

# **Springer Proceedings in Complexity**

## **Springer Complexity**

Springer Complexity is an interdisciplinary program publishing the best research and academic-level teaching on both fundamental and applied aspects of complex systems—cutting across all traditional disciplines of the natural and life sciences, engineering, economics, medicine, neuroscience, social, and computer science.

Complex Systems are systems that comprise many interacting parts with the ability to generate a new quality of macroscopic collective behavior the manifestations of which are the spontaneous formation of distinctive temporal, spatial, or functional structures. Models of such systems can be successfully mapped onto quite diverse “real-life” situations like the climate, the coherent emission of light from lasers, chemical reaction-diffusion systems, biological cellular networks, the dynamics of stock markets and of the Internet, earthquake statistics and prediction, freeway traffic, the human brain, or the formation of opinions in social systems, to name just some of the popular applications.

Although their scope and methodologies overlap somewhat, one can distinguish the following main concepts and tools: self-organization, nonlinear dynamics, synergetics, turbulence, dynamical systems, catastrophes, instabilities, stochastic processes, chaos, graphs and networks, cellular automata, adaptive systems, genetic algorithms, and computational intelligence.

The three major book publication platforms of the Springer Complexity program are the monograph series “Understanding Complex Systems” focusing on the various applications of complexity, the “Springer Series in Synergetics”, which is devoted to the quantitative theoretical and methodological foundations, and the “SpringerBriefs in Complexity” which are concise and topical working reports, case-studies, surveys, essays, and lecture notes of relevance to the field. In addition to the books in these two core series, the program also incorporates individual titles ranging from textbooks to major reference works.

# Contents

<b>On Complex Economic Dynamics: Agent-Based Computational Modeling and Beyond</b> .....	1
Shu-Heng Chen, Ye-Rong Du, Ying-Fang Kao, Ragupathy Venkatachalam, and Tina Yu	
<b>Part I Agent-Based Computational Economics</b>	
<b>Dark Pool Usage and Equity Market Volatility</b> .....	17
Yibing Xiong, Takashi Yamada, and Takao Terano	
<b>Modelling Complex Financial Markets Using Real-Time Human-Agent Trading Experiments</b> .....	35
John Cartlidge and Dave Cliff	
<b>Does High-Frequency Trading Matter?</b> .....	71
Chia-Hsuan Yeh and Chun-Yi Yang	
<b>Modelling Price Discovery in an Agent Based Model for Agriculture in Luxembourg</b> .....	91
Sameer Rege, Tomás Navarrete Gutiérrez, Antonino Marvuglia, Enrico Benetto, and Didier Stilmant	
<b>Heterogeneity, Price Discovery and Inequality in an Agent-Based Scarf Economy</b> .....	113
Shu-Heng Chen, Bin-Tzong Chie, Ying-Fang Kao, Wolfgang Magerl, and Ragupathy Venkatachalam	
<b>Rational Versus Adaptive Expectations in an Agent-Based Model of a Barter Economy</b> .....	141
Shyam Gouri Suresh	
<b>Does Persistent Learning or Limited Information Matter in Forward Premium Puzzle?</b> .....	161
Ya-Chi Lin	

<b>Price Volatility on Investor’s Social Network</b> .....	181
Yangrui Zhang and Honggang Li	
<b>The Transition from Brownian Motion to Boom-and-Bust Dynamics in Financial and Economic Systems</b> .....	193
Harbir Lamba	
<b>Product Innovation and Macroeconomic Dynamics</b> .....	205
Christophre Georges	
<b>Part II New Methodologies and Technologies</b>	
<b>Measuring Market Integration: US Stock and REIT Markets</b> .....	223
Douglas W. Blackburn and N. K. Chidambaran	
<b>Supercomputer Technologies in Social Sciences: Existing Experience and Future Perspectives</b> .....	251
Valery L. Makarov and Albert R. Bakhtizin	
<b>Is Risk Quantifiable?</b> .....	275
Sami Al-Suwailem, Francisco A. Doria, and Mahmoud Kamel	
<b>Index</b> .....	305

# About the Editors

**Shu-Heng Chen** is a Distinguished Professor in the Department of Economics, National Chengchi University (NCCU), Taipei, Taiwan. He serves as the Director of the AI-ECON Research Center at NCCU as well as the editor-in-chief of the *Journal of New Mathematics and Natural Computation* (World Scientific) and *Journal of Economic Interaction and Coordination* (Springer), and the associate editor for *Computational Economics* (Springer) and *Evolutionary and Institutional Economics Review* (Springer). Prof. Chen holds a Ph.D. in Economics from the University of California at Los Angeles. His research interests include computational intelligence, agent-based computational economics, behavioral and experimental economics, neuroeconomics, computational social sciences, and digital humanities. He has more than 250 referred publications in international journals and edited book volumes. He is the author of the book, *Agent-Based Computational Economics: How the Ideas Originated and Where It Is Going* (published by Routledge), and *Agent-Based Modeling and Network Dynamics* (published by Oxford, co-authored with Akira Namatame).

**Ying-Fang Kao** is a computational social scientist and a research fellow at the AI-Econ Research Center, National Chengchi University, Taiwan. She received her Ph.D. in Economics from the University of Trento, Italy in 2013. Her research focuses on the algorithmic approaches to understanding decision-making in economics and social sciences. Her research interests include Classical Behavioural Economics, Computable Economics, Agent-Based Modelling, and Artificial Intelligence.

**Ragupathy Venkatachalam** is a Lecturer in Economics at the Institute of Management Studies, Goldsmiths, University of London, UK. He holds a Ph.D. from the University of Trento, Italy. Prior to this, he has held teaching and research positions at the Centre for Development Studies, Trivandrum (India) and AI-Econ Research Center, National Chengchi University, Taipei (Taiwan). His research areas include Computable Economics, Economic Dynamics, Agent-Based Computational Economics, and Methodology and History of Economic Thought.

**Ye-Rong Du** is an Associate Research Fellow at the Regional Development Research Center, Taiwan Institute of Economic Research, Taiwan. He received his Ph.D. in Economics from the National Chengchi University, Taiwan in 2013. His research focuses on the psychological underpinnings of economic behavior. His research interests include Behavioural Economics, Agent-Based Economics, and Neuroeconomics.
