CONPAR 90 – VAPP IV
Joint International Conference on Vector and Parallel Processing
Zurich, Switzerland, September 10–13, 1990
Proceedings

Springer-Verlag
Berlin Heidelberg New York London
Paris Tokyo Hong Kong Barcelona
Preface

While parallel architectures were pure research vehicles some years ago, this situation has changed substantially. There are many commercial systems available now that compete for market segments in scientific computing. The 1990s are likely to become the decade of parallel processing.

The past decade has already seen the emergence of the two highly successful series of CONPAR and VAPP conferences on the subject of parallel processing. The *Vector and Parallel Processors in Computational Science* (VAPP) meetings were held in Chester (1981), Oxford (1984) and Liverpool (1987). The *International Conferences on Parallel Processing* (CONPAR) took place in Erlangen (1981), Aachen (1986) and Manchester (1988). Despite the importance of parallel architectures and parallel computing, the Standing Committees of both conference series got the impression that there are too many conferences, workshops, summer schools, and exhibitions at the moment. The idea of a joint conference came up. On one hand we succeeded because for the first time these conferences are being held together. During the preparations for this conference, however, several new meetings appeared, with the result that there is a tremendous number of events this year. The organizers of CONPAR 90 - VAPP IV are thus satisfied to see that their conference series is already quite mature. We have received such a lot of good and well-written papers that we had to reduce the number of published papers considerably. Whether CONPAR and VAPP continue as joint conferences in future is still open at the moment. Hopefully this joint conference series can be developed into the important European event.

This is the first time such a big conference on parallel processing is taking place in Switzerland. Returning home from the Frankfurt meeting in February 1989 where the final vote was given for a Zurich conference, it was a great relief to get so much support from colleagues. I would like to express my special thanks to Ernst Rothauser, who took the heavy load of coordinating all local arrangements and the organization.

I would also like to thank the other members of the Steering and Organizing Committees for their continuous help. Special thanks go to Peter Arbenz, Armin Friedli, Walter Gander, Hans-Jürgen Halin and Richard Wait. I wish to extend my sincere thanks to the members of the Program Committee for their contributions to the shaping of the conference program and their help in reviewing papers. I also express my gratitude to all other referees for their assistance in
this process. The idea of the Computation Race came up in an early lunch with Jürg Nievergelt. I would like to thank him as well as the Awards Committee for this and other enrichments of the conference program.

Two prominent computer architects offered their help in organizing this event. Professor Speiser will act as the Honorary Chairman and will address the conference with his keynote "Digital Electronics for 50 Years: No Limits to Growth?". Professor Händler, the founder of the CONPAR series, is acting as the Chairman of the Standing Committee. We are indebted to him for his continual advice on, and confidence in, our Zurich conference.

The preparation of the technical program was a time-consuming process. I would not have managed to fulfill all the deadlines without my assistants Stephan Gutzwiller and Stephan Waser, who carefully co-ordinated all steps and many times suffered with me. The secretaries Mrs. A. Mathys and Mrs. Rothauser helped a lot to ease our job. Let me thank them all.

No conference preparations can be made without initial funding. The Swiss Informatics Society/Swiss Chapter of the ACM and IEEE Switzerland Section provided this help without hesitation. GI-PARS, BCS-PPSG, and IEEE CS later co-operated.

We would like to thank ETH Zürich for acting as the host site, as it provides such a pleasant conference environment. Last but not least I would like to thank the University of Basel for providing an infrastructure which enabled us to organize the conference from a distance.

The proceedings in hand start with the keynote address given by the Honorary Chairman. Next come two papers given by invited speakers, V. Bhatkar and E. Odijk. The main part of the proceedings consists of 77 papers written by authors from 20 different countries. These contributed papers have been selected by an international program committee. The topics of the papers are manifold; please note that we have grouped the table of contents according to the session titles. We have also added the rules for the Computation Race for future reference. The results of this competition will be presented at the conference and possibly published later.

