FOREWORD

This volume contains 11 invited papers and 44 short communications contributed for presentation at the 11th Symposium on Mathematical Foundations of Computer Science - MFCS '84, held at Prague, Czechoslovakia, September 3 - 7, 1984.

The symposium was organized by the Committee of Applied Cybernetics of the Czechoslovak Scientific and Technological Society in cooperation with the Faculty of Mathematics and Physics of Charles University, Prague, Computing Science Department of the Purkyně University, Brno, the Faculty of Natural Sciences of the Šafárik University, Košice, and the Federal Ministry for Technical and Investment Development.

The contributions in these Proceedings were selected from 107 papers submitted in response to the call for papers. The selection was made on the basis of originality and relevance to theoretical computer science by the international program committee.

The organizing committee of MFCS '84 consisted of M. Benešovský, M. Chytil, A. Goralčíková, J. Gregor, Š. Hudák, V. Koubek, L. Kučera, B. Miniberger, Z. Renc - organizing secretary, B. Sekerka, I. Vavrysová, M. Vlach - chairman.

In evaluating the submitted papers, the following referees assisted to the program committee members: J. Adámek, A. Andžans, K. R. Apt, W. Bartol, J. M. Barzdin, M. Ben-Or, S. L. Bloom, L. Boasson, A. Brandstädt, B. Chlebus, C. Choffrut, J. Dassow, O. Demuth, P. Enjalbert,

The editors wish to thank all those who submitted papers for consideration, and the program committee members with the referees for their meritorious work on evaluating the papers. Finally, the excellent cooperation of Springer-Verlag in the publication of this volume is highly appreciated.

Prague, May 1984 
Michal Chytil, Václav KoubeK
CONTENTS

INVITED LECTURES

J. L. Balcázar
Separating, strongly separating, and collapsing relativized complexity classes .......................................................................................... 1

A. L. Chistov and D. Yu. Grigoriev
Complexity of quantifier elimination in the theory of algebraically closed fields ................................................................. 17

J. Gruska
Systolic automata - power, characterizations, nonhomogeneity ................................................................. 32

Ch. M. Hoffmann
A note on unique decipherability ................................................................. 50

G. Hotz
Outline of an algebraic language theory ................................................................. 64

M. Jantzen
Thue systems and the Church-Rosser property ................................................................. 80

G. Longo
Limits, higher type computability and type-free languages ................................................................. 96

A. Mazurkiewicz
Traces, histories, graphs: instances of a process monoid ................................................................. 115
D. Perrin
Recent results on automata and infinite words ................. 134

F. P. Preparata
VLSI algorithms and architectures ............................. 149

A. L. Semenov
Decidability of monadic theories .............................. 162

COMMUNICATIONS

J. Albert
On the Ehrenfeucht conjecture on test sets and its dual version 176

J. L. Balcázar, R. V. Book, and U. Schöning
Sparse oracles, lowness, and highness .......................... 185

J. Beauquier and L. Thimonier
Computability of probabilistic parameters for some classes of formal languages ........................................... 194

F. J. Brandenburg
A truely morphic characterization of recursively enumerable sets ................................................................. 205

M. Broy
On the Herbrand Kleene universe for nondeterministic computations .............................................................. 214

H. D. Burkhard
An investigation of controls for concurrent systems by abstract control languages ........................................... 223
A. Černý
On generalized words of Thue - Morse .......................... 232

M. Chrobak
Nondeterminism is essential for two-way counter machines ...... 240

G. Costa and C. Stirling
Weak and strong fairness in CCS ............................... 245

R. P. Daley and C. H. Smith
On the complexity of inductive inference ...................... 255

H. Edelsbrunner and E. Welzl
Monotone edge sequences in line arrangements and applications 265

P. Enjalbert and M. Michel
Many-sorted temporal logic for multiprocesses systems ........... 273

Z. Habasiński
Process logics: two decidability results ....................... 282

A. Hemmerling and K. Kriegel
On searching of special classes of mazes
and finite embedded graphs .................................... 291

M. Hennessy and C. Stirling
The power of future perfect in program logics ................. 301

J. Hromkovič
Hierarchy of reversal and zerotesting bounded
multicounter machines ........................................ 312
J. Hromkovič
On the power of alternation in finite automata ................ 322

O. H. Ibarra and L. E. Rosier
The equivalence problem and correctness formulas
for a simple class of programs ................................ 330

J. W. Jaromczyk
Lower bounds for polygon simplicity testing and other problems 339

M. I. Kanovič
A uniform independence of invariant sentences .................... 348

J. Karhumäki and H. C. M. Kleijn
On the equivalence of compositions of morphisms and
inverse morphisms on regular languages ........................ 355

W. Kowalczyk
Some connections between presentability of complexity classes
and the power of formal systems of reasoning .................. 364

L. Kučera
Finding a maximum flow in /s,t/-planar network in linear
expected time ...................................................... 370
