The Editorial Policy for Proceedings

The series Lecture Notes in Physics reports new developments in physical research and teaching – quickly, informally, and at a high level. The proceedings to be considered for publication in this series should be limited to only a few areas of research, and these should be closely related to each other. The contributions should be of a high standard and should avoid lengthy redraftings of papers already published or about to be published elsewhere. As a whole, the proceedings should aim for a balanced presentation of the theme of the conference including a description of the techniques used and enough motivation for a broad readership. It should not be assumed that the published proceedings must reflect the conference in its entirety. (A listing or abstracts of papers presented at the meeting but not included in the proceedings could be added as an appendix.)

When applying for publication in the series Lecture Notes in Physics the volume's editor(s) should submit sufficient material to enable the series editors and their referees to make a fairly accurate evaluation (e.g. a complete list of speakers and titles of papers to be presented and abstracts). If, based on this information, the proceedings are (tentatively) accepted, the volume's editor(s), whose name(s) will appear on the title pages, should select the papers suitable for publication and have them refereed (as for a journal) when appropriate. As a rule discussions will not be accepted. The series editors and Springer-Verlag will normally not interfere with the detailed editing except in fairly obvious cases or on technical matters.

Final acceptance is expressed by the series editor in charge, in consultation with Springer-Verlag only after receiving the complete manuscript. It might help to send a copy of the authors' manuscripts in advance to the editor in charge to discuss possible revisions with him. As a general rule, the series editor will confirm his tentative acceptance if the final manuscript corresponds to the original concept discussed, if the quality of the contribution meets the requirements of the series, and if the final size of the manuscript does not greatly exceed the number of pages originally agreed upon. The manuscript should be forwarded to Springer-Verlag shortly after the meeting. In cases of extreme delay (more than six months after the conference) the series editors will check once more the timeliness of the papers. Therefore, the volume's editor(s) should establish strict deadlines, or collect the articles during the conference and have them revised on the spot. If a delay is unavoidable, one should encourage the authors to update their contributions if appropriate. The editors of proceedings are strongly advised to inform contributors about these points at an early stage.

The final manuscript should contain a table of contents and an informative introduction accessible also to readers not particularly familiar with the topic of the conference. The contributions should be in English. The volume's editor(s) should check the contributions for the correct use of language. At Springer-Verlag only the prefaces will be checked by a copy-editor for language and style. Grave linguistic or technical shortcomings may lead to the rejection of contributions by the series editors. A conference report should not exceed a total of 500 pages. Keeping the size within this bound should be achieved by a stricter selection of articles and not by imposing an upper limit to the length of the individual papers. Editors receive jointly 30 complimentary copies of their book. They are entitled to purchase further copies of their book at a reduced rate. As a rule no reprints of individual contributions can be supplied. No royalty is paid on Lecture Notes in Physics volumes. Commitment to publish is made by letter of interest rather than by signing a formal contract. Springer-Verlag secures the copyright for each volume.

The Production Process

The books are hardbound, and the publisher will select quality paper appropriate to the needs of the author(s). Publication time is about ten weeks. More than twenty years of experience guarantee authors the best possible service. To reach the goal of rapid publication at a low price the technique of photographic reproduction from a camera-ready manuscript was chosen. This process shifts the main responsibility for the technical quality considerably from the publisher to the authors. We therefore urge all authors and editors of proceedings to observe very carefully the essentials for the preparation of camera-ready manuscripts, which we will supply on request. This applies especially to the quality of figures and halftones submitted for publication. In addition, it might be useful to look at some of the volumes already published. As a special service, we offer free of charge \LaTeX and \TeX macro packages to format the text according to Springer-Verlag's quality requirements. We strongly recommend that you make use of this offer, since the result will be a book of considerably improved technical quality. To avoid mistakes and time-consuming correspondence during the production period the conference editors should request special instructions from the publisher well before the beginning of the conference. Manuscripts not meeting the technical standard of the series will have to be returned for improvement.

Preface

The Mexican School of Astrophysics (*Escuela Mexicana de Astrofísica 1999: EMA99*) was held in the city of Guanajuato on August 4 – 11, 1999. It was the second of its kind and marked the beginning of a hopefully long series of such events in the future. Both the quality of the lectures and the enthusiasm of the participants made it a very fruitful event. Moreover, the beauty of the colorful city of Guanajuato, as well as its sparkling life, made a wonderful setting for the school.

In keeping with the spirit of the previous school, the goal was to present a small set of topics of high current interest to advanced students and researchers in physics and astrophysics. The school consisted of eight courses which are presented here as the eight chapters of this book. A few short conferences and a poster session allowed the participants to present their own work. Each lecturer was set the difficult task of starting from the basics and culminate by bringing the audience to the forefront of her/his field. As the reader will see, the written texts of these lectures successfully fulfill this double challenge.

Mexico City,
July 2000

Supporting Institutions of EMA99

The organizers of the *Escuela Mexicana de Astrofísica 1999* acknowledge financial support from the following institutions:

Academia Mexicana de Ciencias
Centro Latinoamericano de Física (CLAF)
Consejo Nacional de Ciencia y Tecnología (CONACyT)
Departamento de Astronomía, Universidad de Guanajuato
Departamento de Física, CINVESTAV del IPN
Deutsche Akademischer Austauschdienst
Fundación México-Estados Unidos para la Ciencia
Instituto de Astronomía, UNAM
Instituto de Ciencias Nucleares, UNAM
Instituto de Geofísica, UNAM
Instituto de Física, UNAM
Instituto de Física y Matemáticas, Universidad Michoacana de SNH
Instituto Nacional de Astrofísica, Óptica y Electrónica (INAOE)
Programa de Posgrado en Astronomía, UNAM
Programa de Posgrado en Ciencias Físicas, UNAM
Programa de Posgrado en Ciencias de la Tierra, UNAM

Organizing Committee of EMA99

Dany Page, Instituto de Astronomía, UNAM
Armando Arellano Ferro, Instituto de Astronomía, UNAM
Alberto Carramiñana, Departamento de Astrofísica, INAOE
Peter Hess, Instituto de Ciencias Nucleares, UNAM
Jorge Hirsch, Instituto de Ciencias Nucleares, UNAM
Tonatiuh Matos, Departamento de Física, CINVESTAV
Victor Migenes, Departamento de Astronomía, U. de Guanajuato
Lukas Nellen, Instituto de Ciencias Nucleares, UNAM
Maria Esther Ortiz, Instituto de Física, UNAM
Jose Francisco Valdes, Instituto de Geofísica, UNAM
Thomas Zannias, Instituto de Física y Matemáticas, U. Michoacana de SNH
