Contents

I)	Introduction and Survey	1
	1) Basic Features of First-Order Phase Transitions	2
	2) Phase Transitions in Low Dimensional Systems	8
	3) Scope of this Book	10
II)	Equilibrium Phase Transitions	16
	1) Dynamics of Phase Separation	16
	a) Nucleation Theory	18
	b) Phase Separation in Binary Mixtures	24
	c) Spinodal Decomposition in One-Component Systems	32
	d) Spinodal Decomposition as Generalized Nucleation Theory	45
	2) Phase Transitions in Thin Films	47
	a) The Solid-Liquid Phase Transition	48
	b) The Commensurate-Incommensurate Transition	62
III)	Nonequilibrium Phase Transitions	74
	1) The Plasma Phase Transition in Highly Excited Semiconductors	74
	a) Electron-Hole Droplet Nucleation in Indirect-Gap Semiconductors	77
	b) The Plasma Phase Transition in Direct-Gap Semiconductors	86
	2) Optical Nonequilibrium Systems	94
	a) First-Order Nonequilibrium Phase Transitions in Lasers	95
	b) Optical Bistability of Two-Level Atoms in a Resonator	98
	c) Deterministic Chaos in Bistable Systems	108
	d) Dispersive Bistability in Semiconductor Etalons	114
	e) Optical Bistability due to Induced Absorption	129
