FOREWORD

This is the first volume of the Proceedings of the Euler International Mathematical Institute in St.Petersburg. Springer-Verlag has kindly agreed to incorporate these Proceedings in the format of the Lecture Notes in Mathematics.

Due to a variety of circumstances the first Semester of the Institute, in the fall of 1990, was not fully fledged. Instead of a combined research effort it was organized in the form of short workshops. So this volume contains the results of individual authors, brought to the attention of the participants, rather than the outcome of joint work carried out within the walls of the Institute. This will be changed as soon as the Institute begins to work in full strength.

I hope that the results obtained at the Euler Institute will interest the international mathematical community, so that our publications will become an important part of the Lecture Notes in Mathematics. I would like to thank Springer-Verlag for their invaluable help and good will.

Director of EIMI

L. Faddeev

PREFACE

The Euler International Mathematical Institute in Leningrad was founded with the aim of enhancing contacts of Soviet and foreign mathematicians and to create opportunities for them to meet during two or three month periods to discuss current problems and carry out research within the mathematical topic chosen for this period.

The first semester (Fall 1990) was devoted to quantum groups, in view of the growing interest to this subject manifested by mathematicians of various specializations. Organizational questions combined with the desire to bring together as many participants as possible determined the structure of the first semester which was divided into three workshops:

1. Quantum groups, deformation theory and representation theory (15–28 October 1990);
2. Quantum groups, symmetries of dynamical systems and conformal field theory (12–25 November 1990);
3. Quantum groups, low-dimensional topology and link invariants (2–15 December 1990).

Each workshop was attended by approximately 15 Soviet mathematicians and 15 colleagues from Europe, Japan and the U.S.. All participants gave one-hour talks most of which are included in these Proceedings. According to the topical division, the contributions are grouped into three sections whose titles coincide with the titles of the workshops. The talks were delivered in the mornings, and in the afternoons some informal seminars were devoted mainly to detailed discussions of the problems mentioned in the talks. In particular, during the first workshop there was a seminar on unsolved problems in quantum groups. Some of these problems are published in Chapter 4 of these Proceedings. Many interesting problems are enounced also in the contributed papers; indeed one of the papers carries the title “On some unsolved problems in quantum group theory”.

From the topics of the workshops and the titles of the contributions it is clear that quantum groups and quantum Lie algebras draw the attention of mathematicians from quite different fields, including topology, algebra and analysis. These concepts are also actively exploited in modern theoretical physics. It may be interesting to note that almost all conferences on mathematical and theoretical physics, from high energy to solid state physics, planned for this summer (1991) include a section on quantum groups.

The organizers of the first semester of the Euler International Mathematical Institute hope that the contributions of actively working experts in quantum groups collected in these Proceedings will influence the rapid development of this field.

TABLE OF CONTENTS

Foreword	V
Preface	VII
I. Quantum Groups, Deformation Theory and Representation Theory	
V.G.Drinfeld	1
<i>On Some Unsolved Problems in Quantum Group Theory</i>	
M.Gerstenhaber, A.Giaquinto and S.D.Schack	9
<i>Quantum Symmetry</i>	
D.Gurevich and V.Rubtsov	47
<i>Yang-Baxter Equation and Deformation of Associative and Lie Algebras</i>	
L.I.Korogodsky and L.L.Vaksman	56
<i>Quantum G-Spaces and Heisenberg Algebra</i>	
V.Lyubashenko	67
<i>Real and Imaginary Forms of Quantum Groups</i>	
S.Majid	79
<i>Rank of Quantum Groups and Braided Groups in Dual Form</i>	
M.L.Nazarov	90
<i>Yangians of the "strange" Lie Superalgebras</i>	
M.Noumi and K.Mimachi	98
<i>Askey-Wilson Polynomials as Spherical Functions on $SU_q(2)$</i>	
G.I.Olshanskiĭ	104
<i>Twisted Yangians and Infinite-Dimensional Classical Lie Algebras</i>	