Now it is up to you, the conference participant and reader of these proceedings, to make the final assessment.

Basel, June 1990

H.Burkhart
Contents

Keynote Address
A. P. Speiser
*Digital Electronics for 50 Years: No Limits to Growth?* ............................................. 1

Invited Presentations
V. P. Bhatkar
*Parallel Computing: An Indian Perspective* .......................................................... 10
E.A.M. Odijk
*POOMA, POOL and Parallel Symbolic Computing: An Assessment* ............... 26

New Models of Computation
P. Evripidou and J-L. Gaudiot
*A Decoupled Data-Driven Architecture with Vectors and Macro Actors* ............ 39
*A Novel Paradigm of Parallel Computation and its Use to Implement Simple High Performance Hardware* ................................................................. 51
H. Kikuchi, T. Yukawa, K. Matsuzawa and T. Ishikawa
*Presto: A Bus-Connected Multiprocessor for a Rete-Based Production System* ...... 63

Performance Prediction, Analysis, and Measurement
A. Basu, S. Srinivas, K.G. Kumar and A. Paulraj
*A Model for Performance Prediction of Message Passing Multiprocessors Achieving Concurrency by Domain Decomposition* ...................................................... 75
G. Lyon and R. D. Snellick
*Workloads, Observables, Benchmarks and Instrumentation* .................................... 86
F. Sötz
*A Method for Performance Prediction of Parallel Programs* ....................................... 98

Parallel Linear Algebra
S. Bondeli
*Divide and Conquer: A New Parallel Algorithm for the Solution of a Tridiagonal Linear System of Equations* ........................................................... 108
J. Brehm, A. Böhm and J. Volkert
*Sparse Matrix Algorithms for SUPRENUM* ............................................................. 120
E. M. Daoudi and G. Libert
*Parallel Givens Factorization on a Shared Memory Multiprocessor* ...................... 131
Logic Programming

Gao Yaoqing, Sun Chengzheng and Hu Shouren
Study of a Parallel Inference Machine for Parallel Execution of Logic Programs .... 143

A. Gupta, A. Banerjea, V. Jha, V. Bafna and PCP Bhatt
Parallel Implementation of Logic Languages ............................................. 154

P. Kacsuk
Prolog Implementations on Parallel Computers ........................................ 166

Performance Monitoring and Debugging

B. Mohr
Performance Evaluation of Parallel Programs in Parallel and Distributed Systems ... 176

M. Moser
The ELAN Performance Analysis Environment ........................................ 188

M. Zitterbart
Monitoring and Debugging Transputer-Networks with NETMON-II ................. 200

Algorithms for Matrix Factorization

Ch. H. Bischof and Ph. G. Lacroute
An Adaptive Blocking Strategy for Matrix Factorizations ............................ 210

J. Du Croz, P. Mayes and G. Radicati
Factorizations of Band Matrices Using Level 3 BLAS ................................. 222

M. Hegland
On the Computation of Breeding Values ................................................ 232

Large-Grain Data Flow

Kechang Dai
Code Parallelization for the LGDG Large-Grain Dataflow Computation .......... 243

D. C. DiNucci and R. G. Babb II
Development of Portable Parallel Programs with Large-Grain Data Flow 2 ....... 253

O. C. Maquelin
ADAM: A Coarse-Grain Dataflow Architecture that Addresses the Load Balancing and Throttling Problems ..................................................... 265

S. B. Murer
A Latency Tolerant Code Generation Algorithm for a Coarse Grain Dataflow Machine ................................................................. 277

Compile-Time Analysis and Restructurers

R. Eigenmann, J. Hoeflinger, G. Jaxon and D. Padua
Cedar Fortran and Its Compiler ................................................................. 288
H. M. Gerndt and H. P. Zima
*Optimizing Communication in Superb* ....................................................... 300

