Preface

CONCUR'93 is the fourth in an annual series of conferences devoted to the study of concurrency. It is a sequel of CONCUR'90 and CONCUR'91, both held in Amsterdam (The Netherlands), and CONCUR'92, held in New York (USA). The basic aim of the CONCUR conferences is to communicate advances in concurrency theories and applications.

This volume contains 31 papers that have been selected from 113 submissions; four invited papers and two abstracts of invited talks are also included. The members of the program committee and their subreferees have carefully read the submitted papers and selected the collection that is presented in this volume during a meticulous evaluation process. I would like to express my gratitude to them for their painstaking and valuable work.

I would also like to thank the organising committee for their efforts in arranging the conference, and Hildesheim University for hosting CONCUR'93.

Support for CONCUR'93 has generously been provided by the Deutsche Forschungsgemeinschaft and the Ministerium für Wissenschaft und Kultur des Landes Niedersachsen. The conference has also been supported by the Commission of the European Communities (Esprit Basic Research), SUN Microsystems, IBM, Technologietransferstelle der Universität Hildesheim, Stadtsparkasse Hildesheim, Pfeffer Bürotechnik and Frings & Kuschners. The National Science Foundation has supported the conference by providing a number of travel grants for US academic researchers and graduate students.

Table of Contents

Invited Talk: Gérard Boudol
The lambda-calculus with multiplicities (extended abstract) .................. 1

Joost Engelfriet
A multiset semantics for the pi-calculus with replication .................... 7

Mads Dam
Model checking mobile processes ............................................. 22

Glenn Bruns
A practical technique for process abstraction ................................ 37

Maarten Fokkinga, Mannes Poel, Job Zwiers
Modular completeness for communication closed layers ..................... 50

Rob J. van Glabbeek
The linear time - branching time spectrum II
(The semantics of sequential systems with silent moves) .................. 66

Vladimiro Sassone, Mogens Nielsen, Glynn Winskel
A classification of models for concurrency .................................. 82

Luca Aceto, David Murphy
On the ill-timed but well-caused .......................................... 97

Roberto M. Amadio
On the reduction of chocs bisimulation to π-calculus bisimulation ...... 112

Davide Sangiorgi
A theory of bisimulation for the π-calculus .................................. 127

Søren Christensen, Yoram Hirshfeld, Faron Møller
Bisimulation equivalence is decidable for basic parallel processes ...... 143

Invited Talk: Cliff B. Jones
A pi-calculus semantics for an object-based design notation ............. 158

K.V.S. Prasad
Programming with broadcasts ................................................. 173

Uno Holmer
Interpreting broadcast communication in SCCS ........................... 188
Matthew Hennessy, Huimin Lin
Proof systems for message-passing process algebras .............................. 202

Michael J. Butler
Refinement and decomposition of value-passing action systems .............. 217

Invited Talk: Pierre Wolper, Patrice Godefroid
Partial-order methods for temporal verification .................................. 233

Ole Høgh Jensen, Christian Jeppesen, Jarl Tuxen Lang, Kim G. Larsen
Model construction for implicit specifications in modal logic ................ 247

Orna Bernholtz, Orna Grumberg
Branching time temporal logic and amorphous tree automata .................. 262

Jeremy Gunawardena
A generalized event structure for the Muller unfolding of a safe net ........ 278

Eric Goubault
Domains of higher-dimensional automata ........................................ 293

Invited Talk: Jos C.M. Baeten, Jan A. Bergstra
Non interleaving process algebra .................................................. 308

Roberto Segala
Quiescence, fairness, testing, and the notion of implementation .............. 324

Rob T. Udink, Joost N. Kok
Two fully abstract models for UNITY ........................................... 339

Shengzong Zhou, Rob Gerth, Ruurd Kuiper
Transformations preserving properties and properties preserved by
transformations in fair transition systems ..................................... 353

Marija Ćubrić, Prakash Panangaden
Minimal memory schedules for dataflow networks .............................. 368

Robert Kim Yates
Networks of real-time processes .................................................. 384

Invited Talk: Christian Lengauer
Loop parallelization in the polytope model ...................................... 398
Patrice Brémond-Grégoire, Insup Lee, Richard Gerber
ACSR: An algebra of communicating shared resources with
dense time and priorities .............................................. 417

Willem Jan Fokkink
An elimination theorem for regular behaviours with integration .......... 432

Bart Vergauwen, Johan Lewi
A linear local model checking algorithm for CTL ...................... 447

P.W. Hoogers, H.C.M. Kleijn, P.S. Thiagarajan
Local event structures and Petri nets ................................ 462

Jos C.M. Baeten, Chris Verhoef
A congruence theorem for structured operational semantics with
predicates ............................................................. 477

Flemming Nielson, Hanne Rüis Nielson
From CML to process algebras ........................................ 493

Kohei Honda
Types for dyadic interaction ........................................... 509

Vasco T. Vasconcelos, Kohei Honda
Principal typing schemes in a polyadic π-calculus ...................... 524

Invited Talk: Bard Bloom
Structured operational semantics for process algebras and
equational axiom systems (abstract) .................................. 539
