Dar-Hao Chen, Texas, USA

Khalid M. El-Zahaby, Giza, Egypt

About this Series

Sustainable Infrastructure impacts our well-being and day-to-day lives. The infrastructures we are building today will shape our lives tomorrow. The complex and diverse nature of the impacts due to weather extremes on transportation and civil infrastructures can be seen in our roadways, bridges, and buildings. Extreme summer temperatures, droughts, flash floods, and rising numbers of freeze-thaw cycles pose challenges for civil infrastructure and can endanger public safety. We constantly hear how civil infrastructures need constant attention, preservation, and upgrading. Such improvements and developments would obviously benefit from our desired book series that provide sustainable engineering materials and designs. The economic impact is huge and much research has been conducted worldwide. The future holds many opportunities, not only for researchers in a given country, but also for the worldwide field engineers who apply and implement these technologies. We believe that no approach can succeed if it does not unite the efforts of various engineering disciplines from all over the world under one umbrella to offer a beacon of modern solutions to the global infrastructure. Experts from the various engineering disciplines around the globe will participate in this series, including: Geotechnical, Geological, Geoscience, Petroleum, Structural, Transportation, Bridge, Infrastructure, Energy, Architectural, Chemical and Materials, and other related Engineering disciplines.

Preface

Toward building sustainable and longer civil infrastructures, the engineering community around the globe continues undertaking research and development to improve existing design, modeling, and analytical capability. Such initiatives are also the core mission of the Soil-Structure Interaction Group in Egypt (SSIGE) to contribute to the ongoing research toward sustainable infrastructure. This conference series “GeoMEast International Congress and Exhibition” is one of these initiatives.

Ancient peoples built their structures to withstand the test of time. If we think in the same way, our current projects will be a heritage for future generations. In this context, an urgent need has quickly motivated the SSIGE and its friends around the globe to start a new congress series that can bring together researchers and practitioners to pursue “Sustainable Civil Infrastructures.” The GeoMEast 2017 is a unique forum in the Middle East and Africa that transfers from the innovation in research into the practical wisdom to serve directly the practitioners of the industry.

More than eight hundred abstracts were received for the first edition of this conference series “GeoMEast 2017” in response to the Call for Papers. The abstracts were reviewed by the Organizing and Scientific Committees. All papers were reviewed following the same procedure and at the same technical standards of practice of the TRB, ASCE, ICE, ISSMGE, IGS, IAEG, DFI, ISAP, ISCP, ITA, ISHMII, PDCA, IUGS, ICC, and other professional organizations who have supported the technical program of the GeoMEast 2017. All papers received a minimum of two full reviews coordinated by various tracks chairs and supervised by the volumes editors through the Editorial Manager of the SUCI “Sustainable Civil Infrastructure” book series. As a result, 15 volumes have been formed of the final +320 accepted papers. The authors of the accepted papers have addressed all the comments of the reviewers to the satisfaction of the tracks chairs, the volumes editors, and the proceedings editor. It is hoped that readers of this proceedings of the GeoMEast 2017 will be stimulated and inspired by the wide range of papers written by a distinguished group of national and international authors.

Publication of this quality of technical papers would not have been possible without the dedication and professionalism of the anonymous papers reviewers. The names of these reviewers appear in the acknowledgment that follows. For any additional reviewers whose names were inadvertently missed, we offer our sincere apologies.

We are thankful to Dr. Hany Farouk Shehata, Dr. Nabil Khelifi, Dr. Khalid M. ElZahaby, Dr. Mohamed F. Shehata, and to all the distinguished volumes editors of the proceedings of the GeoMEast 2017. Appreciation is extended to the authors and track chairs for their significant contributions. Thanks are also extended to Springer for their coordination and enthusiastic support to this conference. The editors acknowledge the assistance of Ms. Janet Sterritt-Brunner, Mr. Arulmurugan Venkatasalam in the final production of the 15 edited volumes “Proceedings of GeoMEast 2017”.

Contents

The Influence of Filler Content on the Compactness of the Bituminous Mixture	1
Sami Yaich and Kaouther Machta	
Thin Sections Images Processing Technique for the Porosity Estimation in Carbonate Rocks	8
N.D. Nurgalieva and N.G. Nurgalieva	
Landslide Study of Lands in Quarrys. Case Chouf Amar - M'sila, Algeria	14
Abderrazak Saadoun, Abdallah Hafsaoui, and Mohamed Fredj	
Permeability Characterization of Clay Under Different Hydraulic Gradient	29
Olusegun Alabi	
Wetting and Drying Compacted Soil-Lime Mixtures	49
N. Maafi, M. Akchiche, and R. Sara	
Quantitative Research on the Evolution of Mesoparameters at Out of the Shear Band of the Air-Dried Clay	63
Wei Wang, Pei-ling He, and Bing-hua Zhao	
Effect of Quarry Dust on Compaction Characteristics of Clay	78
Malaya Chetia, Manash P. Baruah, and Asuri Sridharan	
Effect of Temperature on Strength and Microstructure of Lime Stabilized Flyash	101
Aparupa Pani and S.P. Singh	
Flow of Microbial Suspension Through Porous Media	115
B.S. Shashank, Shetty Rakshith, Jeevan Joseph, Arif Mohammad, and D.N. Singh	

