

SpringerBriefs in Mathematics of Planet Earth • Weather, Climate, Oceans

Managing Series Editors

D. Crisan, London, UK

D. Holm, London, UK

Series Editors

C. Cotter, London, UK

J. Broecker, Reading, UK

T. Shepherd, Reading, UK

S. Reich, Potsdam, Germany

V. Lucarini, Hamburg, Germany

SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.

Typical topics might include:

- A timely report of state-of-the art techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study

SpringerBriefs in the Mathematics of Planet Earth showcase topics of current relevance to the Mathematics of Planet Earth. Published titles will feature both academic-inspired work and more practitioner-oriented material, with a focus on the application of recent mathematical advances from the fields of Stochastic And Deterministic Evolution Equations, Dynamical Systems, Data Assimilation, Numerical Analysis, Probability and Statistics, Computational Methods to areas such as climate prediction, numerical weather forecasting at global and regional scales, multi-scale modelling of coupled ocean-atmosphere dynamics, adaptation, mitigation and resilience to climate change, etc. This series is intended for mathematicians and other scientists with interest in the Mathematics of Planet Earth.

Contents

1 A Description of the Carbon Markets and Their Role in Climate Change Mitigation	1
1.1 Why Do We Need Emissions Trading Markets?	1
1.1.1 The Science of Climate Change	1
1.2 Policy Developments and the Paris Agreement.	2
1.3 Economic Principles Underlying Emissions Trading as a Policy Tool	3
1.3.1 Tax Versus Market	3
1.3.2 Trading Choices	5
1.4 The European Union Emissions Trading System	6
1.4.1 Phases and Caps	6
1.4.2 EUA Price Evolutions	7
1.5 Carbon Pricing and the Future	8
References.	9
2 Introduction to Forward-Backward Stochastic Differential Equations	11
2.1 Backward Stochastic Differential Equations	12
2.1.1 Well-Posedness of BSDEs	13
2.1.1.1 Linear BSDEs.	14
2.1.1.2 The Comparison Theorem	15
2.1.2 Application to Non-linear Pricing	16
2.1.2.1 Super-Replication in a Perfect Market	17
2.1.2.2 A Non-linear Market.	18
2.1.3 Applications to Stochastic Control	19
2.1.4 Extensions.	21
2.1.4.1 Constrained BSDEs	21
2.1.4.2 The Non-lipschitz Setting	22
2.1.4.3 McKean–Vlasov FBSDEs.	23
2.2 Markovian BSDEs	24

2.2.1	First Definition and Markov Property	24
2.2.2	The Link with PDEs	25
2.3	Coupled Forward-Backward SDEs	28
2.3.1	The Pontryagin Approach to Stochastic Control Problems	29
2.3.2	Well-Posedness of FBSDEs in Small Time Duration	31
2.3.2.1	Existence and Uniqueness	32
2.3.2.2	The Decoupling Field and a Quasilinear PDE	34
2.3.3	Existence and Uniqueness for Arbitrary Terminal Time	37
2.3.3.1	Non-degenerate Diffusion Coefficient	38
2.3.3.2	FBSDEs with Singular Coefficients	38
	References	40
3	A Mathematical Model for Carbon Emissions Markets	43
3.1	Introduction	43
3.2	Market Set-Up	43
3.3	The Bid Stack, Emissions Stack and Emissions Rate	45
3.4	Risk-Neutral Dynamics of Random Factors	51
3.5	The Single-Period Allowance Pricing FBSDE	52
3.6	Extension to a Multi-period Emissions Trading System	53
	References	56
4	Numerical Approximation of FBSDEs	59
4.1	Decoupled FBSDEs	59
4.2	A Markovian Iteration Scheme for Fully Coupled FBSDEs	64
4.3	Computation of Conditional Expectations Using Regression	66
4.4	Numerical Examples of the Scheme's Convergence	69
4.4.1	Bender and Zhang Test Model	69
4.4.2	Numerical Investigation of a Simple Singular FBSDE	71
	References	73
5	A Case Study of the UK Energy Market	75
5.1	Introduction: An Explicit Model	75
5.2	Specifying the Dynamics of the Market Factors	76
5.2.1	Estimating the Seasonal Component	77
5.2.2	Fitting the Diffusion Processes	84
5.3	Estimating the Bid Stack and Emissions Rate	89
5.4	Simulation Methodology	92
5.5	Results	95
	References	100
	Index	103
