, Philippe Cardou and Stéphane Caro

Dynamic Recovery of Cable-Suspended Parallel Robots After a Cable Failure 331
 Alessandro Berti, Marc Gouttefarde and Marco Carricato

Workspace and Interference Analysis of Cable-Driven Parallel Robots with an Unlimited Rotation Axis 341
 Andreas Pott and Philipp Miermeister

Elasto-Static Model for Point Mass Sagged Cable-Suspended Robots 351
 Erika Ottaviano, Vincenzo Gattulli and Francesco Potenza

Determination of a Dynamic Feasible Workspace for Cable-Driven Parallel Robots	361
Lorenzo Gagliardini, Marc Gouttefarde and Stephane Caro	
Adaptive Human Robot Cooperation Scheme for Bimanual Robots	371
Bojan Nemec, Nejc Likar, Andrej Gams and Aleš Ude	
Influence of the Wind Load in the Trolley-Payload System with a Flexible Hoist Rope	381
Jianjie Zhang and Gabriel Abba	
Towards a Unified Notion of Kinematic Singularities for Robot Arms and Non-holonomic Platforms	393
Andreas Müller and Peter Donelan	
Dynamic Singularities of Non-holonomic Robotic Systems: An Analytic Approach	403
Krzysztof Tchoń	
A Taylor-Based Continuation Method for the Determination and Classification of Robot Singularities	413
Gauthier Hentz, Isabelle Charpentier, Lennart Rubbert and Pierre Renaud	
Identifying Singularity-Free Spheres in the Position Workspace of Semi-regular Stewart Platform Manipulators	421
Anirban Nag, Vikranth Reddy, Saurav Agarwal and Sandipan Bandyopadhyay	
Geometric Algebra Based Kinematics Model and Singularity of a Hybrid Surgical Robot	431
Tanio K. Tanev	
Kinematic Singularities of a 3-DoF Planar Geared Robot Manipulator	441