Investigations on the Effects of Microorganisms on Coarse Grained Soil	123
S. Sowmya, R. Asha Latha, P.S. Meenu, and D.N. Singh	
Stabilization of Dispersive Soil Using Biopolymer	132
Kajal Swain, Mahasakti Mahamaya, Shamshad Alam, and Sarat Kumar Das	
Study on the Effects of the Rheological Properties for Flow Behaviour of Assam Crude Oil with Various Chemicals	148
Shilpi Sarmah, Subrata Borgohain Gogoi, Joysree Barman, and Debashree Dutta	
Spatial Imaging of the Water Resource and Natural Environment Coastal Gharb Basin: Downstream Part of the Hydraulic Basin of the Sebou River (Morocco)	169
Nezha El Mahmoudi, Mohamed El Wartiti, Rajae Azelmad, Ridouane Sadki, and Sanae Berred	
Evaluating and Characterizing Oil field Produced Water of Upper Assam Basin	176
Subrata Borgohain Gogoi, Amarjit Rajbongshi, and Shilpi Sarmah	
Remediation of Petroleum Hydrocarbons in a Tropical Sand Tank Model	185
Olaolu G. Fadugba, Samuel A. Ola, and Oluwapelumi O. Ojuri	
Evaluation of Land Subsidence Based on Distributed Monitoring and SEM Analysis	196
Hongtao Jiang, Kai Gu, Jianhua Yin, Bin Shi, and Jiayu Ma	
An Assessment of Crude Oil Leakage Beneath a Tank in a Refinery in the Niger Delta Sub-region Nigeria, Through Geotechnical Techniques	207
So-ngo Clifford Teme, Oruene Olem-Ogoin, and Prosper Ogbunie	
The Influence of Geochemistry of Gas Hydrates on the Shear Strength and Stability of Marine Sediment Movement	226
J. Rajaraman, K. Thiruvankatasamy, and S. Narasimha Rao	
In-Situ Chemical Oxidation of Hydrocarbon Contaminated Groundwater (A Case Study of Baruwa Community, Lagos, Nigeria)	235
S.A. Ola, O.G. Fadugba, and M.A. Uduebor	
Analysis of Infiltration, Colapsividade and Absorption of Surface Layer in Area of Deployment in the Setor Habitacional Jardins Mangueiral in Federal District - Brazil	248
Rideci Farias, Haroldo Paranhos, João Marcelo Lopes Siqueira, Elson Oliveira de Almeida, and Roberto Pimentel	

Environmental Aging Effect and Geotechnical Stabilization of Organic Waste on Soil 259
 Nirali Bhaskar Hasilkar, M. Shweta, Mehul Parmar, Pradeep Rathod, and Ravi Patel

Laboratory Study on the Permeability of Fresh Municipal Solid Waste 269
 Zhang Zhenying, Zhang Lingfeng, Wu Dazhi, Ding Zhengkun, Wang Yingfeng, and Yuan Qiuyan

Compaction Properties of Municipal Solid Waste 279
 F.N. Okonta, N. Ngcobo, M. Mtsweni, and D. Harris

Strength Characteristics of Dispersive Soil by Using Industrial By-Products 293
 Samaptika Mohanty, N. Roy, and S.P. Singh

The Sustainable Use of Fine Marble Waste Powder for the Stabilization of Desert Sand in Oman 303
 Mohsin U. Qureshi, Bushra Al-Sawafi, Maryam Al-Washahi, Moza Al-Saidi, and Salima Al-Badi

Assessing the Suitability of Compacted Bentonite-Pond Ash Mixes as Landfill Liner 314
 Suryaleen Rout and S.P. Singh

Feasibility Study on Usage of Metalized Plastic Waste in Concrete 328
 Ankur Bhogayata and N.K. Arora

Stabilization of Red Mud Using Ground Granulated Blast Furnace Slag by Geopolymerization Technique 338
 S.P. Singh, S. Samantasinghar, and D. Sindhuja

Effect of Physico-Chemical Treatment on the Mechanical Properties of Dredged Sediment 351
 Maghnia Asmahane Bourabah and Said Taibi

Characterization of Dredged Sand from Chilka Lake as a Geo Material With and Without Biopolymer 364
 Harishankar Jeevan Dash and Sarat Kumar Das

Correlations Between Sediments Characteristics from Tunisian Harbors 378
 Amel Missaoui, Imen Said, Marwa Zelleg, Essaieb Hamdi, and Zoubeir Lafhaj

Some Studies on Mechanical Behaviour of Cement Stabilized Dredged Soil from Flood Spill Channel of Jhelum River Srinagar 386
 B.A. Mir

Dredged Marine Sediment as Raw Material in Civil Engineering Applications 407
Marwa Zelleg, Imen Said, Amel Missaoui, Zoubeir Lafhaj,
and Essaieb Hamdi
