For Anna

Acknowledgments

A book on climate change policy by city government must attempt to capture the essence of context and its role in shaping responses, and this is particularly so in a book with an international focus. I received help from people along the way, and I owe a great debt of gratitude to specific individuals who influenced my thinking with their perspectives and experience.

A first acknowledgement must go to my home institution, the University of Queensland's Business School. Over the years it has supported my research efforts and, more specifically, enabled me to spend time working on completing the book.

A second acknowledgment must go to my friend and colleague Professor Geert Bouckaert, from the Institute for Public Governance at KU Leuven. Our many discussions on the nature and pervasiveness of performance management shaped my ideas on the topic and much of the approach taken in the book.

Third, I must acknowledge Professor Brian Head, from the School of Political Science and International Studies at the University of Queensland, for his friendship and guidance at those critical times when I needed a wise and deeply analytical mind to show me the way through.

A fourth acknowledgment must go to Rachael Ballard, Head of Science and Society at Palgrave Macmillan/Springer Nature, for her support. She

immediately recognised the potential of the book and smoothed the path for me throughout the process. I must also acknowledge Jack Redden, Rachael's Editorial Assistant, for easing me through the final stages toward publication.

I have a great deal of respect for the senior managers from the city governments in Copenhagen, Stockholm and Tokyo who face the political and administrative challenges of responding to climate change. They were generous with their time and their information in outlining their experiences for me. I thank them heartily for their honesty and commitment.

My deepest gratitude is for my partner and best friend Anna. She inspires me and supports me in ways that continue to astound and amaze; this is why the book is dedicated to her.

Contents

1	Introduction	1
2	City Governments and Climate Change	27
3	City Governments, Climate Change, and the Performance Agenda	57
4	Performance Management: An Analytical Framework	105
5	City of Stockholm	141
6	Copenhagen City Government	179
7	Tokyo Municipal Government	219
8	Synthesis and Conclusions	261
	Index	287

List of Figures