J.Stasheff	120
<i>Differential Graded Lie Algebras, Quasi-Hopf Algebras and Higher Homotopy Algebras</i>	
E.J.Taft	138
<i>Quantum Deformation of the Flag Variety</i>	
K.Ueno and T.Takebayashi	142
<i>Zonal Spherical Functions on Quantum Symmetric Spaces and Macdonald's Symmetric Polynomials</i>	
II. Quantum Groups, Symmetries of Dynamical Systems and Conformal Field Theory	
A.Yu.Alekseev, L.D.Faddeev and M.A.Semenov-Tian-Shansky	148
<i>Hidden Quantum Groups inside Kac-Moody Algebras</i>	
O.Babelon	159
<i>Liouville Theory on the Lattice and Universal Exchange Algebra for Bloch Waves</i>	
D.Bernard and A.Leclair	176
<i>Non-Local Currents in 2D QFT: An Alternative to the Quantum Inverse Scattering Method</i>	
L.C.Biedenharn and M.A.Lohe	197
<i>Induced Representations and Tensor Operators for Quantum Groups</i>	
H.W.Braden, E.Corrigan, P.E.Dorey and R.Sasaki	210
<i>Affine Toda Field Theory: S-Matrix vs Perturbation</i>	
E.Celeghini, R.Giachetti, E.Sorace and M.Tarlini	221
<i>Contractions of Quantum Groups</i>	
M.-L.Ge	245
<i>New Solutions of Yang-Baxter Equations and Quantum Group Structures</i>	
J.-L.Gervais	259
<i>Quantum Group Symmetry of 2D Gravity</i>	

L.K.Hadjiivanov, R.R.Paunov and I.T.Todorov	277
<i>Extended Chiral Conformal Theories with a Quantum Symmetry</i>	
A.Kuniba and T.Nakanishi	303
<i>Fusion RSOS Models and Rational Coset Models</i>	
F.W.Nijhoff, V.G.Papageorgiou and H.W.Capel	312
<i>Integrable Time-Discrete Systems: Lattices and Mappings</i>	
S.Zakrzewski	326
<i>On Relations between Poisson Groups and Quantum Groups</i>	
III. Quantum Groups, Low-Dimensional Topology and Link Invariants	
S.V.Kerov	335
<i>Characters of Hecke and Birman-Wenzl Algebras</i>	
T.Kohno	341
<i>Invariants of 3-Manifolds Based on Conformal Field Theory and Heegaard Splitting</i>	
J.Murakami	350
<i>The Multi-Variable Alexander Polynomial and a One-Parameter Family of Representations of $U_q(\mathfrak{sl}(2, \mathbb{C}))$ at $q^2 = -1$</i>	
A.B.Sossinsky	354
<i>Preparation Theorems for Isotopy Invariants of Links in 3-Manifolds</i>	
V.Turaev	363
<i>Quantum Invariants of 3-Manifold and a Glimpse of Shadow Topology</i>	
O.Viro	367
<i>Moves of Triangulations of a PL-Manifold</i>	
M.Wadati, T.Deguchi and Y.Akutsu	373
<i>Yang-Baxter Relation, Exactly Solvable Models and Link Polynomials</i>	

IV. Open Problems in Quantum Group Theory

S.V.Kerov	389
<i>Triangularity of Transition Matrices for Generalised Hall-Littlewood Polynomials</i>	
S.Majid	391
<i>An Open Problem in Quantum Groups</i>	
Ya.S.Soibelman	393
<i>Two Problems in Quantized Algebras of Functions</i>	
E.J.Taft	394
<i>Unsolved Problems</i>	
A.M.Vershik	395
<i>On Classification of \mathbb{Z}-graded Lie Algebras of Constant Growth which have Algebra $\mathbb{C}[h]$ as Cartan Subalgebra</i>	
List of Participants	397
