Preface

Formal engineering methods are changing the way that software systems are developed. With language and tool support, they are being used for automatic code generation, and for the automatic abstraction and checking of implementations. In the future, they will be used at every stage of development: requirements, specification, design, implementation, testing, and documentation.

The ICFEM series of conferences aims to bring together those interested in the application of formal engineering methods to computer systems. Researchers and practitioners, from industry, academia, and government, are encouraged to attend, and to help advance the state of the art. Authors are strongly encouraged to make their ideas as accessible as possible, and there is a clear emphasis upon work that promises to bring practical, tangible benefit: reports of case studies should have a conceptual message, theory papers should have a clear link to application, and papers describing tools should have an account of results.

ICFEM 2004 was the sixth conference in the series, and the first to be held in North America. Previous conferences were held in Singapore, China, UK, Australia, and Japan. The Programme Committee received 110 papers and selected 30 for presentation. The final versions of those papers are included here, together with 2-page abstracts for the 5 accepted tutorials, and shorter abstracts for the 4 invited talks.

We would like to thank: Dines Bjørner, for his work in organizing speakers and sponsors; Jin Song Dong and Jim Woodcock, for an excellent handover from ICFEM 2003; Joxan Jaffar, J Strother Moore, Peter Neumann, and Amitabh Srivastava, for agreeing to address the conference; the authors, for submitting their work; the Programme Committee, and their colleagues, for their reviews; and Springer, for their help with publication.

ICFEM 2004 was organized by Microsoft Research in Seattle, with additional support and sponsorship from the University of Oxford, the United Nations University, Formal Methods Europe, NASA, and ORA Canada.

November 2004

# Table of Contents

## Tutorials

Model-Based Development: Combining Engineering Approaches and Formal Techniques  
*Bernhard Schätz* .................................................. 1

Tutorial on the RAISE Language, Method and Tools  
*Chris George* .................................................. 3

Model-Based Testing with Spec#  
*Jonathan Jacky* ................................................ 5

Formal Engineering for Industrial Software Development – An Introduction to the SOFL Specification Language and Method  
*Shaoying Liu* .................................................. 7

Tutorial: Software Model Checking  
*Edmund Clarke, Daniel Kroening* ................................ 9

## Invited Talks

Engineering Quality Software  
*Amitabh Srivastava* ............................................ 11

When Can Formal Methods Make a Real Difference?  
*Peter G. Neumann* ............................................. 12

On the Adoption of Formal Methods by Industry: The ACL2 Experience  
*J Strother Moore* ............................................... 13

A CLP Approach to Modelling Systems  
*Joxan Jaffar* .................................................. 14

## Full Papers

Multi-prover Verification of C Programs  
*Jean-Christophe Filliâtre, Claude Marché* ...................... 15

Memory-Model-Sensitive Data Race Analysis  
*Yue Yang, Ganesh Gopalakrishnan, Gary Lindstrom* ........... 30

Formal Models for Web Navigations with Session Control and Browser Cache  
*Jessica Chen, Xiaoshan Zhao* .................................... 46
Managing Verification Activities Using SVM
  Bill Aldrich, Ansgar Fehnker, Peter H. Feiler, Zhi Han,
  Bruce H. Krogh, Eric Lim, Shiva Sivashankar ......................... 61

A General Model for Reachability Testing of Concurrent Programs
  Richard H. Carver, Yu Lei .............................................. 76

A Knowledge Based Analysis of Cache Coherence
  Kai Baukus, Ron van der Meyden........................................ 99

A Propositional Logic-Based Method for Verification of Feature Models
  Wei Zhang, Haiyan Zhao, Hong Mei ..................................... 115

Deriving Probabilistic Semantics Via the ‘Weakest Completion’
  He Jifeng, Carroll Morgan, Annabelle McIver ......................... 131

CSP Representation of Game Semantics for Second-Order Idealized
  Algol
  Aleksandar Dimovski, Ranko Lazić ................................... 146

An Equational Calculus for Alloy
  Marcelo F. Frias, Carlos G. López Pombo, Nazareno M. Aguirre .... 162

Guiding Spin Simulation
  Nicolae Goga, Judi Romijn .............................................. 176

Linear Inequality LTL (iLTL): A Model Checker for Discrete Time
  Markov Chains
  YoungMin Kwon, Gul Agha .............................................. 194

Software Model Checking Using Linear Constraints
  Alessandro Armando, Claudio Castellini, Jacopo Mantovani .......... 209

Counterexample Guided Abstraction Refinement Via Program
  Execution
  Daniel Kroening, Alex Groce, Edmund Clarke ........................ 224

Faster Analysis of Formal Specifications
  Fabrice Bouquet, Bruno Legeard, Mark Utting, Nicolas Vacelet ..... 239

Bridging Refinement of Interface Automata to Forward Simulation of
  I/O Automata
  Yanjun Wen, Ji Wang, Zhichang Qi .................................... 259

Learning to Verify Safety Properties
  Abhay Vardhan, Koushik Sen, Mahesh Viswanathan, Gul Agha ...... 274

Automatic Extraction of Object-Oriented Observer Abstractions from
  Unit-Test Executions
  Tao Xie, David Notkin ................................................. 290
