Preface

The symposia on Fundamentals of Computation Theory are held every two years. Following the tradition established at the first FCT 1977, the conference brings together specialists in theoretical fields of Computer Science from various countries and stimulates mathematical research in theoretical computer science. Topics of interest for the satellite workshop on Efficient Algorithms WEA 2001 are: computational complexity, graph and network algorithms, flow and routing algorithms, coloring and partitioning, cuts and connectivity, packing and covering, scheduling algorithms, approximation algorithms, inapproximability results, online problems, randomized algorithms, integer programming, semidefinite programming, algorithmic geometry, polyhedral combinatorics, branch and bound algorithms, cutting plane algorithms, and various applications.

The 13th FCT was held in Riga-Lielupe, August 22-24, 2001 with an additional day (August 25) for the satellite workshop WEA 2001. The previous meetings were held in the following cities:

- Poznan-Kórnik, Poland, 1977
- Wendish-Rietz, Germany, 1979
- Szeged, Hungary, 1981
- Borgholm, Sweden, 1983
- Cottbus, Germany, 1985
- Kazan, Russia, 1987
- Szeged, Hungary, 1989
- Gosen-Berlin, Germany, 1991
- Szeged, Hungary, 1993
- Dresden, Germany, 1995
- Kraków, Poland, 1997
- Iasi, Romania, 1999

This year the number of submitted papers was high. The Program Committee decided to accept 28 submissions as regular papers and 15 submissions as short papers. Additionally, the Program Committee of WEA 2001 accepted 8 papers. This volume contains all the contributed papers. The invited speakers were:

- Jānis Bārzdinš (Riga, Latvia)
- Gilles Brassard (Montreal, Canada)
- Klaus Jansen (Kiel, Germany)
- Juhani Karhumäki (Turku, Finland)
- Marek Karpinski (Bonn, Germany)
- Boris Plotkin (Jerusalem, Israel)
- Umesh Vazirani (Berkeley, USA)
The invited speakers for WEA 2001 were:

- Foto Afrati (Athens, Greece)
- Andreas Brandstädt (Rostock, Germany)
- Luisa Gargano (Salerno, Italy)
- Stéphane Perennes (Sophia-Antipolis, France)

All papers published in the workshop proceedings were selected by the program committee on the basis of referee reports. Each paper was reviewed by at least three referees who judged the papers for originality, quality, and consistency with the topics of the conference. The Program Committee consisted of:

- Andris Ambainis (Berkeley, USA)
- Setsuo Arikawa (Fukuoka, Japan)
- Yuri Breitbart (Bell Labs, USA)
- Cristian Calude (Auckland, New Zealand)
- Bogdan Chlebus (Warsaw, Poland)
- Alexander Dikovsky (Nantes, France)
- Rūsiņš Freivalds (Riga, Latvia), Chair
- Jozef Gruska (Brno, Czech Republic)
- Tero Harju (Turku, Finland)
- Kazuo Iwama (Kyoto, Japan)
- Aleksander Letichevskij (Kiev, Ukraine)
- Andrzej Lingas (Lund, Sweden)
- Christoph Meinel (Trier, Germany)
- Valery Nepomniaschy (Novosibirsk, Russia)
- Jaan Penjam (Tallinn, Estonia)
- Anatol Slissenko (Paris, France)
- Carl Smith (Maryland, USA)
- Esko Ukkonen (Helsinki, Finland)
- Eli Upfal (Brown, USA)
- Mars Valiev (Moscow, Russia)

The Program Committee of the Workshop on Efficient Algorithms WEA 2001 worked in close touch with the Program Committee of FCT 2001 but made their decisions separately. This Program Committee consisted of:

- Yossi Azar (Tel-Aviv, Israel)
- Evripidis Bampis (Evry, France), Co-chair
- Michael Bender (Stony Brook, USA)
- Thomas Erlebach (Zurich, Switzerland)
- Wenceslas Fernandez De La Vega (Orsay, France)
- Wen-Lian Hsu (Academia Sinica, Taiwan)
- Klaus Jansen (Kiel, Germany), Co-chair
- Elias Koutsoupias (Athens, Greece and Los Angeles, USA)
- Jan Kratochvíl (Prague, Czech Republic)
- Seffi Naor (Haifa, Israel)
- Takao Nishizeki (Tohoku, Japan)
We would like to thank all the authors who responded to the call for papers, our invited speakers, and the referees.

Furthermore, we thank the members of the Organizing Committee:

- Baiba Apine
- Juris Borzovs, Chair
- Māra Cepīte
- Ārija Deme
- Mārtiņš Dīcis
- Andrejs Dubrovskis
- Rudite Ekmane
- Anita Ermuša
- Rūsiņš Freivalds
- Marats Golovkins
- Filips Jelisejevs
- Anita Kalniņa
- Maksims Kravcevs
- Ieva Lapina
- Ināra Opmane
- Raitis Ozols
- Jānis Plūme
- Juris Smotrovs
- Ārija Sproģe
- Oksana Ščegulnaja
- Eduards Zvirbulis
- Zaiga Zvirbule

We gratefully acknowledge sponsorship from the Latvian Council of Science, the EU thematic network APPOL *Approximation and On-line Algorithms*, the Institute of Computer Science and Applied Mathematics of the Christian-Albrechts-Universität zu Kiel, and the Department of Computer Science of the University of Evry.

