

# Springer Series in Light Scattering

## Series editor

Alexander Kokhanovsky, Vitrociset Belgium, Darmstadt, Germany

## Editorial Advisory Board

Thomas Henning, Max Planck Institute for Astronomy, Heidelberg, Germany

George Kattawar, Texas A&M University, College Station, USA

Oleg Kopelevich, Shirshov Institute of Oceanology, Moscow, Russia

Kuo-Nan Liou, University of California, Los Angeles, USA

Michael Mishchenko, NASA Goddard Institute for Space Studies, New York, USA

Lev Perelman, Harvard University, Cambridge, USA

Knut Stamnes, Stevens Institute of Technology, Hoboken, USA

Graeme Stephens, Jet Propulsion Laboratory, Los Angeles, USA

Bart van Tiggelen, J. Fourier University, Grenoble, France

Claudio Tomasi, Institute of Atmospheric Sciences and Climate, Bologna, Italy

The main purpose of new *SPRINGER Series in Light Scattering* is to present recent advances and progress in light scattering media optics. The topic is very broad and incorporates such diverse areas as atmospheric optics, ocean optics, optics of close-packed media, radiative transfer, light scattering, absorption, and scattering by single scatterers and also by systems of particles, biomedical optics, optical properties of cosmic dust, remote sensing of atmosphere and ocean, etc. The topic is of importance for material science, environmental science, climate change, and also for optical engineering. Although main developments in the solutions of radiative transfer and light scattering problems have been achieved in the 20th century by efforts of many scientists including V. Ambartsumian, S. Chandrasekhar, P. Debye, H. C. van de Hulst, G. Mie, and V. Sobolev, the light scattering media optics still have many puzzles to be solved such as radiative transfer in closely packed media, 3D radiative transfer as applied to the solution of inverse problems, optics of terrestrial and planetary surfaces, etc. Also it has a broad range of applications in many branches of modern science and technology such as biomedical optics, atmospheric and oceanic optics, and astrophysics, to name a few. It is planned that the Series will raise novel scientific questions, integrate data analysis, and offer new insights in optics of light scattering media.

# Contents

<b>1 Polarized Radiative Transfer in Optically Active Light Scattering Media</b> .....	1
Margarita G. Kuzmina, Leonid P. Bass and Olga V. Nikolaeva	
<b>2 Advances in Spectro-Polarimetric Light-Scattering by Particulate Media</b> .....	55
Romain Ceolato and Nicolas Riviere	
<b>3 Light Scattering by Large Bubbles</b> .....	109
Fabrice R. A. Onofri and Matthias P. L. Sentis	
<b>4 Volume Scattering Function of Seawater</b> .....	151
Michael E. Lee and Elena N. Korchemkina	
<b>5 Remote Sensing of Crystal Shapes in Ice Clouds</b> .....	197
Bastiaan van Diedenhoven	
<b>6 Light Scattering in Combustion: New Developments</b> .....	251
Alan R. Jones	
<b>Index</b> .....	295
