Preface

The beginning of the twenty-first century is characterized by global markets, and the mobility of people is becoming an important fact of life. Consequently, the mobile user is demanding appropriate technical solutions to make use of customized information and communication services.

In this context the notion of next-generation networks (NGNs), which are driven by the convergence of the entertainment sector, the mobile Internet, and fixed/mobile telecommunications, is emerging. Such NGNs are aggregating a variety of different access networks and supporting the seamless connection of an open set of end-user devices, and due to the adoption of an all-IP network paradigm they enable a much better integration of voice and data services. Coincidently the buzzword ‘fixed mobile convergence’ (FMC) describes the current trend towards providing common services across fixed and mobile networks resulting in the medium term in the full integration of fixed and mobile telecommunication networks.

The adoption of appropriate middleware technologies and the provision of so-called service delivery platforms driven by the ongoing innovation in the field of information technologies provides today the technical foundation for supporting terminal, personal and service mobility and thus the implementation of real seamless information and communication services. Furthermore, users are nowadays looking, in light of an omnipresent service environment, for a much higher degree of customization and context awareness in the services they use.

The papers in this volume look at these enabling mobility-aware technologies and their use for implementing mobility-aware and context-aware applications. Particularly they look at NGN service delivery platform technologies and service control issues for multimedia services, mobility-aware middleware and mobile agent platform technologies, solutions for wireless networks, mobility tracking technologies, new mobile applications and intelligent appliances, context-aware and policy-based and autonomic communications, ambient networks and smart end systems, issues and applications for mobile ad hoc networks and sensor networks, and security technologies for NGNs and context-aware environments.

We would like to express our appreciation and thanks to the authors for their contributions as well as the technical Program Committee and the reviewers who helped to put together an excellent technical program for the workshop. Special thanks are due to Edmundo Madeira and Ahmed Karmouch, who kindly contributed their time and effort to help with the organization of the review process and the technical program.

August 2005

Thomas Magedanz
Organization

General Co-chairs
Ahmed Karmouch, University of Ottawa, Canada
Samuel Pierre, École Polytechnique de Montréal, Canada

Program Co-chairs
Thomas Magedanz, Technical University of Berlin/Fraunhofer FOKUS, Germany
Iakovos Venieri, National Technical University of Athens, Greece

Tutorial Chair
Steven Chamberland, École Polytechnique de Montréal, Canada

Publicity Co-chairs
Ronald Beaubrun, Université Laval, Canada
José Fernandez, École Polytechnique de Montréal, Canada

Local Arrangements Co-chairs
Betty Monplaisir, École Polytechnique de Montréal, Canada
Raymond Lévesque, Bureau des Congrès Universitaires, Canada

Steering Committee
Ahmed Karmouch, University of Ottawa, Canada
Thomas Magedanz, Technical University of Berlin/Fraunhofer FOKUS, Germany
Roch Glitho, Ericsson Canada, Canada
IEEE ComSoc Liaison
Algirdas Pakstas, London Metropolitan University, UK

In Cooperation with
IEEE Computer Society
IFIP

Program Committee

# Table of Contents

Web Agent Supporting Transport Layer Mobility  
*Yong-Jin Lee, M. Atiquzzaman* ........................................... 1

A Network-Aware Truncating Module for Scalable Streams Saving Bandwidth for Overused Networks  
*B. Mathieu, Y. Carlinet, D. Massaloux, B. Kövesi, D. Deleam* ...... 12

APHIDS++: Evolution of A Programmable Hybrid Intrusion Detection System  
*Mohammed S. Alam, Abhishek Gupta, Jake Wires, Son Vuong* ...... 22

Challenges in Modeling and Disseminating Context Information in Ambient Networks  
*Dineshbalu Balakrishnan, May El Barachi, Ahmed Karmouch, Roch Glitho* ................................................ 32

A Co-designed Hardware/Software Architecture for Augmented Materials  
*Simon Dobson, Kieran Delaney, Kafil Mahmood Razeed, Sergey Tsvetkov* .............................................. 43

A Simulation Model for the Dynamic Allocation of Network Resources in a Competitive Wireless Scenario  
*Fernando Beltrán, Matthias Roggendorf* .......................... 54

An Adaptive Call Admission Control to Support Mobility in Next Generation Wireless Network  
*Joo-Hwan Seo, Jung Seok Lee, Ki-Jun Han* ..................... 65

Protecting Mobile Agent Loops  
*J. Cucurull, J. Ametller, J.A. Ortega-Ruiz, S. Robles, J. Borrell* .... 74

ContextWare Support for Network and Service Composition and Self-adaptation  
*Roel Ocampo, Lawrence Cheng, Zhaohong Lai, Alex Galis* ........ 84

Fixed Mobile Convergence: 3 Words, Many Perspectives  
*Italo Milanese, Carlo Alberto Licciardi* ........................... 96

Analysis of Movement Detection Process for IPv6 Mobile Nodes  
*Youn-Hee Han, Seung-Hee Hwang* ................................. 107