Sang Lyul Min, Yarsun Hsu and Hyoung-Joo Kim
*A Design of Performance-optimized Control-based Synchronization* ................ 312

K. L. Spier and B. K. Szymanski
*Interprocess Analysis and Optimization in the Equational Language Compiler* ...... 324

**Architectures and Algorithms for Image Processing**

B. Chardonnens, R. D. Hersch and O. Kölbl
*Transputer Based Distributed Cartographic Image Processing* ............................. 336

Gu Qing Zuo and An Zhong Wang
*MPS – An Experimental Multi-Microprocessor Based Parallel System* .................. 347

W. L. Nowinski
*Parallel Implementation of the Convolution Method in Image Reconstruction* ........ 355

D. Stokar, A. Gunzinger, W. Guggenbühl, E. Hildebrand, S. Mathis, P. Schaeren, B. Schneuwly and M. Zeltner
*SYDAMA II: A Heterogeneous Multiprocessor System for Real Time Image Processing* .................................................. 365

**Interconnection Networks**

A. Harissis, C. Jam and A. Ambler
*Analysis and Design of Circuit Switching Interconnection Networks Using 4x4 Nodes* ................................. 374

R. Holzner and S. Tomann
*Design and Simulation of a Multistage Interconnection Network* ......................... 385

R. J. Richter
*A Reconfigurable Interconnection Network for Flexible Pipelining* .................... 397

**Load Balancing and the Mapping Problem**

J. E. Boillat and P. G. Kropf
*A Fast Distributed Mapping Algorithm* ...................................................... 405

F. Dehne and M. Gastaldo
*A Note on the Load Balancing Problem for Coarse Grained Hypercube Dictionary Machines* ........................................ 417

P. Eklund and M. Kaufmann
*Hierarchical Wiring in Multigrids* .............................................................. 423

**Efficient Use of Vector Processors**

L. Gross, P. Sternecker and W. Schönauer
*Optimal Data Structures for an Efficient Vectorized Finite Element Code* ............ 435
O. Haan and W. Waelde  
*FFTVPLIB, a Collection of Fast Fourier Transforms for Vectorprocessors* .......... 447

H. Weberpals  
*Improving the Vector Performance via Algorithmic Domain Decomposition* .......... 458

**Communication Issues**

J-Y. Blanc and D. Trystram  
*Implementation of Parallel Numerical Routines Using Broadcast Communication Schemes* ................................................................. 467

P. Istavrinos and L. Borrmann  
*A Process and Memory Model for a Parallel Distributed-Memory Machine* .......... 479

L. Mugwaneza, T. Muntean and I. Sakho  
*A Deadlock Free Routing Algorithm with Network Size Independent Buffering Space* ................................................................. 489

**Process Partitioning and Work Distribution**

R. Beccard and W. Ameling  
*From Object-Oriented Programming to Automatic Load Distribution* ................. 502

F. Bieler  
*Partitioning Programs into Processes* .......................................................... 513

R. Jakob and H. F. Jordan  
*An MIMD Execution Environment with a Fixed Number of Processes* ................. 525

**Performance Considerations**

B. A. W. Baugstø, J. F. Greipsland and J. Kamerbeek  
*Sorting Large Data Files on POOMA* .......................................................... 536

R. Knecht  
*Parallelizing Divide-and-Conquer Algorithms - Microtasking versus Autotasking* .... 548

E. Schnepf  
*The Performance of Linear Algebra Subprograms on the Siemens S Series* .......... 559

**Reconfigurable and Scalable Systems**

K. Boyanov and K. Yanev  
*A Family of Highly Parallel Computers* ..................................................... 569

F. Höpfl, J. Schirrmacher and M. Trent  
*A Distributed Shared Memory Multiprocessor Kit with Scalable Local Complexity* ... 581

M. Thapar and B. Delagi  
*Scalable Cache Coherence for Large Shared Memory Multiprocessors* ................ 592
Concurrency Control

