Preface

The book series Neuroscience and Respiration presents contributions by expert researchers and clinicians in the multidisciplinary areas of medical research and clinical practice. Particular attention is focused on pulmonary disorders as the respiratory tract is upfront at the first line of defense for organisms against pathogens and environmental or other sources of toxic or disease-causing effects. The articles provide timely overviews of contentious issues or recent advances in the diagnosis, classification, and treatment of the entire range of diseases and disorders, both acute and chronic. The texts are thought as a merger of basic and clinical research dealing with biomedicine at both the molecular and functional levels and with the interactive relationship between respiration and other neurobiological systems, such as cardiovascular function, immunogenicity, endocrinology and humoral regulation, and the mind-to-body connection. The authors focus on modern diagnostic techniques and leading-edge therapeutic concepts. Practical, data-driven options to manage patients are considered.

Body functions, including lung ventilation and its regulation, are ultimately driven by the brain. However, neuropsychological aspects of disorders are still mostly a matter of conjecture. After decades of misunderstanding and neglect, emotions have been rediscovered as a powerful modifier or even the probable cause of various somatic disorders. Today, the link between stress and health is undeniable. Scientists accept a powerful psychological connection that can directly affect our quality of life and health span. Psychological approaches, which can decrease stress, can play a major role in disease therapy.

Clinical advances stemming from molecular and biochemical research are but possible if research findings are translated into diagnostic tools, therapeutic procedures, and education, effectively reaching physicians and patients. All this cannot be achieved without a multidisciplinary, collaborative, bench-to-bedside approach involving both researchers and clinicians. The role of science in shaping medical knowledge and transforming it into practical care is undeniable.

Concerning respiratory disorders, their societal and economic burden has been on the rise worldwide, leading to disabilities and shortening of life-span. COPD alone causes more than three million deaths globally each year. Concerted efforts are required to improve this situation, and part of those

efforts are gaining insights into the underlying mechanisms of disease and staying abreast with the latest developments in diagnosis and treatment regimens. It is hoped that the articles published in this series will assume a leading position as a source of information on interdisciplinary medical research advancements, addressing the needs of medical professionals and allied health care workers, and become a source of reference and inspiration for future research ideas.

I would like to express my deep gratitude to Paul Roos, Tanja Koppejan, and Cynthia Kroonen of Springer Nature NL for their genuine interest in making this scientific endeavor come through and in the expert management of the production of this novel book series.

Contents

Airway and Blood Inflammatory Markers in Waste Collectors	1
M. Raulf, V. van Kampen, H.D. Neumann, V. Liebers, A. Deckert, T. Brüning, J. Bünger, and F. Hoffmeyer	
Malnutrition and Quality of Life in Patients with Non-Small-Cell Lung Cancer	15
Jacek Polański, Beata Jankowska-Polańska, Izabella Uchmanowicz, Mariusz Chabowski, Dariusz Janczak, Grzegorz Mazur, and Joanna Rosińczuk	
Influence of Vitamin D and Cotinine on T-Regulatory Cells and Asthma Severity in Children	27
Bolesław Kalicki, Agata Wawrzyniak, Agnieszka Lipińska-Opalka, Sławomir Lewicki, and Robert Zdanowski	
Identification of <i>Mycobacterium</i> Species by MALDI-TOF Mass Spectrometry	37
M. Neuschlova, M. Vldarova, J. Kompanikova, V. Sadlonova, and E. Novakova	
Indoor Exposure to Volatile Organic Compounds in Children: Health Risk Assessment in the Context of Physiological Development	43
Radosław Czernych, Artur J. Badyda, Grazyna Gałęzowska, Lidia Wolska, and Paweł Zagożdżon	
Metabolic Syndrome as a Factor Affecting Systemic Inflammation in Patients with Chronic Obstructive Pulmonary Disease	55
R. Rubinsztajn, T. Przybyłowski, M. Maskey-Warzęchowska, M. Paplińska-Goryca, P. Nejman-Gryz, K. Karwat, and R. Chazan	
Carotid Intima-Media Thickness and Metabolic Syndrome Components in Obese Children and Adolescents	63
Małgorzata Rumińska, Ewelina Witkowska-Sędek, Anna Majcher, Michał Brzewski, Aneta Czerwonogrodzka-Senczyna, Urszula Demkow, and Beata Pyrzak	

Pro-inflammatory Cytokines in Psychiatric Disorders in Children and Adolescents: A Review	73
Paulina Miłkowska, Katarzyna Popko, Urszula Demkow, and Tomasz Wolańczyk	
Renalase in Children with Glomerular Kidney Diseases	81
Piotr Skrzypczyk, Joanna Przychodzień, Małgorzata Mizerska-Wasiak, Elżbieta Kuźma-Mroczkowska, Magdalena Okarska-Napierała, Elżbieta Górską, Anna Stelmaszyk-Emmel, Urszula Demkow, and Małgorzata Pańczyk-Tomaszewska	
A Case of Acute Myeloid Leukemia with Novel Translocation t(6;11)(p22.2;q23) and Concurrent Insertion ins(11;9)(q23;p21.3p21.3)	93
I. Malinowska, B. Sikorska-Fic, M. Romiszewska, A. Stefaniak, A. Pastwińska, E. Górską, K. Popko, C. Meyer, R. Marschalek, and T. Szczepański	
Index	99
