*Editors' foreword*

Thirty-five scientists actively working in the field of the quantum studies on polymeric systems have gathered at the "Facultés Universitaires N.D. de la Paix" in Namur from February 11 till 14, 1979. Their aim was to review the actual state of the art in polymeric calculations and to define timely trends to be treated in a subsequent workshop.

The idea of this meeting was initiated by the Namur and Erlangen groups in the quantum theory of polymers and encouraged by their head institutions ("Facultés Universitaires N.D.P. de Namur" and "Universität Erlangen-Nürnberg"), by the "Centre Européen de Calcul Atomique et Moléculaire, CECAM", and by the "Laboratoire de Chimie Quantique of the University of Louvain".

This volume contains all the lectures of this symposium. It is our great pleasure to thank all the speakers for their most excellent lectures and for the clarity of their manuscripts.

Miss Patricia Lonnoy made a formidable and expert work in preparing the final form of these proceedings. Finally, the financial support provided by the "Facultés Universitaires de Namur", the "Fonds National Belge de la Recherche Scientifique (FNRS)" and the "Ministère Belge de l'Education Nationale et de la Culture (MENC)" is gratefully acknowledged.

July, 1979