V. Issarny
*Design and Implementation of an Exception Handling Mechanism for Communicating Sequential Processes* .......................................................... 604

H-J. Plewan and P. Schlenk
*Creating and Controlling Concurrency in Object Oriented Systems - A Case Study* .................................................. 616

J. Rost and E. Maehle
*A Distributed Algorithm for Dynamic Task Scheduling* .......................................................... 628

Transputer Tools and Applications

J.-M. Adamo and Ch. Bonello
*TeNOR++: A Dynamic Configurer for SuperNode Machines* .................................................. 640

G. W. Chege, R. W. Taylor and J. M. Tealby
*Parallel Modelling of Electromagnetic Field Scattering: A New Approach Using the Edinburgh Concurrent Supercomputer Facility* .................................................. 652

G. J. Shaw, A. Stewart and L. C. Waring
*3D Multigrid Correction Methods for Transputer Networks* .................................................. 665

Cellular/Systolic Architectures and Algorithms

J. H. Goncalves Romero
*A Comparative Study of Two Wavefront Implementations of a LU Solver Algorithm* .................................................. 672

S. G. Sedukhin
*Systolic Array Architecture for Two-Dimensional Discrete Fourier Transform* ............... 682

A. Zsótér, T. Legendi and G. Balázs
*Design and Implementation of M1 Cellprocessor* .................................................. 692

Implementation Issues for Novel Architectures and Languages

H. Garsden and A. L. Wendelborn
*A Comparison of Microtasking Implementations of the Applicative Language SISAL* .................................................. 697

Guang R. Gao, H. H. J. Hum and Yue-Bong Wong
*An Efficient Scheme for Fine-Grain Software Pipelining* .................................................. 709

D. H. Grit
*Sisal on a Message Passing Architecture* .................................................. 721

The TOPSYS Tool Environment

Th. Bemmerl
*The TOPSYS Architecture* .................................................. 732
Th. Bemmerl and Th. Ludwig
MMK - A Distributed Operating System Kernel with Integrated Dynamic Loadbalancing ................................................................. 744

Th. Bemmerl, R. Lindhof and Th. Treml
The Distributed Monitor System of TOPSYS .................................. 756

Array Processors and Applications
M. Clint, J. S. Weston and C. W. Bleakney
Hybrid Algorithms for the Eigensolution of Large Sparse Symmetric Matrices on the AMT DAP 510 ........................................... 766

P. Flanders
Virtual Systems Architecture on the AMT DAP ................................ 774

M. Schäfer
Numerical Simulation of Thermal Convection on SIMD Computers ....... 786

High-Performance Systems and Accelerators
M. Makhaniok, V. Cherniavsky, R. Männer and O. Stucky
Massively Parallel Realization of Logical Operations in Distributed Parallel Systems ................................................................. 796

N. N. Mirenkov
High-Performance Computer System "SIBERIA" .............................. 806

M. Ward, P. Townsend and G. Watzlawik
EDS Hardware Architecture ............................................................... 816

Visualization and Runtime Analysis
F. Abstreiter
Visualizing and Analysing the Runtime Behavior of Parallel Programs .... 828

Th. Bemmerl, O. Hansen and Th. Ludwig
PATOP for Performance Tuning of Parallel Programs ....................... 840

S. Sharma
Real-Time Visualization of Concurrent Processes ............................. 852

Algorithmic Studies for Hypercube-Type Systems
M. Cosnard and J-L. Philippe
Achieving Superlinear Speedups for the Multiple Polynomial Quadratic Sieve Factoring Algorithm on a Distributed Memory Multiprocessor .... 863

M. Cosnard and P. Fraigniaud
A Performance Analysis of Network Topologies in Finding the Roots of a Polynomial ............................................................... 875

M. Vajteršic
Parallel Multigrid Algorithms for some Specialized Computer Systems .... 887
