# Preface

We are very proud to present the conference proceedings for the 20th Medical Image Computing and Computer Assisted Intervention (MICCAI) conference, which was successfully held at the Quebec City Conference Center, September 11–13, 2017 in Quebec City, Canada. Ce fut un plaisir et une fierté de vous recevoir tous et chacun à Québec, berceau de la culture francophone en Amérique du Nord<sup>1</sup>.

The MICCAI 2017 conference, alongside 45 satellite events held on September 10th and 14th, attracted hundreds of world-leading scientists, engineers, and clinicians, involved in medical image processing, medical image formation, and computer assisted medical procedures.

You will find assembled in this three-volume Lecture Notes in Computer Science (LNCS) publication the proceedings for the main conference, selected after a thoughtful, insightful, and diligent double-blind review process, which was organized in several phases, described below.

The preliminary phase of the review process happened before the curtain was raised, so to speak, as the Program Chairs made the decision to move MICCAI towards novel conference management tools of increasingly common use in the computer vision and machine learning community. These included the Conference Managing Toolkit for paper submissions and reviews (<https://cmt.research.microsoft.com>); the Toronto Paper Matching System (<http://torontopapermatching.org/>) for automatic paper assignment to area chairs and reviewers; and Researcher.CC (<http://researcher.cc>) to handle conflicts between authors, area chairs, and reviewers.

---

<sup>1</sup> It was our pleasure and pride to welcome you each and all to Quebec, the cradle of French-speaking culture in North America.

**Fig. 1.** Incoming manuscript distribution

Phase 1 of the review process of each paper was handled by an area chair and three reviewers. There was a total of 52 area chairs selected with expertise as shown in Fig. 2. Noticeably, 50% were from the Americas, 35% from Europe, and 15% from Asia, with 44% women.

**Fig. 2.** PC distribution

**Fig. 3.** Reviewer distribution

The first phase consisted in the management of abstracts per se. In total, 800 submissions were received, from over 1,150 intentions to submit. As seen in Fig. 1, of those submissions, 80% were considered as pure Medical Image Computing (MIC), 14% as pure Computer Assisted Intervention (CAI), and 6% as MIC-CAI papers that fitted into both MIC and CAI areas. Of note, 21% papers were submitted by a female first author.

Each area chair had 14 to 20 papers to handle. Each reviewer committed to review from 3 to 6 papers. We had a total of 627 reviewers with expertise as detailed in Fig. 3, and of which 20% were women.

To assign reviewers for each submitted manuscript, we first used the Toronto Paper Matching System to assign each paper with a ranked list of reviewers. Second, area chairs, blinded to authorship, re-ordered and ranked reviewers assigned for each paper. Finally, the Conference Management Toolkit made the final assignment of papers automatically using the Toronto Paper Matching System scores and rankings from area chairs, while balancing the workload among all reviewers.

**Fig. 4.** Phase 1 results

ranking of the same papers. Papers in agreement by both rankings from area chairs (ranked in top 50% or ranked in bottom 50%) were either accepted or rejected accordingly, and the remaining papers categorized as borderline of Phase 2. This process yielded 103 borderline papers, 217 accepted papers, and 471 rejected papers, as shown in Fig. 5.

Finally, the reviews, the area chair rankings, and associated rebuttals were subsequently discussed in person among the Program Committee (PC) members during the MICCAI 2017 PC meeting that took place in Quebec City, Canada, May 10–12, 2017, with 38 out of 52 PC members in attendance. The process led to the acceptance of another 38 papers and the rejection of 65 papers. In total, 255 papers of the 800 submitted papers were accepted, for an overall acceptance rate of 32% (Fig. 6), with 45 accepted papers (18%) by a female first author (164 papers were submitted by a female first author).

