# Table of Contents

<b>1. Introduction</b>	1
<b>2. Notation and results</b>	
2.1 Notation	3
2.2 Strategy of the study	6
2.3 Outgoing solutions	12
2.4 Translation operators	14
2.5 Main theorems	16
2.6 Integral representation of the solution	19
2.7 Asymptotics of the diffracted wave in the fluid	22
<b>3. The spectral function</b>	
3.1 The integral system for the spectral function	27
3.2 The equations solid-fluid coupled by a plane surface	33
3.3 Some properties of the operators $DM$ and $TM$	41
3.4 Decomposition of the spectral function	50
3.5 The functional equation for the spectral function	53
<b>4. Proofs of the results</b>	
4.1 An isomorphism theorem	57
4.2 Proof of Theorem 1. Existence and uniqueness of the spectral function	74
4.3 Proof of Theorem 2. Structure of the spectral function	75
<b>5. Numerical algorithm</b>	
5.1 Introduction	79
5.2 The case of an incident wave in the fluid	80
5.3 The case of an incident Scholte-Stoneley wave	81
5.4 Approximation of the regular part of the spectral function	85
5.5 Computation of the spectral function	90
5.6 Practical issues	91

**6. Numerical results**

6.1 Introduction .....	97
6.2 Presentation of the results .....	100
6.3 Iterates generated by the recursive formula .....	103
6.4 Numerical accuracy of the direct evaluation .....	104
6.5 Numerical diagrams of diffraction .....	104

<b>Appendix</b> .....	127
-----------------------	-----

<b>Subject Index</b> .....	129
----------------------------	-----

<b>References</b> .....	133
-------------------------	-----

*Acknowledgements.* This work is greatly indebted to B. Poirée, physicist at the D.R.E.T. for his support, advice and his deep knowledge in acoustic. We gratefully acknowledge also F. Duclos (L.A.U.E., Université du Havre, URA 1373) and M. de Billy (G.P.S., Université Paris VI, UMR 7588) for many interesting discussions. We do not forget J. Laminie (Laboratoire d'Analyse Numérique, Université Paris XI, URA 760) for the support during the years of the numerical work.
