Preface

In many situations found both in Nature and in human-built systems, a set of mixed signals is observed (frequently also with noise), and it is of great scientific and technological relevance to be able to isolate or separate them so that the information in each of the signals can be utilized.

Blind source separation (BSS) research is one of the more interesting emerging fields nowadays in the field of signal processing. It deals with the algorithms that allow the recovery of the original sources from a set of mixtures only. The adjective “blind” is applied because the purpose is to estimate the original sources without any a priori knowledge about either the sources or the mixing system. Most of the models employed in BSS assume the hypothesis about the independence of the original sources. Under this hypothesis, a BSS problem can be considered as a particular case of independent component analysis (ICA), a linear transformation technique that, starting from a multivariate representation of the data, minimizes the statistical dependence between the components of the representation. It can be claimed that most of the advances in ICA have been motivated by the search for solutions to the BSS problem and, the other way around, advances in ICA have been immediately applied to BSS.

ICA and BSS algorithms start from a mixture model, whose parameters are estimated from the observed mixtures. Separation is achieved by applying the inverse mixture model to the observed signals (separating or unmixing model). Mixture models usually fall into three broad categories: instantaneous linear models, convolutive models and nonlinear models, the first one being the simplest but, in general, not near realistic applications. The development and test of the algorithms can be accomplished through synthetic data or with real-world data. Obviously, the most important aim (and most difficult) is the separation of real-world mixtures. BSS and ICA have strong relations also, apart from signal processing, with other fields such as statistics and artificial neural networks.

As long as we can find a system that emits signals propagated through a mean, and those signals are received by a set of sensors and there is an interest in recovering the original sources, we have a potential field of application for BSS and ICA. Inside that wide range of applications we can find, for instance: noise reduction applications, biomedical applications, audio systems, telecommunications, and many others.

This volume comes out just 20 years after the first contributions in ICA and BSS appeared\(^1\). Thereinafter, the number of research groups working in ICA and BSS has been constantly growing, so that nowadays we can estimate that far more than 100 groups are researching in these fields.

As proof of the recognition among the scientific community of ICA and BSS developments there have been numerous special sessions and special issues in several well-

---

Independently, two years before, although without the scientific impact of the previous reference, the following contribution was published:

known conferences and journals, such as GRETSI, NOLTA, ISCAS, EUSIPCO, NIPS, ESANN, IWANN, etc. An important landmark in the development of ICA was the organization of the first conference dedicated to ICA and BSS: the 1st International Workshop on Blind Source Separation and Independent Component Analysis (ICA 1999), which occurred in Aussois (France) in 1999. This workshop has been taking place since then about every 18 months, in Helsinki, Finland (ICA 2000), San Diego, California, USA (ICA 2001), and Nara, Japan (ICA 2003).

This volume of Lecture Notes in Computer Science encompasses the contributions to ICA 2004 which was held in Granada (Spain), presenting new ideas and challenges for ICA and BSS. This volume is composed of 156 contributions, selected after a peer-review process from 203 original contributions. The manuscripts were organized into the following eight sections:

1. Theory and fundamentals
2. Linear models
3. Convolutional models
4. Nonlinear models
5. Speech processing applications
6. Image processing applications
7. Biomedical applications
8. Other applications

We would like to thank all members of the International Advisory and Program Committees, who evaluated many contributions in a short time schedule. Other volunteers participated in the reviewing process, to whom we express our gratitude.

We are also very grateful to the University of Granada, the MEC (Ministerio de Educación y Cultura), Consejería de Universidades of the Andalusian Regional Government, and the Spanish CICYT (Comisión Interministerial de Ciencia y Tecnología) for their generous help.

The editors would like to thank Springer-Verlag, in particular Mr. Alfred Hofmann, for their collaboration and attention.

Finally, many thanks to all the authors who submitted their contributions and who made this volume possible.

September 2004

Underdetermined Blind Separation of Convolutive Mixtures
of Speech with Directivity Pattern Based Mask and ICA .................... 898
   Shoko Araki, Shoji Makino, Hiroshi Sawada, and Ryo Mukai

**Image Processing Applications**

A Digital Watermarking Technique Based on ICA Image Features .......... 906
   Wei Lu, Jian Zhang, Xiaobing Sun, and Kanzo Okada

A Model for Analyzing Dependencies Between Two ICA Features
in Natural Images ................................................................. 914
   Mika Inki

An Iterative Blind Source Separation Method for Convolutive Mixtures
of Images .................................................................................. 922
   Marc Castella and Jean-Christophe Pesquet
Astrophysical Source Separation Using Particle Filters .......................... 930
  Mauro Costagli, Ercan E. Kuruoğlu, and Alijah Ahmed