For these proceedings, the 255 papers have been organized in 15 groups as follows:

- Volume LNCS 10433 includes Atlas and Surface-Based Techniques (14 manuscripts), Shape and Patch-Based Techniques (11), Registration Techniques (15), Functional Imaging, Connectivity and Brain Parcellation (17), Diffusion Magnetic Resonance Imaging (MRI) & Tensor/Fiber Processing (20), Image Segmentation and Modelling (12).
- Volume LNCS 10434 includes: Optical Imaging (18 manuscripts), Airway and Vessel Analysis (10), Motion and Cardiac Analysis (16), Tumor Processing (9), Planning and Simulation for Medical Interventions (11), Interventional Imaging and Navigation (14), and Medical Image Computing (8).
- Volume LNCS 10435 includes: Feature Extraction and Classification Techniques (23 manuscripts) and Machine Learning in Medical Imaging Computing (56).

Based on the Phase 1 double-blind reviews and rebuttals sent specifically to area chairs, 152 papers were directly accepted and 405 papers were directly rejected, giving the distribution shown in Fig. 4.

Next, the remaining 243 borderline papers went into Phase 2 of the review process. The area chair first ranked the Phase 1 remaining papers and a second area chair performed a

**Fig. 5.** Phase 2 results

**Fig. 6.** Final results

In closing, we would like to thank specific individuals who contributed greatly to the success of MICCAI 2017 and the quality of its proceedings. These include the Satellite Events Committee led by Tal Arbel. Her co-chairs were Jorge Cardoso, Parvin Mousavi, Kevin Whittingstall, and Leo Grady; other members of the Organizing Committee including Mallar Chakravarty (social), Mert Sabuncu (MICCAI 2016), Julia Schnabel (MICCAI 2018), and Caroline Worreth and her team of volunteers and professionals; the MICCAI society, for support and insightful comments; and our partners for financial support and their presence on site. We are especially grateful to all members of the PC for their diligent work in helping to prepare the technical program, as well as the reviewers for their support during the entire process. Last but not least, we thank authors, co-authors, students, and supervisors, who toiled away to produce work of exceptional quality that maintains MICCAI as a beacon of *savoir-faire* and expertise not to be missed.

We look forward to seeing you in Granada, Spain – Au plaisir de vous revoir en 2018!

<b>Motion and Cardiac Analysis</b>	
Semi-supervised Learning for Network-Based Cardiac MR Image Segmentation . . . . .	253
<i>Wenjia Bai, Ozan Oktay, Matthew Sinclair, Hideaki Suzuki,                  Martin Rajchl, Giacomo Tarroni, Ben Glocker, Andrew King,                  Paul M. Matthews, and Daniel Rueckert</i>	
A Localized Statistical Motion Model as a Reproducing Kernel for Non-rigid Image Registration. . . . .	261
<i>Christoph Jud, Alina Giger, Robin Sandkühler, and Philippe C. Cattin</i>	

Efficient Deformable Motion Correction for 3-D Abdominal MRI  
Using Manifold Regression . . . . . 270  
*Xin Chen, Daniel R. Balfour, Paul K. Marsden, Andrew J. Reader,  
Claudia Prieto, and Andrew P. King*

Flow Network Based Cardiac Motion Tracking Leveraging Learned  
Feature Matching . . . . . 279  
*Nripesh Parajuli, Allen Lu, John C. Stendahl, Maria Zontak,  
Nabil Boutagy, Imran Alkhalil, Melissa Eberle, Ben A. Lin,  
Matthew O’Donnell, Albert J. Sinusas, and James S. Duncan*

Automatic 3D Cardiovascular MR Segmentation with Densely-Connected  
Volumetric ConvNets . . . . . 287  
*Lequan Yu, Jie-Zhi Cheng, Qi Dou, Xin Yang, Hao Chen, Jing Qin,  
and Pheng-Ann Heng*

Predicting Slice-to-Volume Transformation in Presence  
of Arbitrary Subject Motion . . . . . 296  
*Benjamin Hou, Amir Alansary, Steven McDonagh, Alice Davidson,  
Mary Rutherford, Jo V. Hajnal, Daniel Rueckert, Ben Glocker,  
and Bernhard Kainz*

Detection and Characterization of the Fetal Heartbeat in Free-hand  
Ultrasound Sweeps with Weakly-supervised Two-streams  
Convolutional Networks. . . . . 305  
*Yuan Gao and J. Alison Noble*