May 2001

Table of Contents

Invited Papers

Towards Axiomatic Basis of Inductive Inference .......................... 1
\textit{Jānis Bārzdinš, Rūsiņš Freivalds, Carl H. Smith}

Approximation Algorithms for Fractional Covering and Packing Problems, and Applications .......................... 14
\textit{Klaus Jansen}

Challenges of Commutation (An Advertisement) .......................... 15
\textit{Juhani Karhumäki}

Approximating Bounded Degree Instances of NP-Hard Problems ..... 24
\textit{Marek Karpinski}

Universal Algebra and Computer Science ............................... 35
\textit{Boris Plotkin, Tanya Plotkin}

Quantum Algorithms .................................................. 45
\textit{Umesh Vazirani}

Regular Papers

A Discrete Approximation and Communication Complexity Approach to the Superposition Problem .......................... 47
\textit{Farid Ablayev, Svetlana Ablayeva}

On Computational Power of Quantum Branching Programs .......... 59
\textit{Farid Ablayev, Aida Gainutdinova, Marek Karpinski}

Efficient Computation of Singular Moduli with Application in Cryptography ........................................... 71
\textit{Harald Baier}

Ambainis-Freivalds’ Algorithm for Measure-Once Automata ............ 83
\textit{Aija Bērziņa, Richard Bonner}

Are There Essentially Incomplete Knowledge Representation Systems? .... 94
\textit{Jānis Cirulis}

Best Increments for the Average Case of Shellsort ........................ 106
\textit{Marcin Ciura}

Approximating Minimum Cocolourings .................................. 118
\textit{Fedor V. Fomin, Dieter Kratsch, Jean-Christophe Novelli}
Curved Edge Routing .................................................. 126
  Karlis Freivalds

Time/Space Efficient Compressed Pattern Matching ................. 138
  Leszek Gasiensieck, Igor Potapov

Modelling Change with the Aid of Knowledge and Time ............. 150
  Bernhard Heinemann

If P ≠ NP then Some Strongly Noninvertible Functions Are Invertible . . 162
  Lane A. Hemaspaandra, Kari Pasanen, Jörg Rothe

Prediction-Preserving Reducibility with Membership Queries on Formal
  Languages .................................................................. 172
  Kouichi Hirata, Hiroshi Sakamoto

Dense Families and Key Functions of Database Relation Instances .... 184
  Jouni Järvinen

On the Complexity of Decidable Cases of Commutation Problem
  for Languages ............................................................ 193
  Juhani Karhumäki, Wojciech Plandowski, Wojciech Rytter

Cones, Semi-AFPs, and AFPs of Algebraic Power Series .............. 204
  Werner Kuich

New Small Universal Circular Post Machines .......................... 217
  Manfred Kudlek, Yurii Rogozhin

Divisibility Monoids: Presentation, Word Problem, and Rational Languages ................................................ 227
  Dietrich Kuske

Concurrency in Timed Automata ........................................... 240
  Ruggero Lanotte, Andrea Maggiolo-Schettini, Simone Tini

How Powerful Are Infinite Time Machines? ............................. 252
  Grégory Lafitte

Equivalence Problem of Composite Class Diagrams .................. 264
  Girts Linde

Differential Approximation Results for the Traveling Salesman Problem
  with Distances 1 and 2 .................................................. 275
  Jérôme Monnot, Vangelis Th. Paschos, Sophie Toulouse

On the Category of Event Structures with Dense Time .............. 287
  Nataly S. Moskaljova, Irina B. Virbitskaite
Closure of Polynomial Time Partial Information Classes under Polynomial Time Reductions .................................................. 299
  Arfst Nickelsen and Till Tantau

Monte-Carlo Polynomial versus Linear Time - The Truth-Table Case .... 311
  Robert Rettinger, Rutger Verbeek

Relating Automata-Theoretic Hierarchies to Complexity-Theoretic Hierarchies ....................................................... 323
  V.L. Selivanov

Polynomial Time Algorithms for Finding Unordered Tree Patterns with Internal Variables ......................................................... 335
  Takayoshi Shoudai, Tomoyuki Uchida, Tetsuhiro Miyahara

Piecewise and Local Threshold Testability of DFA ......................... 347
  A.N. Trahtman

Compositional Homomorphisms of Relational Structures (Modeled as Multialgebras) ......................................................... 359
  Michal Walicki, Adis Hodzic, Sigurd Meldal

Short Papers

Representation of Autonomous Automata ........................................ 372
  Jānis Buls, Vaira Buža, Roberts Glauđiņš

Quantum Reversibility and a New Model of Quantum Automaton ........ 376
  Massimo Pica Ciamarra

Space-Efficient 1.5-Way Quantum Turing Machine .......................... 380
  Andrej Dubrovsky

A Combinatorial Aggregation Algorithm for Stationary Distribution of a Large Markov Chain .................................................... 384
  Anna Gambin, Piotr Pokarowski

A Primitive for Proving the Security of Every Bit and about Universal Hash Functions & Hard Core Bits ................................. 388
  Eike Kiltz

Pythagorean Triples in Unification Theory of Nilpotent Rings ............ 392
  Ruvim Lipyanski

Two-States Bilinear Intrinsically Universal Cellular Automata ............ 396
  Nicolas Ollinger

Linear Time Recognizer for Subsets of ZZ² ................................... 400
  Christophe Papazian, Eric Rémila