Independent Component Analysis in the Watermarking of Digital Images .... 938
  Juan José Murillo-Fuentes

Spatio-chromatic ICA of a Mosaiced Color Image ............................. 946
  David Alleysson and Sabine Süsstrunk

An Extended Maximum Likelihood Approach for the Robust Blind
Separation of Autocorrelated Images from Noisy Mixtures ................. 954
  Ivan Gerace, Francesco Cricco, and Anna Tonazzini

Blind Separation of Spatio-temporal Data Sources ............................ 962
  Hilit Unger and Yehoshua Y. Zeevi

Data Hiding in Independent Components of Video ............................ 970
  Jiande Sun, Ju Liu, and Huibo Hu

Biomedical Applications

3D Spatial Analysis of fMRI Data on a Word Perception Task ............... 977
  Ingo R. Keck, Fabian J. Theis, Peter Gruber, Elmar W. Lang,
  Karsten Specht, and Carlos G. Puntonet

Decomposition of Synthetic Multi-channel Surface-Electromyogram
Using Independent Component Analysis ................................. 985
  Gonzalo A. García, Kazuya Maekawa, and Kenzo Akazawa

Denoising Using Local ICA and a Generalized Eigendecomposition
with Time-Delayed Signals ................................................. 993
  Peter Gruber, Kurt Stadlthanner, Ana Maria Tomé, Ana R. Teixeira,
  Fabian J. Theis, Carlos G. Puntonet, and Elmar W. Lang

MEG/EEG Source Localization Using Spatio-temporal Sparse Representations . 1001
  Alexey Polonsky and Michael Zibulevsky

Reliable Measurement of Cortical Flow Patterns Using Complex
Independent Component Analysis of Electroencephalographic Signals ....... 1009
  Jörn Anemüller, Terrence J. Sejnowski, and Scott Makeig

Sensor Array and Electrode Selection for Non-invasive Fetal
Electrocardiogram Extraction by Independent Component Analysis ......... 1017
  Frédéric Vrins, Christian Jutten, and Michel Verleysen

A Comparison of Time Structure and Statistically Based BSS Methods
in the Context of Long-Term Epileptiform EEG Recordings ............... 1025
  Christopher J. James and Christian W. Hesse
A Framework for Evaluating ICA Methods of Artifact Removal from Multichannel EEG ............................. 1033
Kevin A. Glass, Gwen A. Frishkoff, Robert M. Frank, Colin Davey,
Joseph Dien, Allen D. Malony, and Don M. Tucker

A New Method for Eliminating Stimulus Artifact in Transient Evoked Otoacoustic Emission Using ICA .......... 1041
Ju Liu, Yu Du, Jing Li, and Kaibao Nie

An Efficient Time-Frequency Approach to Blind Source Separation Based on Wavelets .......................... 1048
Christian W. Hesse and Christopher J. James

Blind Deconvolution of Close-to-Orthogonal Pulse Sources Applied to Surface Electromyograms .................. 1056
Ales Holobar and Damjan Zazula

Denoising Mammographic Images Using ICA .................. 1064
P. Mayo, Francisco Rodenas Escriba, and Gumersindo Verdú Martín

Independent Component Analysis of Pulse Oximetry Signals Based on Derivative Skew .......................... 1072
Paul F. Stetson

Mixing Matrix Pseudostationarity and ECG Preprocessing Impact on ICA-Based Atrial Fibrillation Analysis .......................... 1079
José Joaquín Rieta, César Sánchez, Juan Manuel Sanchis, Francisco Castells,
and José Millet

‘Signal Subspace’ Blind Source Separation Applied to Fetal Magnetocardiographic Signals Extraction ............. 1087
Giulia Barbati, Camillo Porcaro, and Carlo Salustri

Suppression of Ventricular Activity in the Surface Electrocardiogram of Atrial Fibrillation .......................... 1095
Mathieu Lemay, Jean-Marc Vesin, Zenichi Ihara, and Lukas Kappenberger

Unraveling Spatio-temporal Dynamics in fMRI Recordings Using Complex ICA .......................... 1103
Jörn Anemüller, Jeng-Ren Duann, Terrence J. Sejnowski, and Scott Makeig

Wavelet Domain Blind Signal Separation to Analyze Supraventricular Arrhythmias from Holter Registers ........ 1111
César Sánchez, José Joaquín Rieta, Francisco Castells, Raúl Alcaraz,
and José Millet

Other Applications

A New Auditory-Based Index to Evaluate the Blind Separation Performance of Acoustic Mixtures ............. 1118
Juan Manuel Sanchis, José Joaquín Rieta, Francisco Castells, and José Millet