Retrospective Head Motion Estimation in Structural Brain MRI  
with 3D CNNs . . . . . 314  
*Juan Eugenio Iglesias, Garikoitz Lerma-Usabiaga,  
Luis C. Garcia-Peraza-Herrera, Sara Martinez,  
and Pedro M. Paz-Alonso*

Learning-Based Spatiotemporal Regularization and Integration of Tracking  
Methods for Regional 4D Cardiac Deformation Analysis . . . . . 323  
*Allen Lu, Maria Zontak, Nripesh Parajuli, John C. Stendahl,  
Nabil Boutagy, Melissa Eberle, Imran Alkhalil, Matthew O’Donnell,  
Albert J. Sinusas, and James S. Duncan*

Fully Automated Segmentation-Based Respiratory Motion Correction of  
Multiplanar Cardiac Magnetic Resonance Images for Large-Scale Datasets. . . 332  
*Matthew Sinclair, Wenjia Bai, Esther Puyol-Antón, Ozan Oktay,  
Daniel Rueckert, and Andrew P. King*

Temporal HeartNet: Towards Human-Level Automatic Analysis  
of Fetal Cardiac Screening Video . . . . . 341  
*Weilin Huang, Christopher P. Bridge, J. Alison Noble,  
and Andrew Zisserman*

Longitudinal Analysis Using Personalised 3D Cardiac Models  
with Population-Based Priors: Application to Paediatric Cardiomyopathies . . . 350  
*Roch Mollero, Hervé Delingette, Manasi Datar, Tobias Heimann,  
Jakob A. Hauser, Dilveer Panesar, Alexander Jones, Andrew Taylor,  
Marcus Kelm, Titus Kuehne, Marcello Chinali, Gabriele Rinelli,  
Nicholas Ayache, Xavier Pennec, and Maxime Sermesant*

Temporal Interpolation of Abdominal MRIs Acquired  
During Free-Breathing . . . . . 359  
*Neerav Karani, Christine Tanner, Sebastian Kozerke,  
and Ender Konukoglu*

Intraoperative Organ Motion Models with an Ensemble  
of Conditional Generative Adversarial Networks . . . . . 368  
*Yipeng Hu, Eli Gibson, Tom Vercauteren, Hashim U. Ahmed,  
Mark Emberton, Caroline M. Moore, J. Alison Noble,  
and Dean C. Barratt*

*CardiacNET*: Segmentation of Left Atrium and Proximal Pulmonary  
Veins from MRI Using Multi-view CNN . . . . . 377  
*Aliasghar Mortazi, Rashed Karim, Kawal Rhode, Jeremy Burt,  
and Ulas Bagci*

Analysis of Periodicity in Video Sequences Through Dynamic  
Linear Modeling . . . . . 386  
*A. Jonathan McLeod, Dante P.I. Capaldi, John S.H. Baxter,  
Grace Parraga, Xiongbiao Luo, and Terry M. Peters*

**Tumor Processing**

Groupwise Registration of MR Brain Images Containing Tumors  
via Spatially Constrained Low-Rank Based Image Recovery. . . . . 397  
*Zhenyu Tang, Yue Cui, and Bo Jiang*

Deep Correlational Learning for Survival Prediction  
from Multi-modality Data . . . . . 406  
*Jiawen Yao, Xinliang Zhu, Feiyun Zhu, and Junzhou Huang*

Compressed Sensing on Multi-pinhole Collimator SPECT Camera  
for Sentinel Lymph Node Biopsy . . . . . 415  
*Carlo Seppi, Uri Nahum, Peter A. von Niederhäusern, Simon Pezold,  
Michael Rissi, Stephan K. Haerle, and Philippe C. Cattin*

Personalized Pancreatic Tumor Growth Prediction via Group Learning . . . . . 424  
*Ling Zhang, Le Lu, Ronald M. Summers, Electron Kebebew,  
and Jianhua Yao*

Boundary-Aware Fully Convolutional Network for Brain Tumor Segmentation . . . . .	433
<i>Haocheng Shen, Ruixuan Wang, Jianguo Zhang, and Stephen J. McKenna</i>	
Field Effect Induced Organ Distension (FORge) Features Predicting Biochemical Recurrence from Pre-treatment Prostate MRI . . . . .	442
