## Preface

SAGA 2001, the first Symposium on Stochastic Algorithms, Foundations and Applications, took place on December 13–14, 2001 in Berlin, Germany. The present volume comprises contributed papers and four invited talks that were included in the final program of the symposium.

Stochastic algorithms constitute a general approach to finding approximate solutions to a wide variety of problems. Although there is no formal proof that stochastic algorithms perform better than deterministic ones, there is evidence by empirical observations that stochastic algorithms produce for a broad range of applications near-optimal solutions in a reasonable run-time.

The symposium aims to provide a forum for presentation of original research in the design and analysis, experimental evaluation, and real-world application of stochastic algorithms. It focuses, in particular, on new algorithmic ideas involving stochastic decisions and exploiting probabilistic properties of the underlying problem domain. The program of the symposium reflects the effort to promote cooperation among practitioners and theoreticians and among algorithmic and complexity researchers of the field. In this context, we would like to express our special gratitude to DaimlerChrysler AG for supporting SAGA 2001.

The contributed papers included in the proceedings present results in the following areas: Network and distributed algorithms; local search methods for combinatorial optimization with application to constraint satisfaction problems, manufacturing systems, motor control unit calibration, and packing flexible objects; and computational learning theory.

The invited talk by Juraž Hromkovič surveys fundamental results about randomized communication complexity. In the talk, the efficiency of randomized communication is related to deterministic and nondeterministic communication models. Martin Sauerhoff discusses randomized variants of branching programs which allow the relative power of deterministic, nondeterministic, and randomized algorithms to be studied. Recent results on random 3-SAT formulas are summarized by Gregory Sorkin. The focus is on bounds for their density and shows how to tune so-called myopic algorithms optimally. Thomas Zeugmann gives an overview on stochastic finite learning that connects concepts from PAC learning and models of inductive inference learning.

Our special thanks go to all who supported SAGA 2001, to all authors who submitted papers, to all members of the program committee who provided very detailed referee reports, to the invited speakers, to the organizing committee, and to the sponsoring institutions.

# Organization

SAGA 2001 was organized by the GMD - National Research Center for Information Technology, Institute for Computer Architecture and Software Engineering FIRST, Berlin.

## Organization Committee

Andreas Jakoby	Peggy Krüger
Babette Neumann	Friedrich Wilhelm Schröer
Kathleen Steinhöfel	Armin Wolf

## Program Committee

Andreas Albrecht (University of Hertfordshire, UK)  
Juraj Hromkovič (RWTH Aachen, Germany)  
Oktay Kasim-Zade (Moscow State University, Russia)  
Frieder Lohnert (DaimlerChrysler AG, Germany)  
Evelyne Lutton (INRIA, France)  
Dirk Mattfeld (University of Bremen, Germany)  
Heinz Mühlenbein (GMD AIS, Germany)  
Christian Scheideler (Johns Hopkins University, USA)  
Gregory Sorkin (IBM Research, NY, USA)  
Kathleen Steinhöfel (Chair, GMD FIRST, Germany)  
Toby Walsh (University of York, UK)  
Peter Widmayer (ETH Zurich, Switzerland)  
CK Wong (The Chinese University, Hong Kong)  
Thomas Zeugmann (Medical University of Lübeck, Germany)

## Sponsoring Institutions

DaimlerChrysler AG, Germany  
IT Service Omikron GmbH

## Table of Contents

Invited Talk	
Randomized Communication Protocols (A Survey) . . . . .	1
<i>Juraj Hromkovič</i>	
Optimal Mutation Rate Using Bayesian Priors	
for Estimation of Distribution Algorithms . . . . .	33
<i>Thilo Mahnig, Heinz Mühlenbein</i>	
An Experimental Assessment of a Stochastic, Anytime, Decentralized,	
Soft Colourer for Sparse Graphs . . . . .	49
<i>Stephen Fitzpatrick, Lambert Meertens</i>	
Invited Talk	
Randomized Branching Programs . . . . .	65
<i>Martin Sauerhoff</i>	
Yet Another Local Search Method for Constraint Solving . . . . .	73
<i>Philippe Codognet, Daniel Diaz</i>	
An Evolutionary Algorithm for the Sequence Coordination	
in Furniture Production . . . . .	91
<i>Carlo Meloni</i>	
Evolutionary Search for Smooth Maps	
in Motor Control Unit Calibration . . . . .	107
<i>Jan Poland, Kosmas Knödler, Alexander Mitterer,</i>	
<i>Thomas Fleischhauer, Frank Zuber-Goos, Andreas Zell</i>	
Invited Talk	
Some Notes on Random Satisfiability . . . . .	117
<i>Gregory B. Sorkin</i>	
Prospects for Simulated Annealing Algorithms	
in Automatic Differentiation . . . . .	131
<i>Uwe Naumann, Peter Gottschling</i>	
Optimization and Simulation: Sequential Packing of Flexible Objects	
Using Evolutionary Algorithms . . . . .	145
<i>Henning Behnke, Michael Kolonko, Ulrich Mertins, Stefan Schnitter</i>	
Invited Talk	
Stochastic Finite Learning . . . . .	155
<i>Thomas Zeugmann</i>	

VIII Table of Contents

Sequential Sampling Algorithms: Unified Analysis and Lower Bounds . . . . .	173
<i>Ricard Gavaldà, Osamu Watanabe</i>	
Approximate Location of Relevant Variables under the Crossover Distribution . . . . .	189
<i>Peter Damaschke</i>	
<b>Author Index</b> . . . . .	203
